# COVID-19 Vaccine Update

## ***2 COVID-19 Vaccines are approved by the FDA for Emergency Use Authorization (EUA)***

- **Pfizer-BIONTECH** and **Moderna** (both mRNA vaccines)
  - Currently only the Pfizer COVID-19 vaccine is being administered at FBNC under EUA
  - 2-dose vaccine series given 21 days apart
  - Contains no preservatives or latex
  - Prior COVID-19 disease - vaccinate
  - Known SARS CoV-2 exposure - vaccinate
  - Current COVID-19 – delay vaccination (so as not to expose others)
  - Both doses are necessary for full protection (95% efficacy 1 week after 2nd dose)
  - Persons who have had an anaphylactic reaction to the 1st dose of a COVID-19 vaccine should not receive further doses.
  - An allergic reaction to any other vaccine or injectable therapy, or anaphylaxis for any cause, is a precaution to COVID-19 vaccination.
  - A history of an allergic, non-anaphylactic, reaction to a non-injectable medicine, food, latex, or pollen does not preclude receipt of a COVID-19 vaccine.
  - Pregnancy: Experts recommend that COVID-19 vaccines should not be withheld from pregnant individuals who meet criteria for vaccination.
  - Breastfeeding: Experts recommend that COVID-19 vaccines should be offered to lactating individuals similar to non-lactating individuals when they meet criteria for receipt of the vaccine.

# COVID-19 Vaccine Update

## ***Novavax Phase 3 FDA-regulated Investigational Vaccine Clinical Trial also ongoing at FBNC***

- Novavax Vaccine is a more traditional vaccine (protein subunit with a novel adjuvant)
- WAMC/FBNC chosen as 1 of 115 sites across the US for this clinical trial
- Additional vaccines are required to meet the global needs to combat COVID because no single vaccine is right for everyone
- The Novavax trial is a placebo-controlled trial, so enrollment will be focused on at-risk individuals who are not included in the “first waves” of distribution of EUA vaccines
- It is not anticipated that EUA vaccine doses will be available for the broad population in the US for several months. Thus, you may still want to participate in this trial, in which you have a 2 out of 3 chance to receive active vaccine immediately.
- Novavax has proposed to the FDA a modification to this trial design to provide the alternate study injections to all study participants after efficacy has been confirmed. This would be accomplished in what is called a “blinded crossover,” meaning that study participants who initially received placebo would receive active study vaccine, and those who initially received active vaccine would receive placebo.
- You may be eligible to participate if you are 18 years or older, an MHS/Tricare beneficiary, medically stable, and do not have a previous confirmed diagnosis of COVID-19
- If you join the clinical trial, you would be randomly assigned (by chance) to receive 2 separate injections into your upper arm (21 days apart) of either the investigational vaccine or placebo.
- Volunteers will be compensated for their participation.
