## DOCUMENTS REVIEWED

ABR, Inc. and CH2M HILL 2003. *2002 Sediment Quality Monitoring Program, Chena River Aquatic Assessment Fort Wainwright, Alaska*. April

Alaska Department of Environmental Conservation (ADEC) 1997. *Memorandum of Understanding Regarding Groundwater Sampling at the Fort Wainwright Landfill*. August 22

ADEC 2012. *Vapor Intrusion Guidance for Contaminated Sites*. Division of Spill Prevention and Response, Contaminated Sites Program

ADEC 2014. *18 AAC75, Oil and Other Hazardous Substances Pollution Control*. October

CH2M HILL 2002. *2002 Sediment Quality Monitoring Program, Chena River Aquatic Assessment, Fort Wainwright, Alaska*.

CH2M HILL 2003a. *CLOSES Evaluation Coal Storage Yard Fort Wainwright, Alaska*. Prepared for U.S. Army, Directorate of Public Works. May

CH2M HILL 2003b. *CLOSES Evaluation Building 1168*. Fort Wainwright, Alaska. August

CH2M HILL 2004a. *Documentation of Operable Unit 3 FEFLOW Model Fort Wainwright, Alaska*. February

CH2M HILL 2004b. *CLOSES Evaluation DRMO Yard Fort Wainwright, Alaska*. March

CH2M HILL 2004c. *CLOSES Evaluation 801 Drum Burial Site Fort Wainwright, Alaska*. April

CH2M HILL 2004d. *Birch Hill Conceptual Model Evaluation Fort Wainwright, Alaska*. April

CH2M HILL 2004e. *CLOSES Evaluation North Post Fort Wainwright, Alaska*. June

CH2M HILL 2004f. *CLOSES Evaluation Milepost 2.7 Fort Wainwright, Alaska*. June

CH2M HILL 2010a. *July 2012 Soil Gas and Ambient Air Sampling Results and Evaluation, Former Communications Site (Taku Gardens)*. September 25

CH2M HILL 2010b. *Remedial Investigation, 102 Former Communications Site*. December

CH2M HILL 2010c. *Remedial Investigation FWA 102 Former Communications Site, Fort Wainwright, Alaska*. December

CH2M HILL 2011. *Feasibility Study Former Communications Site Fort Wainwright, Alaska*. May

U.S. Department of Defense (DoD) 2012. *Department of Defense Manual Number 4715.20, Defense Environmental Restoration Program (DERP) Management*. March 9

DoD 2014. *Memorandum regarding Five-Year Review Procedures – Update to DoD Manual (DoDM) 4715.20, “Defense Environmental Restoration Program (DERP) Management”*.

March 9

Ecology and Environment, Inc. (E&E) 1994a. *Remedial Investigation Report Operable Unit 4 Fort Wainwright, Alaska*. Prepared for U.S. Army Corps of Engineers Alaska District and U.S. Department of Army. August

E&E 1994b. *Final Risk Assessment Report Operable Unit 4 Fort Wainwright, Alaska*. Prepared for U.S. Army Corps of Engineers Alaska District and U.S. Department of Army. August

E&E 1994c. *Remedial Investigation Report Operable Unit 3 Fort Wainwright, Alaska*. September

E&E 1994d. *Risk Assessment Report Operable Unit 3 Fort Wainwright, Alaska*. September

E&E 1995a. *Feasibility Study Operable Unit 3 Fort Wainwright, Alaska*. April

E&E 1995b. *Remedial Investigation Report Operable Unit 4 Fort Wainwright, Alaska*. August

E&E 1995c. *Final Risk Assessment Report Operable Unit 4 Fort Wainwright, Alaska*. August

E&E 1995d. *Feasibility Study Report Operable Unit 4 Fort Wainwright, Alaska, Final Report*. November

ENSR 1996. *Remedial Investigation Report Operable Unit 1 Fort Wainwright, Alaska*. September

ENSR 1997. *Feasibility Study Operable Unit 1 Fort Wainwright, Alaska*. February

ENSR 2000. *Operations, Maintenance, and Monitoring Manual 801 Drum Burial Site Operable Unit 1 Fort Wainwright, Alaska*.

Fairbanks Environmental Services, Inc. (FES) 2011a. *2010 Assessment Report, Underground Injection Control Assessment of Leach Field Soils and Groundwater at the Golf Course Maintenance Facility, Ski Hill Maintenance Facility, and Landfill CAT Shed, Fort Wainwright, Alaska*. March

FES 2011b. *2010 Monitoring Report Groundwater Monitoring 801 Drum Burial Site Operable Unit 1. ADEC File No. 108.38.068.08 Fort Wainwright, Alaska*. March

FES 2011c. *Decommissioning of Operable Unit 5 Treatment Systems – WQFS Source Area and Horizontal Well Operable Unit 5 Fort Wainwright, Alaska*. October

FES 2012a. *Monitoring Well Survey and GIS Update for U.S. Army Garrison – Fort Wainwright*. February

- FES 2012b. *2012 Work Plan Addendum, Decommissioning of the AS/SVE Treatment Systems, OU 3, Draft.* April
- FES 2012c. *2011 Monitoring Report Operable Unit 2 Fort Wainwright, Alaska.* May
- FES 2012d. *2011 Monitoring Report Operable Unit 5 Fort Wainwright, Alaska.* May
- FES 2012e. *2011 Monitoring Well Decommissioning Technical Memorandum, Operable Unit 3, Operable Unit 5 and Two Party Sites.* July
- FES 2013a. *2012 Monitoring Report Neely Road Building 3570, Former PX Gas Station, FTWW-101, ADEC File No. 108.38.078 (3570) Fort Wainwright, Alaska.* March
- FES 2013b. *Technical Memorandum Decommissioning of Operable Unit 3 Treatment Systems Fort Wainwright, Alaska.* March
- FES 2013c. *2012 Monitoring Report Former Buildings 2111 and 2112 Fort Wainwright, Alaska.* April
- FES 2013d. *2012 Monitoring Report Operable Unit 2 Fort Wainwright, Alaska.* April
- FES 2013e. *2012 Monitoring Report Operable Unit 5 Fort Wainwright, Alaska.* April
- FES 2013f. *2012 Monitoring Report Operable Unit 3 Fort Wainwright, Alaska.* May

**Decision Document Summaries**

**[This page intentionally left blank]**

**Table A3-1 Decision Document Summary**  
**Component: Background/Basis for Taking Action**  
**Operable Unit 1 - 801-Drum Burial Site**

Decision Document Title:	Record of Decision for Operable Unit 1 fort Wainwright Fairbanks, Alaska, June 1997
Regulatory Framework:	CERCLA NPL
Remedy Chosen:	Alternative 4 - Drum Removal and Disposal, and Natural Attenuation of Groundwater with Long-Term Groundwater Monitoring/Evaluation with Institutional Controls with a Contingency for Soil Vapor Extraction and Air Sparging to Treat Soil and Groundwater. (Page 7-1)
Media of Concern:	Groundwater and soil
Contaminants of Concern (COCs):	<p><u>Groundwater:</u> 1,1-dichloroethene (DCE), benzene, vinyl chloride, aldrin, dieldrin, and diesel range organics (DRO)</p> <p><u>Soil:</u> Aldrin, dieldrin, and DRO</p>
Land Use:	<p><u>Current:</u> Recreational</p> <p><u>Future:</u> Recreational</p>
Receptors:	Army personnel (residential), small mammals (e.g., shrews and voles)
Exposure Pathway:	Inhalation, ingestion, dermal contact
Ecological Risk:	<ul style="list-style-type: none"> <li>• Potential ecological risks may result from exposure of terrestrial wildlife to chemicals of potential ecological concern found in the surface soils at the 801 Drum Burial Site.</li> <li>• Potential ecological risk may result from exposure of aquatic organisms to chemicals of potential ecological concern found in surface water and sediment.</li> </ul>

**[This page intentionally left blank]**

**Table A3-2 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 1 - 801 Drum Burial Site**

Decision Document Title:	Record of Decision for Operable Unit 1 fort Wainwright Fairbanks, Alaska, June 1997
Remedy Chosen:	Alternative 4 - Drum Removal and Disposal, and Natural Attenuation of Groundwater with Long-Term Groundwater Monitoring/Evaluation with Institutional Controls with a Contingency for Soil Vapor Extraction and Air Sparging to Treat Soil and Groundwater. (Page 7-1)
Remedial Action Objectives (RAOs):	<p><u>Groundwater:</u></p> <ul style="list-style-type: none"> <li>• Ensure that groundwater quality at the 801 Drum Burial Site meets Federal and state standards</li> <li>• Minimize potential migration of contaminated groundwater to the Chena River and downgradient drinking water wells</li> <li>• Establish and maintain institutional controls (ICs) to ensure that the groundwater will not be used until Federal and state maximum contaminant levels (MCLs) are attained, except for activities undertaken to initiate the selected remedies</li> </ul> <p><u>Soil:</u></p> <ul style="list-style-type: none"> <li>• Prevent further leaching of contaminants from soil to groundwater</li> <li>• Reduce risks associated with exposure to contaminated soil and drums</li> <li>• Prevent migration of soil contaminants to groundwater which could result in groundwater contamination and exceedances of federal MCLs and Alaska Water Quality Standards (AWQS) (18 Alaska Administrative Code [AAC] 70)</li> </ul>
Clean-Up Goals:	<p><u>Groundwater:</u></p> <p>Five contaminants of concern (COCs) were established for groundwater in the ROD: aldrin, dieldrin, 1,1-DCE, benzene, and vinyl chloride. When available, federal and State of Alaska drinking water MCLs were adopted as the groundwater cleanup goals. At the time of the Record of Decision (ROD), MCLs were available and used for 1,1-DCE, benzene, and vinyl chloride. There were no MCLs for aldrin or dieldrin and the cleanup levels for these COCs were risk-based concentrations equivalent to an excess lifetime cancer risks of <math>1 \times 10^{-6}</math> for residential exposure scenarios. Since the ROD was finalized, groundwater cleanup levels for aldrin and dieldrin have been instituted. The MCLs for 1,1-DCE, benzene, and vinyl chloride have not changed, but the new MCLs for aldrin and dieldrin (18AAC Table C) are an order of magnitude higher than the risk-based levels adopted in the ROD. In addition, the USEPA has requested that cis-1,2-DCE be added to the list of compounds to track at the site.</p> <p><u>Soil:</u></p> <p>Two COCs were established for soils in the ROD; aldrin and dieldrin. Since there were no cleanup levels for either contaminant at the time of the ROD, soil cleanup goals were established based on calculated excess lifetime cancer risks</p>

**Table A3-2 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 1 - 801 Drum Burial Site**

	of $1 \times 10^{-4}$ for a residential exposure scenario. Since the ROD was finalized, soil cleanup levels for aldrin and dieldrin have been established. The new cleanup levels for aldrin and dieldrin are lower than the risk-based levels adopted in the ROD.
Applicable or Relevant and Appropriate Requirements:	<ul style="list-style-type: none"> <li>• Federal and State of Alaska MCLs - relevant and appropriate for groundwater</li> <li>• National Contingency Plan (NCP) off-site disposal rules - applicable for disposal of drums and contaminated soil</li> </ul>
Components of the Remedy:	<ul style="list-style-type: none"> <li>• <u>Source Removal</u>: Locate potential buried drums and, if found, remove and dispose the drums and contaminated soils, while restricting access to the source area during this work</li> <li>• <u>Monitored natural attenuation (MNA)/Long-term monitoring</u>: Natural attenuation of groundwater with long-term monitoring/evaluation</li> <li>• <u>Air Sparging/Soil Vapor Extraction (AS/SVE)</u>: install and operate an AS/SVE system to treat volatile organic compounds (VOCs); to be implemented if the plume shows an increasing trend over any three consecutive sampling events, or if designated monitoring points indicate the plume is migrating.</li> <li>• <u>ICs</u>: Establish and maintain ICs to ensure that the groundwater will not be used until Federal and state MCLs are attained, except for activities undertaken to initiate the selected remedies. Included are restrictions on site access, well installation and development as long as hazardous substances remain on site that preclude unrestricted use.</li> </ul>

**Table A3-3 Decision Document Summary**  
**Component: Background/Basis for Taking Action**  
**Operable Unit 2 - Former Building 1168 Leach Well**

Decision Document Title:	Record of Decision for Operable Unit 2 Fort Wainwright Fairbanks, Alaska, January 1997
Regulatory Framework:	CERCLA NPL
Remedy Chosen:	Alternative 3: Soil Vapor Extraction, Groundwater Air Sparging, and Monitoring
Media of Concern:	Groundwater
Contaminants of Concern (COCs):	<u>Groundwater:</u> Benzene, trichloroethene (TCE), Tetrachloroethene (PCE), vinyl chloride, 1,1-DCE, and cis-1,2 DCE
Land Use:	<u>Current:</u> industrial; residential for groundwater <u>Future:</u> industrial; residential for groundwater
Receptors:	Army personnel (residential)
Exposure Pathway:	Groundwater ingestion, dermal contact, inhalation of VOCs
Ecological Risk:	None

**[This page intentionally left blank]**

**Table A3-4 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 2 - Former Building 1168 Leach Well**

Decision Document Title:	Record of Decision for Operable Unit 2 Fort Wainwright Fairbanks, Alaska, January 1997
Remedy Chosen:	Alternative 3: Soil Vapor Extraction, Groundwater Air Sparging, and Monitoring
Remedial Action Objectives (RAOs):	<p>The goal of the remedial action is to restore groundwater to its beneficial use as a drinking water aquifer and to remediate soil to State of Alaska clean-up levels for non- underground storage tank (UST) petroleum contaminated soil.</p> <p><u>Groundwater:</u></p> <ul style="list-style-type: none"> <li>• Restore groundwater to its beneficial use of drinking water quality within a reasonable time frame through source control</li> <li>• Reduce or prevent further migration of contaminated groundwater from the source areas</li> <li>• Prevent the use of groundwater containing contaminants at levels above Safe Drinking Water Act (SDWA) and AWQS</li> <li>• Using natural attenuation to attain AWQS (18 AAC 70) after reaching state and Federal MCLs</li> </ul> <p><u>Soil:</u></p> <ul style="list-style-type: none"> <li>• Prevent the migration of soil contaminants to groundwater, which could result in groundwater contamination and exceedances of state and Federal MCLs and AWQS (18 AAC 70). The ROD stated <i>“because soils contaminated with VOCs and petroleum-related compounds are acting as a continuing source of contamination to groundwater, the remedial action goal for in-situ soils is active remediation until contamination levels in groundwater are consistently below state and federal MCLs.”</i></li> </ul>
Clean-Up Goals:	<p>Clean-up goals were based on Federal and state ARARs.</p> <p><u>Groundwater:</u> Federal and State of Alaska drinking water MCLs for benzene, TCE, PCE, vinyl chloride, 1,1-DCE, and cis-1,2-DCE at the former Building 1168 Leach Well source area</p> <p><u>Soil:</u> The ROD stated that <i>“because soils contaminated with VOCs and petroleum-related compounds are acting as a continuing source of contamination to groundwater, the remedial action goal for in-situ soils is active remediation until contamination levels in groundwater are consistently below state and federal MCLs.”</i> The State of Alaska cleanup levels for non-UST petroleum contaminated soil were considered as a guideline for the treatment of in-situ soils at the former Building 1168 Leach Well source area. Table 7-2 of the ROD adopted Alaska Department of Environmental Conservation (ADEC) soil cleanup matrix Level A cleanup goals for DRO, gasoline range organics (GRO), benzene, and total benzene, toluene, ethylbenzene, and xylenes at this source area.</p>

**Table A3-4 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 2 - Former Building 1168 Leach Well**

Applicable or Relevant and Appropriate Requirements:	<ul style="list-style-type: none"> <li>• State and Federal MCLs – relevant and appropriate for groundwater</li> <li>• Alaska Water Quality Standards – applicable</li> <li>• Alaska Oil Pollution Regulations – applicable</li> <li>• Alaska Guidelines for Non-UST Petroleum Contaminated Soil – to be considered</li> </ul>
Components of the Remedy:	<p><u>SVE/AS</u>:</p> <ul style="list-style-type: none"> <li>• In-situ treatment of groundwater by AS to remove VOCs, thereby attaining state and Federal drinking water standards</li> <li>• In-situ treatment of soil by SVE to prevent contaminated soil from acting as an ongoing source of contamination to groundwater</li> <li>• Treatment system evaluation and modification as necessary to optimize effectiveness</li> <li>• Periodic monitoring and evaluation of air emissions from the SVE/AS system to meet air emission requirements</li> <li>• Periodic groundwater monitoring and off-gas measurements to determine attainment of RAOs</li> </ul> <p><u>MNA/long-term monitoring</u>: Achieve the AWQS through natural attenuation after active treatment attains state and Federal MCLs</p> <p><u>ICs</u>: Restrict site access and restrict well installation and development activities as long as hazardous substances remain on site at levels that preclude unrestricted use</p>

**Operable Unit 2 - DRMO Yard**

Decision Document Title:	Record of Decision for Operable Unit 2 Fort Wainwright Fairbanks, Alaska, January 1997
Regulatory Framework:	CERCLA NPL
Remedy Chosen:	Alternative 3: Soil Vapor Extraction, Groundwater Air Sparging, and Monitoring.
Media of Concern:	Groundwater
Contaminants of Concern (COCs):	<u>Groundwater:</u> Benzene, tetrachloroethene (PCE), TCE, vinyl chloride, 1,1-DCE, and cis-1,2-DCE
Land Use:	<u>Current:</u> industrial; residential for groundwater <u>Future:</u> industrial; residential for groundwater
Receptors:	Army personnel (residential)
Exposure Pathway:	Groundwater ingestion, dermal contact, inhalation of VOCs
Ecological Risk:	The results of the Ecological Risk Assessment for OU-2 indicate a potential for adverse effects to small terrestrial mammals (e.g., voles) at the DRMO Yard, reflecting ecologically significant concentrations of manganese and lead. These risks are associated with ingestion of soil and vegetation. These contaminants do not appear to be associated with historical source area activities and are consistent with regional background concentrations. Overall, there do not appear to be unacceptable potential ecological risks associated with the DRMO Yard source area.

**Component: Remedial Action**  
**Operable Unit 2 - DRMO Yard**

Decision Document Title:	Record of Decision for Operable Unit 2 Fort Wainwright Fairbanks, Alaska, January 1997
Remedy Chosen:	Alternative 3: Soil Vapor Extraction, Groundwater Air Sparging, and Monitoring.
Remedial Action Objectives (RAOs):	<p>The goal of the remedial action is to restore groundwater to its beneficial use as a drinking water aquifer and to remediate soil to State of Alaska cleanup levels for non-UST petroleum contaminated soil.</p> <p><u>Groundwater:</u></p> <ul style="list-style-type: none"> <li>• Restore groundwater to its beneficial use of drinking water quality within a reasonable time frame through source control</li> <li>• Reduce or prevent further migration of contaminated groundwater from the source areas</li> <li>• Prevent use of groundwater containing contaminants at levels above SWDA and State of Alaska Drinking Water Standard MCLs and AWQS</li> <li>• Use natural attenuation to attain AWQS (18 AAC 70) after reaching state and Federal MCLs</li> </ul> <p><u>Soil:</u></p> <ul style="list-style-type: none"> <li>• Prevent migration of soil contaminants to groundwater, which could result in groundwater contamination and exceedances of state and Federal MCLs and AWQS (18 AAC 70)</li> </ul>
Clean-Up Goals:	<p><u>Groundwater:</u> Federal and State of Alaska drinking water MCLs were adopted as cleanup goals for benzene, PCE, TCE, vinyl chloride, 1,1-DCE, and cis-1,2-DCE at the DRMO Yard source area.</p> <p><u>Soil:</u> ADEC soil cleanup matrix cleanup levels were adopted as preliminary remediation goals for DRO in the DRMO Yard source area.</p>
Applicable or Relevant and Appropriate Requirements:	<ul style="list-style-type: none"> <li>• Federal Safe Drinking Water Act (40 CFR 141) and Alaska Drinking Water Regulations (18 AAC 80): The MCL and non-zero MCL goals were established under the SDWA and are relevant and appropriate for groundwater that is a potential drinking water source.</li> <li>• AWQS (18 AAC 70): Alaska Water Quality Standards for Protection of Class (I)(A) Water Supply, Class (I)(R) Water Recreation, and Class (1) Aquatic Life and Wildlife (18 AAC 70) are applicable to both source areas. Many of the constituents of groundwater regulated by AWQS are identical to MCLs in Drinking Water Standards.</li> <li>• Alaska Oil Pollution Regulations (18 AAC 75): Alaska Oil Pollution Control Regulations, are applicable. Under these regulations, responsible parties are required to clean up oil or hazardous material releases. The Army anticipates achieving a cleanup level consistent with this regulation.</li> <li>• Alaska Regulations for Leaking Underground Storage Tanks (18 AAC 78):</li> </ul>

**Table A3-6 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 2 - DRMO Yard**

	<p>The State of Alaska has established cleanup requirements for petroleum-contaminated soils from leaking USTs to protect groundwater and are relevant and appropriate for the DRMO Yard.</p>
Components of the Remedy:	<p>The remedial action components specified for the DRMO source area included:</p> <p><u>SVE/AS</u>:</p> <ul style="list-style-type: none"><li>• In-situ treatment of groundwater via AS to remove VOCs</li><li>• In-situ treatment of soil via SVE to prevent contaminated soil from acting as an ongoing source of contamination to groundwater</li><li>• Treatment system evaluation and modification as necessary to optimize effectiveness</li><li>• Periodic monitoring and evaluation of air emissions from the AS/SVE system to meet air emission requirements</li><li>• Periodic groundwater monitoring and off-gas measurements to determine attainment of RAOs</li></ul> <p><u>MNA/long-term monitoring</u>: Achieve the AWQS through natural attenuation after active treatment attains state and federal MCLs.</p> <p><u>ICs</u>: Restrict site access and restrict well installation and development activities as long as hazardous substances remain on site at levels that preclude unrestricted use.</p>

**Table A3-7 Decision Document Summary**  
**Component: Background/Basis for Taking Action**  
**Operable Unit 3 - Remedial Area 1B Birch Hill Tank Farm**

Decision Document Title:	Record of Decision for Operable Unit 3 Fort Wainwright Fairbanks, Alaska, January 1996 Explanation of Significant Differences Operable Unit 3 Fort Wainwright Fairbanks, Alaska, September 2002
Regulatory Framework:	CERCLA NPL
Remedy Chosen:	Alternative 5 - soil vapor extraction and air sparging of groundwater.
Media of Concern:	Groundwater
Contaminants of Concern (COCs):	<u>Groundwater:</u> Benzene, toluene, ethylbenzene, 1,2-dibromoethane (EDB), 1,2-dichloroethane (DCA), 1,2,4-trimethylbenzene (TMB), and 1,3,5-TMB
Land Use:	<u>Current:</u> industrial; surrounding areas are industrial, recreational and residential <u>Future:</u> industrial; surrounding areas will be industrial, recreational and residential
Receptors:	Army personnel (residential), downgradient users (two churches), and users of the Class A municipal drinking water wells
Exposure Pathway:	Ingestion, inhalation
Ecological Risk:	Results of the Ecological Risk Assessment (ERA) did indicate potential effects to wildlife because of 5 COCs at the Tank Farm: 1) lead, 2) 1,2,4-TMB, 3) 1,3,5-TMB, 4) isopropylbenzene, and 5) toluene. Lead posed potential risks to all terrestrial biota except the red fox, while the other four contaminants posed potential risks only to the red squirrel and marten, which are unlikely to inhabit the Tank Farm Source Area. Consequently, the only potentially significant risks at OU-3 are because of wildlife exposure to lead in soils at the Tank Farm. However, given the conservative nature of the ERA, these potential risks are likely to be overestimated. (pg 83)

**Table A3-8 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 3 - Remedial Area 1B Birch Hill Tank Farm**

Decision Document Title:	Record of Decision for Operable Unit 3 Fort Wainwright Fairbanks, Alaska, January 1996  Explanation of Significant Differences Operable Unit 3 Fort Wainwright Fairbanks, Alaska, September 2002
Remedy Chosen:	Alternative 5 - soil vapor extraction and air sparging of groundwater.
Remedial Action Objectives (RAOs):	<p><u>Groundwater:</u></p> <ul style="list-style-type: none"> <li>• Restore groundwater to drinking water quality within a reasonable time frame</li> <li>• Reduce further migration of contaminated groundwater</li> <li>• Prevent use of groundwater with contaminants at levels above SDWA levels</li> </ul> <p><u>Soil:</u></p> <ul style="list-style-type: none"> <li>• Prevent the migration of contaminants from soil into groundwater that would result in groundwater contamination and exceedance of SDWA standards</li> </ul>
Clean-Up Goals:	<p><u>Groundwater:</u></p> <ul style="list-style-type: none"> <li>• Federal and State of Alaska drinking water MCLs were adopted as groundwater cleanup goals for benzene, toluene, ethylbenzene, EDB, and DCA</li> <li>• The concentrations corresponding to an excess cancer risk-based level of <math>1 \times 10^{-4}</math> were adopted as the cleanup goals for 1,2,4-TMB and 1,3,5-TMB because there were no MCLs for these contaminants</li> <li>• Although the ROD did not identify specific groundwater cleanup goals for petroleum hydrocarbons, the AWQS and other applicable Alaska environmental regulations are referenced as ARARs. The ROD stated that active remediation would be used to achieve SDWA levels and that natural attenuation would be used to achieve AWQS and other State of Alaska groundwater cleanup levels including DRO and GRO concentrations.</li> </ul> <p><u>Soil:</u></p> <ul style="list-style-type: none"> <li>• The remedial action goal for <i>in-situ</i> soils contaminated with VOCs and petroleum compounds is protection of groundwater. The ROD stated that since soils are acting as a continuing source of contamination to the groundwater, active remediation of the soils will continue until SDWA levels are consistently met. AWQS will be achieved through natural attenuation. The ROD also stated that petroleum-contaminated soils that are treated <i>ex-situ</i> will be treated to State of Alaska Matrix Level A standards before they are returned to the source area.</li> </ul>

**Table A3-8 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 3 - Remedial Area 1B Birch Hill Tank Farm**

Applicable or Relevant and Appropriate Requirements:	<ul style="list-style-type: none"><li>• Federal and State of Alaska MCLs – relevant and appropriate for groundwater</li><li>• Alaska Water Quality Standards – applicable</li><li>• Alaska Oil Pollution regulations – applicable</li><li>• Alaska regulations for leaking USTs – relevant and appropriate.</li></ul>
Components of the Remedy:	<ul style="list-style-type: none"><li>• <u>AS/SVE</u>: SVE of petroleum-contaminated soil and AS of petroleum-contaminated groundwater in permafrost-free areas at known contaminant sources and at locations where remedial action goals were exceeded to achieve SDWA levels.</li><li>• <u>Product recovery</u>: During the summer and fall of 2000 a product recovery system was installed on Birch Hill. This sub-area was not a part of the OU3 ROD, but was established as part of an Explanation of Significant Differences (ESD). The ESD also required the implementation of groundwater modeling.</li><li>• <u>MNA/long-term monitoring</u>: long term groundwater monitoring and natural attenuation to meet the AWQS.</li><li>• <u>ICs</u>: restrict access and restrict development at the site as long as hazardous substances remain at concentrations above the remedial action goals. The development restrictions apply to construction and well development or placement as long as hazardous substances remain on site at levels that preclude unrestricted use, excluding activities undertaken to initiate the remedial actions.</li></ul>

	<p>acting as a continuing source of contamination to the groundwater, active remediation of the soils will continue until SDWA levels are consistently met. Natural attenuation will continue until AWQS are achieved.</p> <ul style="list-style-type: none"> <li>• Petroleum contaminated soils that are treated ex-situ will be treated to State of Alaska Matrix Level A standards before they are returned to the source area.</li> </ul>
Applicable or Relevant and Appropriate Requirements:	<ul style="list-style-type: none"> <li>• Federal and State of Alaska MCLs – Relevant and appropriate for groundwater</li> <li>• Alaska Water Quality Standards – Applicable</li> <li>• Alaska Oil Pollution regulations – Applicable</li> <li>• Alaska regulations for leaking USTs – Relevant and appropriate</li> </ul>
Components of the Remedy:	<p><u>AS/SVE</u>: of contaminated soil and groundwater in permafrost-free areas.</p> <p><u>Long-term monitoring</u>: The ROD also specified that long-term groundwater monitoring would be conducted at the three sites to ensure that contaminant concentrations were reduced in nearby wetlands. In addition, ICs would be maintained to restrict access to and development at the sites as long as hazardous substances remain onsite at levels that precluded unrestricted use.</p> <p><u>ESD</u>: the following actions/changes that were not anticipated at the time of the ROD, but are required pursuant to the ESD. Many of these actions were completed prior to development of the ESD:</p> <ul style="list-style-type: none"> <li>• Excavation of contaminated soils from Milepost 2.7 (1,500 cubic yards) and Milepost 3.0 (6,000 cubic yards) and treatment in the vicinity of the Truck Fill Stand and Building 1173 treatment systems.</li> <li>• Treatment of contaminated soil from Milepost sites 2.7 and 3.0 in treatment cells to achieve ADEC Level A cleanup levels and soil disposal criteria required for placement in Fort Wainwright's on-Post solid waste landfill or to achieve applicable off-Post soil disposal criteria, as determined appropriate by the Army.</li> <li>• Monitoring of soil and groundwater contamination remaining in the vicinity of Remedial Area 3, for as long as required until RAOs have been achieved, as determined by concurrence of the project managers.</li> </ul> <p>Installation of additional monitoring wells and site characterization at Milepost 2.7 and 3.0 to gain a better understanding of local hydrology, impacts of permafrost, and contaminant migration.</p>

**Table A3-13 Decision Document Summary**  
**Component: Background/Basis for Taking Action**  
**Operable Unit 4 - Landfill**

Decision Document Title:	Record of Decision for Operable Unit 4 Fort Wainwright Fairbanks, Alaska, August 1996
Regulatory Framework:	CERCLA NPL
Remedy Chosen:	<b>Alternative 3:</b> A phased approach involving capping of the soils in the older, inactive portion of the landfill, natural attenuation of groundwater; groundwater monitoring/evaluation; and institutional controls. Phase 2, if necessary, would involve evaluation and implementation of an active groundwater treatment system.  (ROD Section 7.1, page 94 and Section 5.5.1.3, page 74)
Media of Concern:	Groundwater
Contaminants of Concern (COCs):	Benzene, cis-1,2-DCE, 1,1,2,2-Tetrachloroethane (PCA), 1,1,2-TCA, TCE, vinyl chloride, and bis(2-Ethylhexyl)phthalate
Land Use:	<u>Current:</u> industrial <u>Future:</u> industrial (ROD Section 4.0, page 40); residential for groundwater use (ROD Section 4.4, page 44)
Receptors:	Residential (groundwater use) (ROD Section 4.4, page 44 and Table 4-2)
Exposure Pathway:	Ingestion and dermal contact of groundwater, inhalation of indoor vapors that originate from groundwater (ROD Table 4-2)
Ecological Risk:	Insignificant per ROD Section 4.6.3.2, page 48:  <i>“Barium poses potential risks to passerine birds (robins, sparrows, etc.) at the Landfill....through the ingestion of soil and earthworms. However, these locations represent a relatively small habitat area....the Landfill [is an] industrial area with a significant amount of heavy equipment and human activity. The habitat area in these locations has been significantly altered from the surrounding land. The actual number of animals that could be affected by these chemicals could be very low. No significant effects were predicted for waterfowl (mallards), raptors (kestrels), or terrestrial vegetation. No potential effects were predicted for aquatic species. There do not appear to be unacceptable potential ecological risks associated with the Landfill or CSY source areas.”</i>

**[This page intentionally left blank]**

**Table A3-14 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 4 - Landfill**

Decision Document Title:	Record of Decision for Operable Unit 4 Fort Wainwright Fairbanks, Alaska, August 1996
Remedy Chosen:	<p><b>Alternative 3:</b> A phased approach involving capping of the soils in the older, inactive portion of the landfill, natural attenuation of groundwater; groundwater monitoring/evaluation; and institutional controls. Phase 2, if necessary, would involve evaluation and implementation of an active groundwater treatment system.</p> <p>(ROD Section 7.1, page 94 and Section 5.5.1.3, page 74)</p>
Remedial Action Objectives (RAOs):	<ul style="list-style-type: none"> <li>• Restore groundwater to its beneficial use of drinking water quality within a reasonable timeframe</li> <li>• Reduce or prevent further migration of contaminated groundwater from the source areas</li> <li>• Prevent use of groundwater containing contaminants above Federal MCLs and AWQS (18 AAC 70)</li> <li>• Use natural attenuation to attain AWQS (18 AAC 70)</li> </ul> <p>(ROD Section 5.2.1, page 70)</p>
Clean-Up Goals:	<p><b>Groundwater:</b> Federal and State of Alaska maximum contaminant levels (MCLs) for all COCs except 1,1,2,2-PCA; USEPA Region 3 Risk-Based Concentration (RBC) for 1,1,2,2-PCA.</p> <p>(ROD Table 5-1, page 82 and Table 7-1, page 97)</p>
Applicable or Relevant and Appropriate Requirements:	<p><b>Chemical-specific:</b></p> <ul style="list-style-type: none"> <li>• SDWA (40 CFR 141) and Alaska Drinking Water Regulation (18 AAC 80)</li> <li>• AWQS (18 AAC 70) for Protection of Class (1)(A) Water Supply, Class (1)(B) Water Recreation, and Class (1) Aquatic Life and Wildlife</li> <li>• Alaska Oil Pollution Regulation (18 AAC 75)</li> <li>• Alaska Solid Waste Management Regulations (18 AAC 60)</li> </ul> <p><b>Location-specific:</b></p> <ul style="list-style-type: none"> <li>• Clean Water Act Section 404 (40 CFR 230 and 33 CFR 320 – 330)</li> </ul> <p><b>Action-specific</b></p> <ul style="list-style-type: none"> <li>• RCRA Solid Waste Landfill Closure Criteria (40 CFR 258.60)</li> <li>• Federal Clean Air Act (42 USC 7401)</li> </ul> <p>(ROD Sections 8.22, 8.23, and 8.24, pages 101 – 102)</p>

**Table A3-14 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 4 - Landfill**

Components of the Remedy:	<p><b>Landfill:</b></p> <ul style="list-style-type: none"><li>• Capping with a minimum of 2 feet of native soil of the approximately 8 acres of the inactive portion of the Landfill to achieve a permeability no greater than <math>10^{-5}</math> centimeters per second</li><li>• Maintain vegetative growth or grasses [on the cap] and promote natural drainage to prevent ponding and erosion</li></ul> <p><b>Contingent Remedy:</b></p> <ul style="list-style-type: none"><li>• The need for a gas collection system would be considered during remedial design. [The landfill cap remedial design did not include a methane gas collection system]</li><li>• An active groundwater treatment system would be considered if natural attenuation of groundwater did not progress as projected (70 years to achieve the RAOs) or did not result in a significant reduction in leachate</li></ul> <p><b>Groundwater:</b></p> <ul style="list-style-type: none"><li>• Achieve the RAOs for this source area through natural attenuation</li><li>• Monitor groundwater downgradient of the landfill and evaluate results to determine the effectiveness of the capping and natural attenuation with respect to the RAOs</li></ul> <p><b>Land Use Controls:</b></p> <ul style="list-style-type: none"><li>• Maintaining institutional controls restricting access to and development at the site as long as hazardous substances remain onsite at levels that precluded unrestricted use</li></ul> <p>(ROD Section 7.1.1, page 94)</p>

Remedy Chosen:	<b>Alternative 6:</b> In situ treatment of soils via vacuum extraction enhanced by steam injection or bioventing, in situ treatment of groundwater via air sparging, groundwater monitoring/evaluation, and institutional controls (ROD Section 7.2, page 95 and Section 5.5.2.6, page 80)
Remedial Action Objectives (RAOs):	<p><b>Groundwater:</b></p> <ul style="list-style-type: none"> <li>• Restore groundwater to its beneficial use of drinking water quality within a reasonable time frame</li> <li>• Reduce further migration of contaminated groundwater from the source areas</li> <li>• Prevent use of groundwater containing contaminants at levels above Federal MCLs and AWQS (18 AAC 70)</li> <li>• Use natural attenuation to attain AWQS (18 AAC 70)</li> </ul> <p><b>Soil:</b></p> <ul style="list-style-type: none"> <li>• Prevent migration of soil contaminants to groundwater that could result in groundwater contamination and exceedances of Federal MCLs and AWQS (18 AAC 70)</li> </ul> <p>(ROD Section 5.2.2, pages 70-71)</p>
Clean-Up Goals:	<p><b>Groundwater:</b> Federal and State of Alaska MCLs (ROD Table 5-2, page 84 and Table 7-2, page 98)</p> <p><b>Soil:</b> (ROD Table 5-2, page 85 and Table 7-2, page 99)</p>
Applicable or Relevant and Appropriate Requirements:	<p><b>Chemical-specific:</b></p> <ul style="list-style-type: none"> <li>• SDWA (40 CFR 141) and Alaska Drinking Water Regulation (18 AAC 80)</li> <li>• AWQS (18 AAC 70) for Protection of Class (1)(A) Water Supply, Class (1)(B) Water Recreation, and Class (1) Aquatic Life and Wildlife</li> <li>• Alaska Oil Pollution Regulation (18 AAC 75)</li> <li>• Alaska Regulations for Leaking Underground Storage Tanks (18 AAC 78)</li> </ul> <p><b>Location-specific:</b></p> <ul style="list-style-type: none"> <li>• Clean Water Act Section 404 (40 CFR 230 and 33 CFR 320 – 330)</li> </ul> <p><b>Action-specific:</b></p> <ul style="list-style-type: none"> <li>• Federal Clean Air Act (42 USC 7401)</li> </ul> <p><b>To-be-considered:</b></p>

**Table A3-16 Decision Document Summary**  
**Component: Remedial Action**  
**Operable Unit 4 – Coal Storage Yard**

	<ul style="list-style-type: none"> <li>• State of Alaska Guidance for Storage, Remediation, and Disposal of Non-UST Petroleum Contaminated Soils (July 29, 1991)</li> <li>• State of Alaska Interim Guidance for Surface and Groundwater Cleanup Levels (September 26, 1990)</li> </ul> <p>(ROD Sections 8.22, 8.23, and 8.24, pages 101 – 102)</p>
Components of the Remedy:	<p><b>Soil and Groundwater:</b></p> <ul style="list-style-type: none"> <li>• In situ treatment of soils via soil vapor extraction to prevent contaminated soils from acting as an ongoing source of contamination to groundwater. Soil vapor extraction wells will be placed in areas of the highest contamination and operated until groundwater MCLs are achieved</li> <li>• In situ treatment of groundwater via air sparging to remove VOCs, thereby attaining state and Federal drinking water standards. Air sparging wells will be placed in areas of highest contamination.</li> <li>• Evaluate and modify the treatment system as necessary to optimize effectiveness in achieving RAOs</li> <li>• Duration of treatment system operation is estimated to be nine years to meet ADEC soil cleanup goals and Federal MCLs. A combination of groundwater monitoring and off-gas measurements will be used to determine attainment of [the] RAOs</li> <li>• After active treatment achieves [the] MCLs, natural attenuation will be relied on to achieve [the] AWQS</li> <li>• Monitoring of nested downgradient wells to ensure protection of Post drinking water supply wells during remedial action</li> </ul> <p><b>LUCs:</b></p> <ul style="list-style-type: none"> <li>• Maintain institutional controls, including restricted access and well development restrictions, as long as hazardous substances remain on site at levels that preclude unrestricted use. Restrictions on groundwater will be implemented until contaminant levels are below Federal MCLs and [the] AWQS.</li> </ul> <p>(ROD Section 7.2.1, page 95)</p>

**Table A3-17 Decision Document Summary**  
**Component: Background/Basis for Taking Action**  
**Operable Unit 5 - WQFS**

Decision Document Title:	Record of Decision for Operable Unit 5 Fort Wainwright Fairbanks, Alaska, May 1999
Regulatory Framework:	CERCLA NPL
Remedy Chosen:	<p><u>Subarea WQFS1</u>: Alternative 5: Alternative 4 with Operation of the Potential Downgradient Groundwater Air Sparging Trench.</p> <p><u>Subarea WQFS2</u>: Alternative 3: Hot spot (source area) treatment with AS/SVE, continued operation of at downgradient groundwater AS curtain, groundwater monitoring, ICs, and MNA.</p> <p><u>Subarea WQFS3</u>: Alternative 3: Hot spot (source area) treatment with AS/SVE, ICs, groundwater monitoring, and MNA.</p>
Media of Concern:	<p><u>WQFS</u>: Groundwater, soil</p> <p><u>Chena River</u>: surface water</p>
Contaminants of Concern (COCs):	<p><u>WQFS</u>:</p> <p>Groundwater: 1,2-DCA, benzene, toluene, DRO, GRO, and RRO</p> <p>Soil: DRO, GRO, Benzene, Ethylbenzene, Toluene, Xylenes</p> <p><u>Surface Water</u>:</p> <p>Total aromatic hydrocarbons (TAH) and total aqueous hydrocarbons (TaqH)</p>
Land Use:	<p><u>Current</u>: industrial and recreational. Groundwater use: residential</p> <p><u>Future</u>: industrial and recreational. Groundwater use: residential</p>
Receptors:	Army personnel
Exposure Pathway:	Inhalation of dust, ingestion
Ecological Risk:	<p>COPCs identified for ecological receptors are listed in Table 8 of the ROD. Mammalian indicator species selected for WQFS and EQFS include the meadow vole (exposure pathways include ingestion of plants and ingestion of soil) and the muskrat (exposure pathways include ingestion of aquatic plants, ingestion of sediment, and ingestion of surface water). Aquatic indicators selected for WQFS and EQFS include benthic invertebrates (exposure pathways include exposure to sediment and surface water). The post-wide ecological risk assessment identified the red fox as an indicator species to represent terrestrial receptors because it is omnivorous and, therefore, is more likely to bioaccumulate chemicals than herbivores whose diets consist of plants. Bioaccumulation factors for animals generally are higher than plant uptake.</p>

**Table A3-21 Decision Document Summary**  
**Component: Background/Basis for Taking Action**  
**Operable Unit 5 – Remedial Area 1A Birch Hill Above Ground Storage Tanks**

Decision Document Title:	Record of Decision for Operable Unit 5 Fort Wainwright Fairbanks, Alaska, May 1999
Regulatory Framework:	CERCLA NPL
Remedy Chosen:	Alternative 2 – Institutional Controls
Media of Concern:	Soil, Groundwater, Surface Water
Contaminants of Concern (COCs):	<u>Soil</u> : Lead (2-party: petroleum hydrocarbons)
Land Use:	<u>Current</u> : industrial, residential (groundwater) <u>Future</u> : industrial, residential (groundwater)
Receptors:	Army personnel
Exposure Pathway:	Inhalation of dust, ingestion
Ecological Risk:	Potential risks from exposure to lead and petroleum hydrocarbons exist for all terrestrial receptors at Remedial Area 1A. However, the source area does not provide suitable habitat for any species because of the presence of existing facilities and human disturbance in the area. Potential receptors would be expected to avoid Remedial Area 1A and preferentially use habitat with less disturbance. Habitat outside the source areas has not been affected. Therefore, Remedial Area 1A is expected to constitute only a portion of the range of ecological receptors and a significant portion of their diet would be obtained from outside the source areas.

<b>D. General</b>			
1.	<b>Vandalism/trespassing</b> <span style="margin-left: 20px;"><input type="checkbox"/> Location shown on site map</span> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> No vandalism evident</span> Remarks: <u>Some debris (cardboard boxes, etc.) observed on site indicating site access is occurring.</u>		
2.	<b>Land use changes on site</b> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> N/A</span> Remarks: _____ _____		
3.	<b>Land use changes off site</b> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> N/A</span> Remarks: _____ _____		
<b>VI. GENERAL SITE CONDITIONS</b>			
<b>A. Roads</b> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> Applicable</span> <span style="margin-left: 20px;"><input type="checkbox"/> N/A</span>			
1.	<b>Roads damaged</b> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> Location shown on site map</span> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> Roads adequate</span> <span style="float: right;"><input type="checkbox"/> N/A</span> Remarks: _____ _____		
<b>B. Other Site Conditions</b>			
Remarks: _____ _____			
<b>VII. LANDFILL COVERS</b> <span style="margin-left: 20px;"><input type="checkbox"/> Applicable</span> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> N/A</span>			
<b>VIII. VERTICAL BARRIER WALLS</b> <span style="margin-left: 20px;"><input type="checkbox"/> Applicable</span> <span style="margin-left: 20px;"><input checked="" type="checkbox"/> N/A</span>			

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-1

<b>IX. GROUNDWATER/SURFACE WATER REMEDIES</b> <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
<b>A. Groundwater Extraction Wells, Pumps, and Pipelines</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>B. Surface Water Collection Structures, Pumps, and Pipelines</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>C. Treatment System</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>D. Monitoring Data</b>		<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	Monitoring Data <input checked="" type="checkbox"/> Is routinely submitted on time <input type="checkbox"/> Is of acceptable quality		
2.	Monitoring data suggests: <input type="checkbox"/> Groundwater plume is effectively contained <input checked="" type="checkbox"/> Contaminant concentrations are declining		
<b>E. Monitored Natural Attenuation</b>		<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	<b>Monitoring Wells</b> (natural attenuation remedy) <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input checked="" type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks : _____ _____		
<b>X. OTHER REMEDIES</b>			
If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction.  Remarks : _____			
<b>XI. OVERALL OBSERVATIONS</b>			
<b>A. Implementation of the Remedy</b>			
<p>Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).</p> <p><u>The remedy was established to: 1) ensure that groundwater contamination at the site meets federal and state standards, 2) minimize the potential for migration of contaminated groundwater to the Chena River and to downgradient drinking water wells, 3) establish and maintain ICs to ensure that groundwater will not be used until MCLs are attained, 4) prevent leaching of contaminants from soil to groundwater, and 5) reduce risks associated with exposure to contaminated soil and drums. The remedy was implemented, it consisted of: 1) locating and removing buried drums, establishing ICs to ensure that groundwater would not be used until MCLs are attained, 3) natural attenuation and long-term monitoring of groundwater, and 4) AS/SVE (contingent remedy) if the contaminant concentrations show an increasing trend over three consecutive sampling events and 2) data indicates that the groundwater contamination is attenuating, albeit at a slow rate, and the plumes are stable. The remedy is functioning as intended by the ROD.</u></p>			

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-1

<b>B.</b>	<b>Adequacy of O&amp;M</b>
<p>Describe issues and observations related to the implementation and scope of O&amp;M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.</p> <p><u>O&amp;M consists of monitoring well inspections and maintenance (if necessary). All wells were found to be in satisfactory condition.</u></p>	
<b>C.</b>	<b>Early Indicators of Potential Remedy Problems</b>
<p>Describe issues and observations such as unexpected changes in the cost or scope of O&amp;M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future.</p> <p><u>No early indicators of potential remedy problems were identified.</u></p>	
<b>D.</b>	<b>Opportunities for Optimization</b>
<p>Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy.</p> <p><u>Opportunities for optimization were not identified.</u></p>

<b>C. Treatment System</b>	<input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A
<b>D. Monitoring Data</b>	<input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A
1. Monitoring Data <input checked="" type="checkbox"/> Is routinely submitted on time <input checked="" type="checkbox"/> Is of acceptable quality	
2. Monitoring data suggests: <input checked="" type="checkbox"/> Groundwater plumes are effectively contained <input checked="" type="checkbox"/> Contaminant concentrations are declining	
<b>E. Monitored Natural Attenuation</b> <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
1. <b>Monitoring Wells</b> (natural attenuation remedy) <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input checked="" type="checkbox"/> All required wells located <input checked="" type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks : <u>Monitoring wells in the vicinity of the DRMO yard observed damaged due to frost heaving.</u>	
<b>X. OTHER REMEDIES</b>	
If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction.  Remarks : <u>AS/SVE systems previously operated at each site and have been shut down.</u>	
<b>XI. OVERALL OBSERVATIONS</b>	
<b>A. Implementation of the Remedy</b>	
Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).  <u>The remedies for each site were established to: 1) restore groundwater to its beneficial use of drinking water quality within a reasonable time frame through source control, 2) reduce or prevent further migration of contaminants from source areas, 3) prevent the use of groundwater containing contaminants above MCLs, 4) use natural attenuation to attain Alaska Water Quality Standards after the MCLs are met, and 5) prevent the migration of soil contaminants to groundwater. The remedies were implemented and consisted of: 1) operating AS/SVE systems, 2) in-situ chemical oxidation (ISCO) (1168 Leach well site) and in-situ chemical reduction (DRMO Yard) treatability studies, 3) groundwater monitoring, and 4) implementing ICs. The remedies are functioning as intended by the ROD. At the Building 1168 Leach well site groundwater concentrations since the ISCO process indicate that COCs have consistently been below the cleanup goals. At the DRMO Yard, groundwater contamination plumes are stable or decreasing and PCE concentrations continue to exceed the MCL in several wells sampled. The remedial actions have prevented further migration of contaminated groundwater from source areas.</u>	
<b>B. Adequacy of O&amp;M</b>	
Describe issues and observations related to the implementation and scope of O&M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.  <u>O&amp;M consists of monitoring well inspections and maintenance (if necessary) at each site.</u>	

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-2 Sites

<b>C. Early Indicators of Potential Remedy Problems</b>
Describe issues and observations such as unexpected changes in the cost or scope of O&M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future. <u>No early indicators of potential remedy problems were identified.</u>
<b>D. Opportunities for Optimization</b>
Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy. <u>Opportunities for optimization were not identified.</u>

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-3 Sites

<b>IX. GROUNDWATER/SURFACE WATER REMEDIES</b> <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
<b>A. Groundwater Extraction Wells, Pumps, and Pipelines</b>	<input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A
<b>B. Surface Water Collection Structures, Pumps, and Pipelines</b>	<input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A
<b>C. Treatment System</b>	<input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A
<b>D. Monitoring Data</b>	<input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A
1. Monitoring Data <input checked="" type="checkbox"/> Is routinely submitted on time <input checked="" type="checkbox"/> Is of acceptable quality	
2. Monitoring data suggests: <input checked="" type="checkbox"/> Groundwater plume is effectively contained <input type="checkbox"/> Contaminant concentrations are declining	
<b>E. Monitored Natural Attenuation</b> <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
1. <b>Monitoring Wells</b> (natural attenuation remedy) <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input type="checkbox"/> Good condition <input checked="" type="checkbox"/> All required wells located <input checked="" type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks : <u>Monitoring wells located at Remedial Areas 1B and 2 require maintenance due to frost heaving.</u>	
<b>X. OTHER REMEDIES</b>	
If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction. Remarks : <u>AS/SVE systems previously operated at the sites have been shut down.</u>	
<b>XI. OVERALL OBSERVATIONS</b>	
<b>A. Implementation of the Remedy</b>	
<p>Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).</p> <p><u>Remedies at each site were implemented to: 1) restore groundwater to drinking water quality within a reasonable timeframe, 2) reduce further migration of contaminated groundwater, 3) prevent use of groundwater with contaminants at levels above SDWA standards, and 4) prevent the migration of contaminants from soil to groundwater that would result in groundwater contamination and exceedance of SDWA standards. The remedies consisted of: 1) operating AS/SVE systems, 2) operating a dual-phase recovery system (Remedial Area 1B), 3) conducting an ISCO treatability study (Remedial Area 2), 4) injecting ORC into the groundwater (FEP Mileposts 2.7 and 3.0), 5) groundwater monitoring, and 6) implementing ICs. The remedies are functioning as intended by the ROD. At the Birch Hill Tank Farm, all COCs have attenuated to below the cleanup goals in the alluvial aquifer, in the alluvial and bedrock aquifers near the Truck Fill Stand, and in the alluvial and bedrock aquifers at the Thaw Channel Area. At the Valve Pits and ROLF, the remedies have been effective in removing COCs from the subsurface and substantially reducing groundwater contaminant source areas. Small areas of benzene contamination remain at Valve Pit A and at Former Building 1144. No recent COC exceedances have been identified at Valve Pit B, Valve Pit C, the Eight Car Header, and the Central Header. At FEP Mileposts 2.7 &amp; 3.0 the concentrations of benzene remain high and exhibit increasing trends in several wells. Analysis shows that groundwater cleanup goals will not be achieved for these areas within a reasonable period of time. ICs are in place at each site to ensure that groundwater will not be used until cleanup goals are achieved.</u></p>	

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-3 Sites

<b>B.</b>	<b>Adequacy of O&amp;M</b>
	<p>Describe issues and observations related to the implementation and scope of O&amp;M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.</p> <p><u>O&amp;M consists of monitoring well inspections and maintenance (if necessary) at each site.</u></p>
<b>C.</b>	<b>Early Indicators of Potential Remedy Problems</b>
	<p>Describe issues and observations such as unexpected changes in the cost or scope of O&amp;M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future.</p> <p><u>The concentrations of benzene remain high and exhibit increasing trends in several wells at the FEP Milepost 2.7 and 3.0 sites. A data gap investigation for this area is currently under contract with the U.S. Army. The inhalation pathway should not have been eliminated during development of the cleanup goals for trimethylbenzenes (TMBs) in the 2002 Explanation of Significant Differences. The 1994 baseline risk assessment clearly considered residential inhalation of volatiles from tap water to be a complete exposure pathway. The cleanup goals for 1,2,4-TMB and 1,3,5-TMB should be re-evaluated and re-established.</u></p>
<b>D.</b>	<b>Opportunities for Optimization</b>
	<p>Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy.</p> <p><u>The well inventory at Birch Hill Tank Farm should be incorporated, where necessary, into the attenuation monitoring program for the bedrock aquifer. An optimized alluvium and bedrock well array should be selected to monitor the attenuation of recalcitrant COCs so a remedy completion strategy can be defined. Opportunities for optimization were not identified at the Valve Pits, ROLF, and FEP Milepost 2.7 and 3.0 sites. Five-year reviews should be discontinued at the Building 1168 Leach Well Site.</u></p>

<b>B. Benches</b> <input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A  (Horizontally constructed mounds of earth placed across a steep landfill side slope to interrupt the slope in order to slow down the velocity of surface runoff and intercept and convey the runoff to a lined channel.)			

## Five-Year Review Site Inspection Checklist

### Fort Wainwright OU-4 Landfill and Coal Storage Yard

<b>C. Letdown Channels</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
(Channel lined with erosion control mats, riprap, grout bags, or gabions that descend down the steep side slope of the cover and will allow the runoff water collected by the benches to move off of the landfill cover without creating erosion gullies.)			
<b>D. Cover Penetrations</b>		<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	<b>Gas Vents</b>	<input type="checkbox"/> Active	<input type="checkbox"/> Passive
	<input type="checkbox"/> Properly secured/locked	<input type="checkbox"/> Functioning	<input type="checkbox"/> Routinely sampled
	<input type="checkbox"/> Evidence of leakage at penetration	<input type="checkbox"/> Needs Maintenance	<input type="checkbox"/> Good condition
	<input checked="" type="checkbox"/> N/A		
	Remarks _____		
2.	<b>Gas Monitoring Probes</b>	<input type="checkbox"/> Properly secured/locked	<input type="checkbox"/> Functioning
	<input type="checkbox"/> Evidence of leakage at penetration	<input type="checkbox"/> Routinely sampled	<input type="checkbox"/> Good condition
		<input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> N/A
	Remarks _____		
3.	<b>Monitoring Wells</b> (within surface area of landfill)	<input type="checkbox"/> Properly secured/locked	<input type="checkbox"/> Functioning
	<input type="checkbox"/> Evidence of leakage at penetration	<input type="checkbox"/> Routinely sampled	<input type="checkbox"/> Good condition
		<input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> N/A
	Remarks _____		
4.	<b>Leachate Extraction Wells</b>	<input type="checkbox"/> Properly secured/locked	<input type="checkbox"/> Functioning
	<input type="checkbox"/> Evidence of leakage at penetration	<input type="checkbox"/> Routinely sampled	<input type="checkbox"/> Good condition
		<input type="checkbox"/> Needs Maintenance	<input checked="" type="checkbox"/> N/A
	Remarks _____		
5.	<b>Settlement Monuments</b>	<input checked="" type="checkbox"/> Located	<input type="checkbox"/> Routinely surveyed
	Remarks <u>Survey records not located.</u>		
<b>E. Gas Collection and Treatment</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>F. Cover Drainage Layer</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
1.	<b>Outlet Pipes Inspected</b>	<input type="checkbox"/> Functioning	<input checked="" type="checkbox"/> N/A
	Remarks _____		
2.	<b>Outlet Rock Inspected</b>	<input type="checkbox"/> Functioning	<input checked="" type="checkbox"/> N/A
	Remarks _____		
<b>G. Detention/Sedimentation Ponds</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>H. Retaining Walls</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>I. Perimeter Ditches/Off-Site Discharge</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>VIII. VERTICAL BARRIER WALLS</b>			
		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-4 Landfill and Coal Storage Yard

<b>IX. GROUNDWATER/SURFACE WATER REMEDIES</b> <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
<b>A. Groundwater Extraction Wells, Pumps, and Pipelines</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>B. Surface Water Collection Structures, Pumps, and Pipelines</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>C. Treatment System</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>D. Monitoring Data</b>		<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	Monitoring Data <input checked="" type="checkbox"/> Is routinely submitted on time <input checked="" type="checkbox"/> Is of acceptable quality		
2.	Monitoring data suggests: <input checked="" type="checkbox"/> Groundwater plume is effectively contained <input type="checkbox"/> Contaminant concentrations are declining		
<b>E. Monitored Natural Attenuation</b>		<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	<b>Monitoring Wells</b> (natural attenuation remedy) <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input checked="" type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks : _____ _____		
<b>X. OTHER REMEDIES</b>			
If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction.  Remarks : <u>None</u>			
<b>XI. OVERALL OBSERVATIONS</b>			
<b>A. Implementation of the Remedy</b>			
Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).  <u>Remedies at each site were implemented to: 1) restore groundwater to its beneficial use of drinking water quality within a reasonable time frame, 2) reduce further migration of contaminated groundwater from the source area, 3) prevent use of groundwater containing contaminants at levels above federal MCLs and AWQS, and 4) use natural attenuation to attain AWQS. The landfill was capped, groundwater monitoring and ICs were implemented. Monitoring data indicates that remedy has reduced further migration of contaminated groundwater from the landfill site and prevented the use of groundwater containing contaminants above the site cleanup goals. Reductive dechlorination is occurring in site groundwater. It is too early to determine whether the remedy will restore groundwater to its beneficial use of drinking water quality. An AS/SVE system was operated at the Coal Storage Yard from 1997 to 2000. Groundwater monitoring was performed until COCs were not detected. Monitoring was discontinued in 2003. All RAOs identified in the Rod have been attained.</u>			
<b>B. Adequacy of O&amp;M</b>			
Describe issues and observations related to the implementation and scope of O&M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.  <u>The scope and implementation of O&amp;M procedures at the sites are adequate to assess current and long-term protectiveness of the remedies.</u>			

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-4 Landfill and Coal Storage Yard

<b>C.</b>	<b>Early Indicators of Potential Remedy Problems</b>
	<p>Describe issues and observations such as unexpected changes in the cost or scope of O&amp;M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future.</p> <p><u>None.</u></p>
<b>D.</b>	<b>Opportunities for Optimization</b>
	<p>Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy.</p> <p><u>The five-year review concurs with recommendations provided in the 2014 Annual Sampling Report (FES 2014h) for the landfill. No other opportunities for optimization were identified. Five-year reviews should be discontinued at the Coal Storage Yard site.</u></p>

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-5 Sites

<b>IX. GROUNDWATER/SURFACE WATER REMEDIES</b> <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
<b>A. Groundwater Extraction Wells, Pumps, and Pipelines</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>B. Surface Water Collection Structures, Pumps, and Pipelines</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A
<b>C. Treatment System</b>		<input type="checkbox"/> Applicable	<input checked="" type="checkbox"/> N/A (Treatment systems not operational)
<b>D. Monitoring Data</b>		<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	Monitoring Data <input checked="" type="checkbox"/> Is routinely submitted on time <input checked="" type="checkbox"/> Is of acceptable quality		
2.	Monitoring data suggests: <input type="checkbox"/> Groundwater plume is effectively contained <input type="checkbox"/> Contaminant concentrations are declining		
<b>E. Monitored Natural Attenuation</b>		<input checked="" type="checkbox"/> Applicable	<input type="checkbox"/> N/A
1.	<b>Monitoring Wells</b> (natural attenuation remedy) <input checked="" type="checkbox"/> Properly secured/locked <input checked="" type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input checked="" type="checkbox"/> Good condition <input checked="" type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks : _____		
<b>X. OTHER REMEDIES</b>			
If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction.  Remarks : <u>A boom was deployed in the Chena River.</u>			
<b>XI. OVERALL OBSERVATIONS</b>			
<b>A. Implementation of the Remedy</b>			
Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).  <u>Remedies were implemented at the WQFS and EQFS sites to: 1) restore groundwater to its beneficial use within a reasonable time frame, 2) reduce or prevent further migration of contaminated groundwater from source areas, 3) ensure that there is no risk to aquatic receptors through control of contaminant movement through groundwater to the Chena River, 4) remove LNAPL to the extent practicable to eliminate film or sheen from groundwater, 5) prevent use of groundwater containing contaminants above SDWA MCLs or AWQS, 6) prevent the migration of soil contaminants to groundwater at levels above SDWA, non-zero MCLGs, or AWQs, 7) reduce sources of contaminant releases to the Chena River, 8) Meet AWQS for the Chena River, 9) perform an aquatic assessment of the Chena River, 10) collect Chena River benthic macroinvertebrates for toxicological studies and bioassays, and 11) determine the reductions of contaminant load into the Chena River from the remedial actions and the associated changes to aquatic organisms. The remedies at these sites consisted of: 1) operating AS/SVE systems and an AS curtain (WQFS2), 2) seasonal deployment of a boom in the Chena River to collect sheen, 3) abandonment of fuel pipelines, 4) groundwater monitoring and natural attenuation, 5) implementing ICs.</u>			

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-5 Sites

<p><u>A remedy was implemented at the BHTF ASTs site to limit human health and terrestrial receptor exposure to lead contaminated soil. The remedy consisted of implementing ICs. In addition, excavation and disposal of lead contaminated soil will be performed after the ASTs are removed (milestone date is 2016). Groundwater contaminant levels at the WQFS remain above the cleanup goals and soil sampling data collected after active treatment indicates the presence of a smear zone that likely contributes to groundwater contamination. Groundwater monitoring in four areas known as Flowpaths A, B, C, and the Apple Street Hotspot has been discontinued because all groundwater cleanup goals have been attained. Groundwater at Flowpath D indicates that all COC concentrations have been attained, although a DRO exceedance was observed during the previous monitoring episode in 2010. An intermittent sheen continues to be observed on the Chena River. ICs are in place at all OU-5 sites and are functioning as intended. Treatment systems are not operated and monitoring is not performed at the OB/OD area.</u></p>
<p><b>B. Adequacy of O&amp;M</b></p> <p>Describe issues and observations related to the implementation and scope of O&amp;M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.</p> <p><u>O&amp;M activities at the WQFS sites consist of monitoring well inspections and maintenance (if necessary), and deployment and maintenance of the Chena River boom. O&amp;M activities at the EQFS sites consist of monitoring well inspections during the groundwater sampling events (every five years) and maintenance (if necessary). There are no O&amp;M activities associated with the OU-5 BHTF ASTs.</u></p>
<p><b>C. Early Indicators of Potential Remedy Problems</b></p> <p>Describe issues and observations such as unexpected changes in the cost or scope of O&amp;M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future.</p> <p><u>The Chena River boom was lifted off its supports in 2014 as a result of high water level. Measures should be implemented to prevent future displacement of the boom.</u></p>
<p><b>D. Opportunities for Optimization</b></p> <p>Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy.</p> <p><u>Opportunities for optimization were not identified.</u></p>

A4-33

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-6

Bob Hazlett, Environmental Scientist (USACE Alaska)			
<b>III. ON-SITE DOCUMENTS &amp; RECORDS VERIFIED</b> (Check all that apply)			
1.	<b>O&amp;M Documents</b> <input type="checkbox"/> O&M manual <input type="checkbox"/> As-built drawings <input type="checkbox"/> Maintenance logs Remarks: _____	<input type="checkbox"/> Readily available <input type="checkbox"/> Readily available <input type="checkbox"/> Readily available	<input type="checkbox"/> Up to date <input type="checkbox"/> Up to date <input type="checkbox"/> Up to date <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> N/A <input checked="" type="checkbox"/> N/A

<b>X. OTHER REMEDIES</b>			
If there are remedies applied at the site which are not covered above, attach an inspection sheet describing the physical nature and condition of any facility associated with the remedy. An example would be soil vapor extraction.  Remarks : _____			
<b>XI. OVERALL OBSERVATIONS</b>			
<b>A. Implementation of the Remedy</b>			
Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.).  <u>The remedy for OU-6 includes institutional controls to restrict excavation of soil and prohibit groundwater use and MNA. Groundwater monitoring will be used to assess the effectiveness of natural attenuation and the degradation processes and to track the extent of any contaminant migration; however, this component of the remedy has not yet been implemented. No intrusive activities were observed at OU-6 indicating that this portion of the remedy is effective and functioning as designed.</u>			

## Five-Year Review Site Inspection Checklist Fort Wainwright OU-6

<b>B.</b>	<b>Adequacy of O&amp;M</b>
<p>Describe issues and observations related to the implementation and scope of O&amp;M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy.</p> <p><u>O&amp;M procedures at OU-6 include sampling, monitoring and analysis of groundwater; IC inspections; routine maintenance; and, reporting. Groundwater monitoring work plans were recently approved by the USEPA and will be implemented in 2016. No groundwater monitoring was conducted from remedy selection in January 2014 to current (May 2016). Monitoring is an essential component of the remedy and should be conducted on a routine basis.</u></p> <p><u>Annual IC inspections and maintenance of the groundwater monitoring well network has been performed as required.</u></p>	
<b>C.</b>	<b>Early Indicators of Potential Remedy Problems</b>
<p>Describe issues and observations such as unexpected changes in the cost or scope of O&amp;M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future.</p> <p><u>No early indicators of potential remedy problems were identified.</u></p>	
<b>D.</b>	<b>Opportunities for Optimization</b>
<p>Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy.</p> <p><u>No opportunities for optimization were identified.</u></p>
