

Java Application Developer | *remote, full-time*

Summary: The focus of this position is to work with internal teams to develop, deploy, and maintain Java applications. A well-rounded, proactive team member is needed to analyze customer needs and develop overall concepts and design objectives. Qualified candidates must have full stack development experience, including front end, middle tier, and database programming skills. The developer should be able to write functional code with a sharp eye for spotting defects. There will be many different team members to collaborate with. The developer should be able to communicate with both technical and non-technical teams.

We currently have several openings for Java developers including:

- Full stack developer, with focus on Web API programming skills
- Full stack developer, with focus on healthcare innovation
- Full stack developer, with focus on SQL development

Java Developers should have in-depth knowledge of Java development and ecosystems. They should remain up to date on current Java platform major and minor changes, security notices, and other related developments. Our Java experts are also expected to know how the agile development process works and how to transition between development and production environments.

Grow with Pivotal IT Services! Are you ready to find new ways to develop technology that encourages innovation and collaboration? Solving the industry's toughest problems requires skilled and diverse teams. At Pivotal, we are always looking for people who enjoy challenges to grow with our team. Our employees can choose to work in our private co-working suite in Raleigh, NC, or 100% remotely from their home. Pivotal, a young and growing woman-owned company, offers several career growth opportunities. We provide competitive compensation and benefits packages. Come grow with us!

Minimum Qualifications:

- Proficient in programming in Java
- Experience with JSP
- Experience with MS SQL Server/T-SQL
- Experience with Java web development using frameworks such as Spring, Struts, etc.
- Excellent communication skills, both written and oral, with the ability to communicate technical concepts to non-technical audiences and social aptitude to interact with clients
- Experience supporting a healthcare-related technology solution is preferred
- Military experienced candidates are encouraged to apply
- Candidates will need to obtain Security Clearance of Public Trust once hired

Duties and Responsibilities:

- Write clean, scalable code based on requirements and design
- Collaborate with internal teams to produce software design and architecture
- Unit Test and deploy applications and systems
- Improve existing software by revising, updating, and debugging code
- Develop documentation throughout the software development life cycle (SDLC)

Required Education: A Bachelor's Degree from an accredited college or university with a major in Computer Science or other related scientific or technical discipline or five (5) years of equivalent experience in a related field.
