OIL WATER SEPARATOR

POSSIBLE AREAS OF CONCERN

Illegal dumping of pollutants

CHARACTERIZATION

Oil Water Separators (OWS) serve as the primary pretreatment device for treating wash water prior to being discharged into the wastewater collection system.

HANDLING PROCEDURES

Step 1 Wash racks may have drains that lead to oil water separator.

Step 2 Mud and grit from these drains should be removed and discarded at the **PPOC Support** contaminated soil building.

Step 3 Dumping of illegal pollutants down floor and wash rack drains is illegal.

NOTE: Vehicles **MUST NOT** be washed on Aircraft wash racks.

NOTE: Only use cleaners approved by **JACOBS** and provided by the PPOC when using unit wash racks.

Oil Water Separator at BLDG 7085

GENERAL INFORMATION

For additional information contact **JACOBS**. JACOBS has responsibility over oil water separators.
