# HATE TRAFFIC?

COMMUTE ENHANCEMENT PILOT

The Federal Highway Administration (FHWA) is sponsoring a project that aims to pilot travel options that minimize congestion and better serve commuters. As part of this initiative, the Northern Virginia Regional Commission (NVRC) is partnering with Metropia, Inc. to provide the National Geospatial-Intelligence Agency (NGA) employees access to GoEzy, a mobility app powered by Artificial Intelligence (AI) that tailors suggestions to improve your commute.

The GoEzy app helps commuters like you find better ways to get around town by bringing all travel options together into one convenient app. Even better, it suggests ways to save time and money and avoid the stresses of traffic. **As part of the pilot, NGA has created a private carpool group within the app.**

- Improve your commutes to the office by finding alternative routes or mobility options.
- Discover cost-effective transportation options such as carpooling, bicycling, and transit lines tailored to your personal commute
- NGA's carpooling group allows you to find coworkers with a similar route and travel time so you can share a ride with someone you know and trust
- Log your work-at-home schedule through the app's unique Telework feature

BETTER DECISIONS

GoEzy gives drivers robust information regarding congestion and making better commute decisions.

REAL-TIME INFORMATION

GoEzy is powered by real-time data so you can find out if an incident or heavy traffic will impact an upcoming trip *before* you leave and during your trip.

Every Option

- Improved travel options and routes

- Transit planning and navigation

- Carpooling group

- Bicycle and pedestrian navigation

- Telework
