III. REMEDIAL ACTION PLAN

A. Corrective Action Completed or In-Progress:

☐ Not Applicable

☒ Recovery/Removal of Free Product (Non-Aqueous Phase Hydrocarbons)

☐ Remediation/Treatment of Contaminated Soils

☐ Other (specify)

_____

_____

B. Objectives of Corrective Action:

☐ No Further Action

☒ Remove Free Product That Exceeds One-Eighth Inch

☐ Remediate Groundwater Contamination That Exceeds:

☐ Maximum Contaminant Levels (MCLs)

OR

☐ In-stream Water Quality Standards

B. Objectives of Corrective Action (CONTINUED):

☐ Remediate Soil Contamination That Exceeds:

☐ Threshold Values Listed In Table A

OR

☐ Threshold Values Listed In Table B

OR

☐ Alternate Threshold Levels (ATLs) (Reference CAP A App. I)

☒ Provide Risk-Based Corrective Action (Reference CAP B App. I):

☒ Remediate Soil and/or Groundwater Contamination That Exceeds Alternate Concentration Limits (ACLs) and Monitor Residual Contaminants

OR

☐ Monitor Soil and/or Groundwater Contamination That Exceeds Levels In Rule – 391-3-15-.09(3).

C. Design and Operation of Corrective Action Systems:

☒Soil ☒Groundwater ☒Free Product ☐Surface water ☐Not Applicable

D. Implementation (MUST INCLUDE THE FOLLOWING):

NOTE: If No Further Action is proposed and none of the following apply, a brief explanation must be provided with the signed Certificate of Completion.

- Milestone schedule for proposed site activities

- Inspection and preventive maintenance schedule for all specialized remediation equipment

AND / OR

Monitoring/sampling and reporting plan for measuring interim progress and project completion

- Plan to decommission equipment/wells and close site

PUBLIC NOTICE:

☐ Not Applicable **The Corrective Action Objectives submitted and approved under the CAP-Part A have not changed.**

☐ Certified Letters to Adjacent, Potentially Affected Property Owners and Local Officials

☒ Legal Notice in Newspaper, as approved by EPD

☐ Other EPD-approved Method (specify) _____

V. **CLAIM FOR REIMBURSEMENT** (For GUST Trust Fund sites only)

☒ Not Applicable (specify) _____

_____

☐ GUST Trust Fund Application - (attach if applicable)

☐ Cost Proposal:

☐ A Total of All Costs Incurred To Date (MUST INCLUDE THE FOLLOWING):

- ▶ Invoices and Proofs-of-Payment For All Costs Incurred To Date
- ▶ Invoices itemized on the GUST-4D
- ▶ All Non-Eligible Costs Clearly Identified as such
- ▶ Incurred Costs Itemized per GUST-92 form or EPD provided form/specifications

☐ A Total of Estimated Costs To Complete Corrective Action

- ▶ Estimated Costs Itemized per GUST-92 form or EPD provided form or specifications

☐ Total Project Costs

☐ Proposed Schedule For Reimbursement

☐ Lump Sum Payment Upon Completion Of Corrective Action

OR

☐ Interim Payments With Final Payment Upon Completion

OR

☐ EPD Established Payment Schedule

2. Site Investigation Report

Former Pumphouse #1 was an aviation-gas fuel island located along the east-west taxiway of Hunter Army Airfield (HAAF) (Figure 2-1) that was used from about 1953 until the early 1970s. It consisted of ten 25,000-gallon underground storage tanks (USTs) and a 50,000-gallon underground defueling tank. Former USTs 30 through 39 and 50 at former Pumphouse #1, Facility ID #9-025085 were located near former Building 8060 at HAAF (Figure 2-1). The pumphouse was inactive from the 1970s to 1995. Eight of the 25,000-gal USTs were removed in 1995. The 50,000-gallon defueling tank and two of the 25,000-gallon tanks remained in-place, partially under the pumphouse structure. In 1998, the pumphouse structure was removed, along with the two remaining 25,000-gallon USTs, and the 50,000-gallon defueling tank was closed in-place. The piping from the boundary of the pumphouse facility to the bulk fuel farm was also drained, pigged, and grouted in-place.

Various closure activities and Corrective Action Plan (CAP)–Part A and CAP–Part B investigations were performed at the former Pumphouse #1 site between 1995 and 2000 (Figure 2-2). The former Pumphouse #1 investigations covered an area south of the active taxiway. CAP–Part A and CAP–Part B investigations were conducted at the Departure/Arrival Air Control Group (DAACG) facility in 1995 and 1996, respectively. These investigations covered the active tarmac north of the active taxiway. Review of the analytical data from all of the investigations indicated that it was necessary to combine the DAACG facility data and the former Pumphouse #1 data to document the nature and extent of contamination. As a result, the former Pumphouse #1 CAP–Part B Report (Science Applications International Corporation [SAIC] 2000) combined the results of all the investigations into a single report, which was submitted to the Georgia Environmental Protection Division (GA EPD) in August 2000 and subsequently approved.

As indicated in the former Pumphouse #1 CAP–Part B Report, two distinct and separate plumes are located within the vicinity of the former Pumphouse #1 site. Release #1 is an area of soil and groundwater contamination located near the DAACG facility that is in the vicinity of former Fuel Pits 1A and 1B, located approximately 900 feet (ft) west of former Building 8060 (i.e., Pumphouse #1). Release #2 is an area of soil and groundwater contamination located near the former Pumphouse #1 facility and former Fuel Pits 1C and 1D, located approximately 200 ft north of the former Tank Pits. The Release 1 and Release 2 areas are presented in Figure 2-2. The corrective actions at Release #1 and Release #2 are being addressed separately.

For the former Fuel Pit 1A/DAACG area (Release #1), the CAP–Part B Report recommended additional investigation activities to further delineate the extent of free product. In May 2000, an interim action to remove the free product through the use of

absorbent socks was implemented. Upon completion of the additional investigation, a CAP–Part B Addendum #1 Report (SAIC 2002) was prepared and subsequently approved by GA EPD that recommended groundwater extraction and free product removal in a manner to cause minimal impact to the active flight operations.

The use of absorbent socks for free product removal at Release #1 was continued until July 2003. An additional investigation was conducted in 2003 to further delineate the horizontal and vertical extent of the free product in the subsurface at Release #1 and Release #2 using cone-penetrometer-technology (CPT) equipment with fluorescence detection. The results of the investigation were presented in the *Data Summary Report for the 2003 Free Product CPT Investigation at Former Pumphouse #1* (SAIC 2004) and were also included as an appendix in the *Third Annual Monitoring Only Report for Former Pumphouse #1* (SAIC 2005).

Due to funding limitations, the corrective action described in the CAP–Part B Addendum #1 was not implemented. However, in an effort to address the free product, the interim action to remove free product through the use of absorbent socks was implemented again in 2004. In 2005, the free product removal method was changed to bi-monthly vacuum extraction (VE) from numerous wells located throughout Release #1. In 2006, a CAP-Part B Addendum #2 was prepared and subsequently approved by GA EPD that recommended quarterly VE of free product at four wells for at least 8 hours and annual monitoring of 30 wells. In 2007, enhanced fluid recovery (EFR) of free product was performed on a quarterly basis. Free product recovery was not performed in 2008. Annual sampling was conducted in December 2007 and December 2008. Additional soil and groundwater samples were collected in January 2008. The results of the 2008 investigation and monitoring activities are included within this report.

This Revised CAP–Part B Report is being submitted to the GA EPD Underground Storage Tank Management Program (USTMP) to present the 2008 investigation and sampling results and to change the remedial approach for the former Fuel Pit 1A/DAACG area (Release #1).

2.1 Regional, Local, and Site Hydrogeology

A discussion of the regional, local, and site hydrogeology was presented in previous CAP–Part B Reports and is summarized below.

2.1.1 Groundwater Usage

According to the *Groundwater Pollution Susceptibility Map of Georgia* (GA EPD 1992), the former Pumphouse #1 site, Facility ID #9-025085 is located within an average or higher groundwater pollution susceptibility area. Nine water supply wells are located within the confines of the HAAF area. These wells are installed in the

deeper Floridan limestone aquifer and have the potential to provide up to 3,890 gallons per minute (gpm) of water to occupants of the HAAF installation (SAIC 2006a). Impacts at Pumphouse #1 are confined to the shallow surficial aquifer, which is separated from the Floridan by a thick regional aquitard, the Hawthorne Group.

2.1.2 Aquifer Description

The hydrogeology in the vicinity of HAAF is mostly influenced by two aquifer systems, the Principal Artesian (Floridan) Aquifer and the surficial aquifer (Miller 1990). The Principal Artesian Aquifer is the lowermost hydrologic unit and is regionally extensive from South Carolina to Georgia, Alabama, and most of Florida. Known elsewhere as the Floridan, this aquifer, approximately 800 ft in total thickness, is composed primarily of Tertiary-age limestone, including the Bug Island Formation, the Ocala Group, and the Suwannee Limestone. Groundwater from the Floridan is used primarily for drinking water (Arora 1984).

The confining layer for the Floridan Aquifer is the phosphatic clay of the Hawthorn Group. The surficial aquifer overlies the Hawthorn confining unit.

The surficial aquifer consists of widely varying amounts of sand and clay, ranging from 55 to 150 ft in thickness. This aquifer is primarily used for domestic lawn and agricultural irrigation. The top of the water table ranges from approximately 2 to 10 ft below ground surface (bgs) (Miller 1990). Groundwater in the surficial aquifer system is under unconfined, or water table, conditions. Locally, however, thin clay beds create confined or semi-confined conditions. Groundwater encountered at HAAF Pumphouse #1 UST investigation sites is part of the surficial aquifer system.

2.1.3 Surface Water

The water resources survey conducted during the CAP–Part B site investigation was presented in the CAP– Part B Report (SAIC 2000) and CAP–Part B Addendum #1 Report (SAIC 2002). Surface water bodies at HAAF include Hallstrom Lake, Lamar Canal, Buckhalter Canal, Springfield Canal, Pond 29 located northwest of Buildings 336 and 232, and an unnamed pond located along the southeastern boundary of the HAAF installation. Several unnamed drainage canals and ditches exist throughout HAAF. Most of these canals drain southwest into the Little Ogeechee River, which is part of the Lower Ogeechee watershed. The remaining drainage canals located on the eastern side of the HAAF installation flow east and eventually drain into the Vernon River, which is located southeast of the HAAF installation. Surface water bodies at HAAF and adjacent areas are not used as public water supplies. The ponds and lakes, as well as Lamar Canal, are perennial, whereas most of the drainage canals and ditches are intermittent. Most of the drainage canals are at least partially enclosed in culverts (SAIC 2006a).

2.1.4 Site Stratigraphy

The lithology encountered at the site is predominantly a white, pale brown, or light gray, very fine to medium-grained sand, with variable silt and clay content. Generally, the samples with higher silt and clay content were within a few feet of the surface. Less silt and clay content was noted with depth. The boring log of deep well P1-MW40 indicates increasing clay content from approximately 26 to 30 ft bgs, becoming a clayey, coarse-grained sand/gravel at 30 ft bgs.

2.1.5 Referenced or Documented Calculations

The following referenced or documented calculations were performed to support the CAP-Part B Site Investigation and were included in the CAP-Part B (SAIC 2000).

Disturbed soil samples were collected from eight monitor wells for grain-size analysis. In addition, undisturbed soil samples were collected from four monitor wells and a soil boring to determine selected engineering properties of the unsaturated zone at the site. The engineering properties measured included moisture content, porosity, specific gravity, bulk density and permeability.

Slug tests were conducted on two shallow and one deep well. The slug test data were evaluated using AQTESOLVE software. The calculated hydraulic conductivity values were 1.31×10^{-2} feet per minute (ft/min) (6.7×10^{-3} centimeters per second (cm/s) and 1.76×10^{-2} ft/min (8.9×10^{-3} cm/s in the shallow wells and 4.6×10^{-3} ft/min (2.3×10^{-3} cm/s) in the deep well. The average hydraulic conductivity based on slug test data is 1.17×10^{-2} ft/min (6.0×10^{-3} cm/s).

Aquifer testing (8-hour step test) was performed to determine the optimum pumping rate for the well. Pumping data yielded a transmissivity of 0.4035 ft^2/min assuming a saturated aquifer thickness of 60 ft (K = 0.0067 ft/min). The recovery data produced a transmissitvity of 0.089 ft^2/min assuming a saturated thickness of 60 ft.

2.1.6 Direction of Groundwater Flow

Historical water level measurements (Table 2-1) were taken during monitoring events to evaluate the directional flow in groundwater. Groundwater in the vicinity of the former Fuel Pit 1A/DAACG area was determined to flow generally to the northwest. Groundwater potentiometric surface measurements taken in December 2006, December 2007, and December 2008 are presented on Figures 2-3, 2-4 and 2-5, respectively. These annual water level measurements have consistently confirmed groundwater flow to the northwest.

2.2 Horizontal and Vertical Extent of Contamination

The horizontal and vertical extent of petroleum-related contamination in soil and groundwater was delineated by activities performed during the previous investigations at the former Pumphouse #1 site and the DAACG facility, which were documented in the CAP–Part B Report (SAIC 2000), the CAP–Part B Addendum #1 Report (SAIC 2002), and the CAP–Part B Addendum #2 Report (SAIC 2006a). Since the CAP-Part B Addendum #2, additional data have been obtained through annual sampling of monitor wells and a supplemental investigation using direct-push technology (DPT) conducted in January 2008. A summary of the results from these investigations is presented below.

2.2.1 Delineation of Soil Contamination

In the vicinity of the former Fuel Pit 1A/DAACG area (Release #1), the horizontal extent of petroleum-related contamination in soil was determined during the CAP-Part B site investigation and was discussed in detail in the CAP–Part B Report (SAIC 2000). Concentrations of benzene, toluene, ethylbenzene, benzo(*a*)pyrene, benzo(*b*)fluoranthene, chrysene, and indeno(1,2,3-*cd*)pyrene exceeded the applicable Georgia Underground Storage Tank (GUST) Soil Threshold Levels (STLs) (i.e., Table B, Column 1), and concentrations of benzene, benzo(*a*)pyrene, chrysene, and indeno(1,2,3-*cd*)pyrene exceeded their respective Alternate Threshold Levels (ATLs). Benzene was the only constituent in soil to exceed its ATL of 9.3 milligrams per kilogram (mg/kg) in six boring locations. Benzo(*a*)pyrene, chrysene, and indeno(1,2,3-*cd*)pyrene concentrations in one soil sample exceeded the ATLs of 1.4, 2.1, and 0.66 mg/kg, respectively. The referenced report included the conclusion that the soil samples with these concentrations exceeding the ATLs were collected from the capillary fringe above the soil/water interface in the area of free product, and the presence of free product may have contributed to the high concentrations. The report authors also noted that the soil contamination exceeding ATLs was determined to follow the area of free product and groundwater contamination.

In January 2008, 45 soil borings were advanced to the groundwater table using DPT within the area of soil contamination that was previously identified in the CAP–Part B Report (SAIC 2000). Borehole installation and boring logs are provided in Appendix A. One soil sample was collected from each boring at the depth interval with the highest photoionization detector (PID) field screening reading. The soil samples were analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX) using the U.S. Environmental Protection Agency (USEPA) Method 8021B/8260B, polynuclear aromatic hydrocarbons (PAHs) using USEPA Method 8270C, and lead using USEPA Method 6010B. The analytical results from the soil sampling are summarized in Tables 2-2 and 2-3 and Figures 2-6 and 2-7. The January 2008 supplemental soil investigation data did not include any detections of BTEX or PAHs that exceeded the

approved ATL.

Lead was detected in all 45 soil borings. Since there is no STL value under the GUST regulations, the data were compared against the Hazardous Site Response Act (HSRA) Type 1 and Type 3 Risk Reduction Standards (RRS) concentrations of 75 and 400 mg/kg, respectively. Results from two locations (DB-35 and DB-41) exceeded the Type 1 RRS for residential use scenarios at concentrations of 104 mg/kg and 127 mg/kg, respectively (SAIC, 2008a). However, no concentrations exceeded the Type 3 RRS for non-residential use.

The analytical results of the January 2008 supplemental investigation are summarized below (SAIC 2008a).

- Benzene was detected in 4 of 45 samples at concentrations ranging from 0.000609J to 0.259J mg/kg. There were seven samples with elevated detection limits greater than 0.1 mg/kg. The concentrations did not exceed the approved ATL of 9.3 mg/kg.

- Toluene was detected in 31 of 45 samples at concentrations ranging from 0.000454J to 52 mg/kg. The concentrations did not exceed the approved ATL of 479 mg/kg.

- Ethylbenzene was detected in 35 of 45 samples at concentrations ranging from 0.000313J to 16.2 mg/kg. The concentrations did not exceed the approved ATL of 187 mg/kg.

- Xylenes (total) were detected in 45 of 45 samples at concentrations ranging from 0.000302J to 74 mg/kg. The concentrations did not exceed the approved ATL of 893 mg/kg.

- 2-Methylnaphthalene was detected in 24 of 45 samples at concentrations ranging from 0.00796J to 0.273 mg/kg. There is no STL value for this constituent.

- Acenaphthene was detected in 6 of 45 samples at concentrations ranging from 0.0175J to 0.046 mg/kg. There is no STL for this constituent.

- Acenaphthylene was detected in 1 of 45 samples at a concentration of 0.201 mg/kg. Acenaphthylene is not listed in Table B, Column 1 of Chapter 391-3-15-.09; however, using acenaphthene as a surrogate chemical, there would be no STL.

- Anthracene was detected in 9 of 45 samples at concentrations ranging from 0.00718J to 0.0709 mg/kg. There is no STL for this constituent.

- Benzo(*a*)anthracene was detected in 7 of 45 samples at concentrations ranging from 0.0115J to 0.914 mg/kg. One of the concentrations exceeded the STL of 0.66 mg/kg. An ATL was not calculated for this constituent as part of the CAP–Part B Report. The same methodology used for the other constituents would give an ATL of 4.7 mg/kg (i.e., ATL = Koc x fcs xCstd x DAFw = 125,719 mL/g x 0.0117 x 4.9E-05 mg/L x 65.8 = 4.7 mg/kg). None of the concentrations exceeded this potential ATL.

- Benzo(*a*)pyrene was detected in 3 of 45 samples at concentrations ranging from 0.013J to 0.656 mg/kg. None of the concentrations exceeded the STL of 0.66 mg/kg or the approved ATL of 1.4 mg/kg.

- Benzo(*b*)fluoranthene was detected in 7 of 45 samples at concentrations ranging from 0.0129J to 0.965 mg/kg. One of the concentrations exceeded the STL of 0.66 mg/kg, but did not exceed the approved ATL of 5.8 mg/kg.

- Benzo(*g,h,i*)perylene was detected in 1 of 45 samples at a concentration of 0.0125J mg/kg. The concentration did not exceed the STL of 0.66 mg/kg.

- Benzo(*k*)fluoranthene was detected in 1 of 45 samples at a concentration of 0.431 mg/kg. The concentration did not exceed the STL of 0.66 mg/kg.

- Chrysene was detected in 6 of 45 samples at concentrations ranging from 0.0122J to 1.03 mg/kg. One of the concentrations exceeded the STL of 0.66 mg/kg, but did not exceed the approved ATL of 2.1 mg/kg.

- Dibenz(*a,h*)anthracene was detected in 1 of 45 samples at a concentration of 0.175 mg/kg. The concentration did not exceed the STL of 0.66 mg/kg.

- Fluoranthene was detected in 19 of 45 samples at concentrations ranging from 0.0152J to 0.946 mg/kg. There is no STL for this constituent.

- Fluorene was detected in 18 of 45 samples at concentrations ranging from 0.0108J to 0.115 mg/kg. There is no STL for this constituent.

- Indeno(1,2,3-*cd*)pyrene was detected in 1 of 45 samples at a concentration of 0.351 mg/kg. The concentration did not exceed the STL of 0.66 mg/kg or the approved ATL of 0.66 mg/kg.

- Naphthalene was detected in 9 of 45 samples at concentrations ranging from 0.0245J to 0.142 mg/kg. There is no STL for this constituent.

- Phenanthrene was detected in 20 of 45 samples at concentrations ranging from 0.0118J to 0.332 mg/kg. There is no STL for this constituent.

- Pyrene was detected in 16 of 45 samples at concentrations ranging from

in three samples (D-MW34, D-MW35, and D-MW38) (Figure 2-10). Toluene in D-MW17 was the only other constituent that exceeded the respective IWQSs or ACLs.

During the January 2008 supplemental investigation, the 45 soil borings that were discussed above for soil sampling were advanced with DPT to the groundwater table within the area of groundwater contamination that was identified in the CAP–Part B Report (SAIC 2000). One groundwater sample was collected from each boring from a 4-ft interval just below the soil/water interface. The groundwater samples were analyzed for BTEX using USEPA Method 8021B/8260B, PAHs using USEPA Method 8270C, and lead using USEPA Method 6010B (Appendix C). The analytical results from the soil sampling are summarized in Tables 2-4 and 2-5 and illustrated on Figure 2-11. Benzene was detected in groundwater from 12 borings at concentrations that exceeded the IWQS of 51 ug/L (Table 2-4). Benzene was detected in groundwater from eight soil borings at concentrations that exceeded the ACL of 285 ug/L. One sample (D-DB-45) had detected concentrations of benzo(a)anthracene and chrysene that exceeded their respective IWQSs (Table 2-5). Lead concentrations in groundwater exceeded the IWQS of 30 ug/L in samples from 15 of the 45 borings.

The analytical results of the January 2008 supplemental investigation are summarized as follows.

- Benzene was detected in 33 of 45 samples at concentrations ranging from 0.399J to 1,360 µg/L. The concentrations in 19 samples exceeded the IWQS of 51 µg/L, and the concentrations in 8 samples exceeded the ACL of 285 µg/L.

- Toluene was detected in 40 of 45 samples at concentrations ranging from 0.27J to 10,100 µg/L. Four of the concentrations exceeded the IWQS of 5,980 µg/L.

- Ethylbenzene was detected in 40 of 45 samples at concentrations ranging from 0.252J to 1,500 µg/L. None of the concentrations exceeded the IWQS of 2,100 µg/L.

- Total xylenes were detected in 41 of 45 samples at concentrations ranging from 0.264J to 5,670 µg/L. There is no ACL or IWQS for total xylenes. The concentrations did not exceed the maximum contaminant level (MCL) of 10,000 µg/L.

- 2-Methylnaphthalene was detected in 23 of 44 samples at concentrations ranging from 0.385J to 3.41 µg/L. There is no IWQS or ACL for 2-methylnaphthalene.

- Benzo(*a*)anthracene was detected in 1 of 44 samples at a concentration of 0.528J µg/L. The concentration exceeded the IWQS of 0.018 µg/L, but did not

exceed the ACL of 1.2 µg/L.

- Benzo(*b*)fluoranthene was detected in 1 of 44 samples at a concentration of 0.294J µg/L. There is no IWQS for benzo(*b*)fluoranthene. The concentration did not exceed the ACL of 3.6 µg/L.

- Chrysene was detected in 1 of 44 samples at a concentration of 0.386J µg/L. The concentration exceeded the IWQS of 0.018 µg/L, but did not exceed the ACL of 1.2 µg/L.

- Fluorene was detected in 1 of 44 samples at a concentration of 0.349J µg/L. The concentration did not exceed the IWQS of 5,300 µg/L.

- Naphthalene was detected in 28 of 44 samples at concentrations ranging from 0.441J to 14.2 µg/L. There is no IWQS for naphthalene. The concentrations did not exceed the ACL of 260 µg/L.

- Phenanthrene was detected in 2 of 44 samples at concentrations of 0.328J and 0.528J µg/L. There is no IWQS or ACL for phenanthrene.

- Pyrene was detected in 1 of 44 samples at a concentration of 0.668J µg/L. The concentration did not exceed the IWQS of 4,000 µg/L.

- Lead was detected in 43 of 44 samples at concentrations ranging from 0.27J to 204 µg/L. The concentrations in 15 samples exceeded the IWQS of 30 µg/L.

During the third annual sampling event in December 2008, 25 monitor wells were sampled for analysis of BTEX using U.SEPA Method 8260B and lead using USEPA Method 6010B. All groundwater and surface water samples collected were analyzed by a certified laboratory as listed in the Site-Wide Quality Assurance Project Plan (QAPP) (ARCADIS 2008). Field laboratory data included quality control samples, and all data were reviewed by the project chemistry team. All data reported by Shealy Laboratory were evaluated in accordance with the Level II validation protocols set forth in the Site-Wide QAPP (ARCADIS 2008). Field parameters from each well that were sampled are provided in Table 2-6. The analytical results are provided in Table 2-7a and Appendix D and illustrated in Figures 2-10 and 2-12. Historical groundwater analytical results are provided in Table 2-7b and Table 2-7c.

Analytical results from the sampling event are summarized below.

- Benzene was detected in 18 of 25 groundwater samples at concentrations ranging from 2.7 to 490J µg/L. The concentrations in eight samples exceeded the IWQS of 51 µg/L and in two samples exceeded the ACL of 285 µg/L.

- Toluene was detected in 18 of 25 groundwater samples at concentrations ranging from 1.7 to 4,900J µg/L. The concentrations did not exceed the IWQS or ACL.

- Ethylbenzene was detected in 21 of 25 groundwater samples at concentrations ranging from 1.4 to 2,500 µg/L. The concentrations did not exceed the IWQS or ACL.

- Total xylenes were detected in 20 of 25 groundwater samples at concentrations ranging from 1.9 to 2,700 µg/L. There is no ACL or IWQS for total xylenes.

- Lead was detected in 5 of 25 groundwater samples at concentrations ranging from 10 to 130 µg/L. The concentrations in two samples exceeded the IWQS of 30 µg/L.

2.2.3 Delineation of Free Product

Free product was identified at the former Fuel Pit 1A/DAACG area (Release #1) in February 2000. The free product was observed in wells D-MW1, D-MW2, D-MW8, D-MW11, D-MW13, and D-MW17 at thicknesses ranging from sheen to 0.88 ft. The horizontal extent of the free product was bounded by existing wells at the site.

In February 2001, 11 4-inch monitor wells (D-MW33 through D-MW43) were installed to supplement CAP–Part B investigation activities at this site. In March and July 2001, field bailout tests were conducted in wells D-MW2, D-MW34, and D-MW35 using the field bailout test method (Gruszczenski 1987). The results of the field bailout tests were presented in the CAP–Part B Addendum #1 Report (SAIC 2002). The thickest and most recoverable portion of the free product plume was located in the vicinity of wells D-MW2, D-MW34, and D-MW35.

In September/October 2003, additional activities were performed with CPT equipment with fluorescence detection to delineate the horizontal and vertical extent of the free product at both Release #1 and Release #2. The investigation concluded that the likely zones of nonaqueous-phase liquid (NAPL) contamination tend to occur between 6 and 13 ft bgs, which is in the vicinity of the water table and smear zone, and at a thickness ranging from 1 to 5 ft.

Absorbent socks were used in numerous wells associated with Release #1 between February 2000 and March 2005. Beginning in June 2005, bi-monthly VE activities were initiated on wells located throughout Release #1 area. The quantity of the water/product mixture varied from well to well. Subsequent report authors concluded

that the amount of free product removed from each well was very small (i.e., less than 0.5 gallon). In 2006, the free product removal method was changed to quarterly vacuum extraction at four wells for at least 8 hours. A summary of the free product thickness measured during the absorbent sock replacement or VE activities from June 2004 to January 2006 is provided in Table 2-8. In 2004, 2005 and 2006, the thickness ranged from sheen to 0.10 ft. In 2007, enhanced fluid recovery techniques were employed for free product removal on a quarterly basis in four wells across the site. The thickness ranged from sheen to 0.75 ft. The results of those activities are summarized in Table 2-9. Free product was not present in monitor wells measured in December 2007 or December 2008.

2.2.4 Delineation of Surface Water and Sediment Contamination

Results from the surface water and sediment samples collected during the CAP–Part B investigation were discussed in the CAP–Part B Report (SAIC 2000). BTEX constituents were collected in February 1999 from locations downgradient of the Release #1 area. The locations were approved in advance by GA EPD in January 1999. Some BTEX constituents were detected in the surface water samples but concentrations were below the IWQS. No PAH constituents were detected in the surface water samples. Low concentrations of total petroleum hydrocarbons and PAHs were detected in some of the sediment samples taken in December 1996. Additional sediment samples were not required by GA EPD.

3. Remedial Action Plan

3.1 Corrective Action Completed or in Progress

3.1.1 Recovery/Removal of Free Product

During sampling activities in February 2000, free product was measured in six wells at thicknesses from 0.01 to 0.74 ft. Absorbent socks were placed in each well following these measurements on February 24, 2000. As an interim action, the absorbent socks were removed and replaced in wells with free product on a bi-monthly basis from May 2000 through June 2003 and September 2004 through May 2005.

Beginning in June 2005, bi-monthly VE activities were initiated on approximately 50 wells located throughout the Release #1 and Release #2 areas. Reports on the VE events stated that the quantity of free product removed from each well was very small (i.e., less than 0.5 gallon). The results of these free product removal activities were presented in the CAP–Part B Addendum #1 Report (SAIC 2002) and the 2004-2005 Free Product Removal Report (SAIC 2006b).

In 2006, the free product removal method was changed to quarterly VE at four wells for a minimum of 8 hours. In 2007, EFR techniques were used for free product removal on a quarterly basis in the four wells with the greatest amount of free product (Table 2-9). The quantity of free product recovered continued to be small with most mass recovered in the vapor phase.

3.1.2 Remediation/Treatment of Contaminated Backfill Material and Native Soil

No contaminated backfill material or native soil associated with the former Fuel Pit 1A/DAACG area (Release #1) has been excavated, remediated, or treated.

3.2 Objectives of Corrective Action

3.2.1 Remove Free Product That Exceeds One-Eighth Inch at the Former Fuel Pit 1A/DAACG Area (Release #1)

The previously approved CAPs included the primary goal of removing free product in exceeding 1/8 inch thickness. Free product in excess of 1/8 inch has not been detected in monitor wells from June 2004 through December 2008. From June 2004

through 2006, free product was detected sporadically in CPT wells and all thickness measurements were less than 0.1 ft. During the quarterly measurements prior to VE events in 2007, four free product measurements (three in April and one in July) were reported above 0.01 ft. Recovery results indicated very little mobile (recoverable) mass. Liquid levels will be measured during future monitoring events to confirm the absence of free product at a thickness greater than 1/8 inch. EFR utilizing a vacuum truck will be invoked as the corrective action if free product is detected in recoverable quantities.

3.2.2 Remediate Groundwater Contamination at the Former Fuel Pit 1A/DAACG Area (Release #1)

As discussed in the CAP–Part B Report (SAIC 2000), previous investigations documented benzene contamination in groundwater at the former Fuel Pit 1A/DAACG area (Release #1) at concentrations that exceeded the IWQS of 51 µg/L and the ACL of 285 µg/L. The objectives of the corrective action for groundwater are to reduce the concentrations of the contaminants of concern to below ACLs approved in the CAP-Part B (SAIC 2000).

Three samples from monitor wells sampled in December 2007 contained lead concentrations above the IWQS of 30 µg/L. A total of four groundwater samples, including two sets of primary and duplicate samples collected from monitor wells in December 2008 contained lead concentrations above the IWQS. During the supplemental DPT investigation conducted in January 2008, lead was detected in 43 of 44 groundwater samples at concentrations ranging from 0.27J to 204 µg/L. The concentrations in 15 samples exceeded the IWQS of 30 µg/L. It should be noted that the samples from monitor wells were obtained utilizing low-flow purging techniques and all turbidity readings were less than 5 Nephelometric Turbidity Units (NTU). The samples obtained during the supplemental investigation were obtained with DPT and sample turbidity is not known. The samples taken with DPT were likely affected by higher turbidity and the monitor well samples are likely more indicative of the groundwater impacted by lead.

3.2.3 Remediate Soil Contamination at the Former Fuel Pit 1A/DAACG Area (Release #1)

The objective of the corrective action is to reduce concentrations of soil contaminants exceeding ATLs approved in the CAP-Part B (SAIC 2000). Data from the DPT soil sampling conducted in January 2008 demonstrated that concentrations of BTEX and PAHs are below their respective ATLs across the Release #1 area.

In data from DPT soil sampling conducted in January 2008, lead exceeded the Type 1 RRS of 75 mg/kg in two locations (D-DB-35 and D-DB-41), which are in the areas

impacted by petroleum hydrocarbons. There were not any soil lead concentrations that exceeded the Type 3 RRS of 400 mg/kg. Since the area is an active air field, the Type 3 RRS (Industrial) are likely to be most applicable.

3.2.4 Provide Risk-Based Corrective Action

A risk-based approach was used in the CAP–Part B Report (SAIC 2000) to identify COPCs for soil and groundwater and to develop ATLs and ACLs for various constituents. The results of the risk screening for Release #1 were presented in the CAP–Part B Report (SAIC 2000) and the results are summarized below.

Benzene, ethylbenzene, toluene, xylenes, benzo(*a*)pyrene, benzo(*b*)fluoranthene, chrysene, and indeno(1,2,3-*cd*)pyrene were identified as COPCs for soil. ATLs of 9.3 mg/kg for benzene, 187 mg/kg for ethylbenzene, 479 mg/kg for toluene, 893 mg/kg for xylenes, 1.4 mg/kg for benzo(*a*)pyrene, 5.8 mg/kg for benzo(*b*)fluoranthene, 2.1 mg/kg chrysene, and 0.66 mg/kg for indeno(1,2,3-*cd*)pyrene were proposed in the CAP–Part B Report (SAIC 2000).

Benzene, ethylbenzene, toluene, benzo(*a*)pyrene, chrysene, and naphthalene were identified as COPCs for groundwater. ACLs of 285 µg/L for benzene; 114,800 µg/L for ethylbenzene; 800,000 µg/L for toluene; 1.2 µg/L for benzo(*a*)pyrene; 1.2 µg/L for chrysene; and 260 µg/L for naphthalene were proposed in the CAP–Part B Report (SAIC 2000). The ATLs and ACLs were approved by GA EPD in correspondence dated December 18, 2000 (Logan 2000).

F&T modeling results were provided in the CAP–Part B Report (SAIC 2000). A storm drain located 230 ft northeast (downgradient) of the center of the plume was identified as the nearest possible location at which a receptor might encounter migrating groundwater contamination. Due to the proximity of Releases #1 and #2, the most conservative F&T modeling results were used for developing one set of ACLs and ATLs for both areas of contamination (SAIC 2000).

The CAP-Part B site investigation did not include analyses of soil or groundwater samples for lead. Lead was not identified as a COPC and risk based standards were not developed for lead in soil or groundwater. The proposed applicable standards for lead are the IWQS for groundwater and the HSRA Type III RRS for soil.

3.2.5 Conclusions and Recommendation

The following conclusions are based on the results discussed above:

- Recent thickness measurements indicate that very little mobile free product remains.
- Soil petroleum hydrocarbon concentrations are below ATLs.
- Groundwater petroleum hydrocarbon concentrations indicate that the groundwater impacted above ACLs is located in the area previously identified in the CAP-Part B as having the largest free product quantities.
- Lead concentrations in soil exceed the HSRA Type I RRS but not the Type III RRS.
- Lead concentrations in groundwater exceeded the IWQS in samples from three monitor wells. Lead concentrations detected in DPT groundwater samples were likely affected by turbidity and may not be representative.

3.3 Design and Operation of Corrective Action

3.3.1 Basis for Selection

The corrective action for the groundwater plume at the former Fuel Pit 1A/DAACG area should consist of alternatives that are protective of the environment, but can be implemented in a manner that causes minimal disruption of the active military flight operations. In previous CAPs, monitored natural attenuation (MNA) was selected as the most viable alternative once the free product had been removed because (1) the free product was continuing to act as a source for the groundwater contamination, and (2) the maximum benzene concentrations during the CAP–Part B and supplemental investigations were less than three times the ACL. The strategy was that MNA would provide for monitoring of the groundwater plume without impacting the military flight operations. The recommended corrective action for groundwater consisted of free product removal in conjunction with MNA of the groundwater plume until the free product was removed. At that point, the corrective action would be re-evaluated. After free product was reduced to less than 1/8 inch or agreed upon limits of recoverable mass, soil sampling of hot spots would be conducted to confirm soil contaminant concentrations were below ATLs.

Based on recent free product measurements, free product is no longer present at recoverable quantities and is less than 1/8 inch in thickness in monitor wells.

Soil sampling confirmed that all contaminants of concern previously identified in the CAP site investigation are below ATLs. Therefore, remediation of soil for petroleum hydrocarbon related contaminants is not necessary.

The groundwater areas identified as impacted with benzene concentrations above the ACL through data from monitor wells and the January 2008 DPT samples are similar and match the area noted in the CAP-Part B (MW-2, 34, 35) as containing the most free product (SAIC 2002) (Figure 3-1). This remedial target area for hydrocarbon remediation and the existing wells in the area are presented in Figure 3-2.

The lead concentrations in soil are below the HSRA Type III RRS and active remediation is not recommended. The groundwater areas impacted by lead above IWQS based on the monitor well sample data from December 2007 and December 2008 (MW34 and 35 and 38 [2007 only]) matches target area for benzene remediation. The DPT sampling results indicated that lead was present in groundwater samples at levels exceeding IWQS across a larger area. However, the elevated concentration of lead is likely attributable to turbid groundwater samples. Low-flow groundwater sampling conducted at the site before (December 2007) and after (December 2008) supported this hypothesis. The remedy for benzene will be selected with the goal of mitigating the lead concentration in groundwater.

In selecting the corrective action for the former Fuel Pit 1A/DAACG area, the following items were taken into consideration:

(1) A separate phase immobile residual is likely acting as a continuing source for groundwater contamination, and the fluctuations in concentrations are at least partially attributable to groundwater elevation changes. The variation of groundwater elevations with time is presented on Figure 3-3.

(2) For most monitor wells, the benzene concentrations in groundwater increased in December 2007 and decreased slightly in December 2008. Overall, benzene concentrations have decreased since the initial CAP site investigation. The variation of benzene concentrations with time is presented on Figure 3-4.

(3) There are active military flight operations in the area.

(4) Wells in the impacted area are oxygen depleted and biodegradation may be limited by terminal electron acceptor (TEA) availability.

(5) The remedy for dissolved benzene should be beneficial to mitigation of the dissolved lead.

The first phase of the corrective action strategy, consisting of removing the recoverable (mobile) free product, has been substantially completed, and no further free product recovery activities are recommended at this time. Free product has been detected periodically in some wells and appears to correlate with fluctuations in groundwater elevation. Free product thickness versus groundwater elevation is

presented for two wells most frequently manifesting free product in Figure 3-5 and Figure 3-6. Continued monitoring of CPT and monitor wells for free product should continue. Soil COPC concentrations were below ATLs and soil remediation is not necessary. The final phase of the corrective action is remediation of groundwater to below ACLs. Due to the oxygen limited conditions in groundwater, remediation through MNA may result in an extended timeframe. Therefore, an active corrective action addressing the remaining smear zone and groundwater contamination is recommended.

The primary focus of the alternative evaluation was to find a cost-effective method of remediating the site with minimal impact to the military flight operations. Therefore, more intrusive technologies such as six phase heating, pump and treat and air sparging with soil vapor extraction were eliminated from consideration. Mass transfer enhancements such as surfactant washing will be considered at a later date if concentration data indicate that a significant residual NAPL will result in an extended remediation timeframe. Because of the relatively low dissolved mass and contamination being located under the air field, aggressive chemical oxidation was not considered.

Therefore, enhanced bioremediation remedial alternatives were the focus of consideration. The first step in implementation of bioremediation is determination of biogeochemical characteristics of the aquifer. The proposed analyses are listed in Section 3.3.3. After these data are obtained, the bioremediation approach will be optimized. Either oxygen or sulfate will be selected as the most appropriate electron acceptor. Data indicate that oxygen is depleted in the plume area, but data are not available on other electron acceptors or sources of oxygen demand. There are no data on sulfate concentrations at the site but if sulfate depletion in the plume is determined, sulfate addition can be an effective remedy. If sulfate is determined to be the optimal TEA, a sulfate solution created by adding sulfate salts to potable water could be injected through existing or newly installed wells. If oxygen is selected as the optimal electron acceptor, a number of methods would be evaluated. An oxygen releasing substrate (calcium peroxide or other) could be slurried and injected with DPT into the target interval. Another alternative is injection of oxygenated groundwater through CPT points previously used for free product monitoring and recovery. Any gaps in coverage determined during the initial injection would be remedied by installation of additional injection wells. The groundwater could be oxygenated through gas diffusion technology, inline gas/liquid contactor or low concentrations of hydrogen peroxide. Nutrients would be added to the groundwater prior to injection if in-situ nutrient limits are determined to exist.

3.3.2 Theory and Feasibility

Dissolved-phase hydrocarbons above ACLs exist in the groundwater beneath the site. Water table elevation changes result in fluctuations in dissolved concentrations as the groundwater contacts residual source mass that is located in the smear zone. The dissolved BTEX compounds are potentially both aerobically and anaerobically biodegradable by bacteria, which already exist in the subsurface. The dissolved oxygen concentration in groundwater is less than 1 mg/L in impacted areas. Data are not available for other electron acceptors, but electron acceptor availability is likely a factor limiting biodegradation. Other encumbrances to bacterial metabolism, such as low nutrient concentrations, may also be minor factors limiting biodegradation. Therefore, as a first step, a data set will be collected to evaluate biogeochemical conditions within the affected shallow aquifer. Based on these data, an optimal electron acceptor will be selected for addition to the shallow groundwater with the goal of increasing the rate of biodegradation of benzene. Nutrients will be added to the water if determined to be beneficial. The electron acceptor will be added at a frequency determined from baseline biogeochemical data and subsequently from monitoring of the initial injection. The application can be through existing CPT wells formerly used to monitor and recover free product, through DPT points or through newly installed injection wells. The monitor wells currently used to monitor the plume will be utilized to obtain samples to evaluate remediation progress. The injection rate and total TEA mass will be determined based on the calculated TEA demand and the optimal injection rates determined during first injection activity.

3.3.3 Remediation System

The first task will be sampling of selected monitor wells for analysis of biogeochemical parameters. Samples will be taken from monitor wells D-MW1, D-MW2, D-MW11, D-MW34, D-MW35, D-MW37, D-MW19, D-MW41 and D-MW42. Samples from D-MW41 and D-MW42 will be used to establish background conditions. Samples will be analyzed for the following:

- Dissolved Organic Carbon (DOC)
- Alkalinity
- Total Phosphorus (two monitor wells)
- Total (Kjedahl) Nitrogen (two monitor wells)
- Nitrogen as Nitrate
- Total/Dissolved Fe
- Sulfate
- Sulfide

- Oxidation Reduction Potential (ORP)
- pH
- Dissolved Oxygen (DO)
- Methane
- Volatile Organic Compounds (VOCs)
- Total Petroleum Hydrocarbons (TPH)
- Total/dissolved lead
- Lead speciation (organic and inorganic forms in two monitor wells)

If sulfate is determined to be a significant TEA at the site based on the results of these analyses, Biotrap® samplers will be installed in two wells to confirm the presence of sulfate-reducing bacteria. These are passive sampling devices that can be installed in standard monitor wells to permit representative sampling of the bacterial community in the aquifer. The samplers would be left in place for approximately 45 days to collect time integrated bacterial samples. A Performance Report will be generated utilizing these data and submitted to GA EPD. The Performance Report will summarize the biogeochemical data and will describe the rationale for selection of the optimal electron acceptor (oxygen or sulfate). Initial estimates of TEA requirements and nutrient requirements will also be made.

The first injection of the TEA solution or slurry will be conducted in accordance with injection rates estimated from existing site hydrogeological data. Addition rates and distribution area and aquifer chemistry will be evaluated and subsequent injection strategy will be adjusted. For injection through existing wells, a tracer may be added and surrounding wells sampled for analysis of tracer concentration. The effects of the first bioremediation injection will be monitored for a time period appropriate to the selected technology (likely 4 to 6 months). After sufficient post-injection monitoring data are collected, a second Performance Report will be submitted for GA EPD review. The report will present the data set and recommended optimizations for the bioremediation approach.

The subsequent remediation approach will consist of periodic addition of TEA and possibly nutrients to enhance biodegradation. The specific frequency and volumes will be determined and explained in the report. In addition to the annual sampling described below, monitoring of each injection event will be conducted quarterly. GA EPD will be notified if a change to the frequency of monitoring activities is proposed. After evaluation of baseline biogeochemical data and determination of the strategy for the first injection, GA EPD Underground Injection Control (UIC) will be notified of the proposed injection in accordance with Procedure EPD-UIC-003. A UIC permit

application will be submitted after initial results are evaluated and injection design is complete.

The post-injection monitoring will consist of sampling of up to 20 wells. These wells may include, but are not limited to, D-MW1, D-MW2, D-MW11, D-MW18, D-MW34, D-MW35, D-MW37, D-MW19, D-MW33, D-MW38, D-MW43, and P1-MW42. CPT wells or newly installed wells may also be sampled. Wells sampled will include sufficient downgradient wells to evaluate contaminant migration. Any changes to the remediation strategy proposed in this document will be submitted to GA EPD.

3.4 Implementation

3.4.1 Milestone Schedule

A project schedule for the proposed corrective action has been prepared. A Gantt chart showing milestone activities and anticipated duration is provided in Figure 3-7. Fort Stewart will notify GA EPD of any significant changes to the schedule and will provide GA EPD with an updated Gantt chart, as necessary. The schedule will be updated after injection strategy and frequency are finalized.

3.4.2 Progress Reporting

Performance Reports will be submitted to GA EPD that will summarize the sampling, injection and/or monitoring activities. The period will be based on optimal monitoring or injection frequency. At a minimum, the Performance Report will consist of a table summarizing the TEA addition activities and biogeochemistry data and a proposal for subsequent activities. In addition, annual reports summarizing all remediation and monitoring activities for the preceding year will be submitted to GA EPD.

Petition for permanent closure (i.e., completion report) will be submitted upon approval of the final progress report when Release #1 reaches GA EPD-approved closure criteria. GA EPD will provide final approval for decommissioning the monitor wells. Decommissioning of the monitor wells will be completed in accordance with the United States Army Corps of Engineers (USACE) design manual for monitor wells. Decommissioning will comply with all applicable state and federal standards. The following certification will be submitted to GA EPD within 30 days of submittal of the final progress report:

I hereby certify that the Corrective Action Plan–Part B, dated , 20 , for Hunter Army Airfield, Former Pumphouse #1 site (Release #1), Facility ID 9-025085*1, including any and all certified amendments/addenda thereto, has been implemented in accordance with the schedules, specifications, sampling programs, and conditions

contained therein and that the plan's stated objectives have been met.

_____

Signature (Owner/Operator)

3.4.3 Inspection Schedule and Preventative Maintenance Program

There will not be a permanent system installed at HAAF; thus, on-site inspection and preventative maintenance will not be required.

3.4.4 Periodic Monitoring

Groundwater samples will be collected annually from up to 26 wells (D-MW1, D-MW2, D-MW8, D-MW11, D-MW12, D-MW13, D-MW17, D-MW18, D-MW19, D-MW22, D-MW33, D-MW34, D-MW35, D-MW36, D-MW37, D-MW38, D-MW39, D-MW40, D-MW41, D-MW42, D-MW43, P1-MW11, P1-MW12, P1-MW13, P1-MW42) and analyzed for BTEX and lead. The wells in the monitoring program may be adjusted based on the results of analytical data. PAH compounds observed during the CAP–Part A and Part B investigations and subsequent sampling were detected at concentrations below their respective ACLs. Therefore, it is recommended that PAH analysis not be performed during the annual sampling. Remedial action will continue at the site until the ACLs are achieved as agreed upon by GA EPD and HAAF. If required by GA EPD, one additional groundwater sampling event will be conducted for analysis of PAHs once ACLs have been achieved. The monitoring only portion of the corrective action will continue until the benzene concentrations in groundwater are below the ACL of 285 µg/L for two sampling events and lead concentrations in soil and groundwater meet appropriate standards as agreed upon by HAAF and GA EPD. Wells may be added or removed from the monitoring plan as the boundaries of the plume change. These changes will be documented in the monitoring only reports.

During each sampling event, water levels will be measured in all monitor wells. Specific conductivity, pH, and temperature analyses will be measured on each sample from the monitor wells from which analytical samples are collected. The samples will be shipped to a GA EPD certified laboratory for BTEX analysis in accordance with USEPA Methods 8021B/8260B and 6010B.

3.4.5 Effectiveness of Corrective Action

The corrective action (i.e., enhanced bioremediation followed by MNA) will be discontinued once the objectives of the monitoring only plan have been achieved. Two of the three goals approved in previous CAP have been achieved and will be

considered complete upon concurrence of GA EPD and HAAF.

The two goals completed are:

- The quantity of free product in monitor wells has reached reduction goals and recovery efforts will be terminated if agreed upon by GA EPD and HAAF. Continued monitoring for free product is warranted, however.
- The benzene, benzo(*a*)pyrene, chrysene, and indeno(1,2,3-*cd*)pyrene concentrations in soil are reduced to below their ATLs of 9.3 , 1.4, 2.1, and 0.66 mg/kg, respectively.

The remaining goal is reduction of the benzene concentrations in groundwater to below the ACL of 285 µg/L. In addition, the lead concentration in groundwater will be reduced below the IWQS (30 µg/L) or other appropriate standard.

3.4.6 Confirmatory Soil Sampling Program

No excavation of soil is planned. Therefore, confirmatory sampling associated with excavation of soil will not be performed. Confirmatory samples of soil contamination that previously exceeded the benzene ATL of 9.3 mg/kg, the benzo(*a*)pyrene ATL of 1.4 mg/kg, the chrysene ATL of 2.1 mg/kg, and the indeno(1,2,3-*cd*)pyrene ATL of 0.66 has been completed and all concentrations were below ATLs.

3.4.7 Stockpiled Bulk Soil Sampling

For the former Fuel Pit 1A/DAACG area (Release #1), no stockpiled soil will be generated by this corrective action. Therefore, no soil sampling will be conducted.

3.4.8 Monitoring Only Termination Conditions

As previously stated in the CAP Addendum 2, the following conditions are required prior to termination of monitoring only program:

- Concentrations of benzene in groundwater must be at or below the ACL.
- Concentrations of benzene, benzo(*a*)pyrene, chrysene, and indeno(1,2,3-*cd*)pyrene in soil must be at or below their respective ATLs prior to termination of the monitoring only program.
- Product removal activities must have reached a quantifiable goal agreed to by GA EPD and HAAF.

Once these conditions are met, the remedial system and monitoring may be terminated regardless of the site ranking score.

An additional goal is reduction of lead concentrations to below IWQS or other appropriate risk based standard.

3.4.9 Post-Completion Site Restoration Activities

As the remediation is currently planned, no modifications will be made to the Release #1 area because no permanent equipment or systems will be located at the site.

4. Public Notification

The former Pumphouse #1 site is located entirely within the confines of HAAF, which is part of the Fort Stewart Military Reservation, a federal facility. The U. S. Government owns all of the property contiguous to the site. The Fort Stewart DPW has complied with the public notice requirements defined by GA EPD guidance by publishing an announcement in the *Savannah Morning News* on April 1 and 8, 2001. When GA EPD and HAAF agree that the free product removal part of the corrective action has been completed, an updated public notice will be made.

5. Claim for Reimbursement

HAAF is a federally owned facility and has funded the investigation for the former Pumphouse #1 site (Release #1), Facility ID #9-025085*1 using U. S. Department of Defense Environmental Restoration Funds. Application for GUST Trust Fund reimbursement is not being pursued at this time.

Soil Threshold Levels (Chapter 391-3-15-.09, Table B, Column 1)				0.017	115	18	700
Alternate Threshold Levels (approved)				9.3	479	187	893

Source:2008 Supplemental Site Investigation Data Package Former Pumphouse #1, Release #1 (SAIC, 2008)

Notes:

Bold values are detected concentrations that exceed soil threshold levels

Italics values are detected concentrations that exceed alternate threshold limits

mg/kg - milligram per kilogram

BGS - Below Ground Surface

BTEX - Benzene, toulene, ethylbenzene, and xylenes

NRC - No regulatory Criteria

DPT - Direct Push Tecnology

Laboratory Qualifiers:

U - Indicates the compound was not detected at the concentration reported

J - Indicates the value of the compound is an estimated value

= - Indicates the compound was detected at the concentration reported

Source:2008 Supplemental Site Investigation Data Package Former Pumphouse #1, Release #1 (SAIC, 2008)

Notes:
Bold values are detected concentrations that exceed soil threshold levels
Italics values are detected concentrations that exceed alternate threshold limits
mg/kg - milligram per kilogram
BGS - Below Ground Surface
PAHs - Poly Aromatic Hydrocarbons
NRC - No regulatory Criteria
DPT - Direct Push Tecnology

Laboratory Qualifiers:
J - Indicates the value of the compound is an estimated value
= - Indicates the compound was detected at the concentration reported

Notes:
Bold values indicate detections that exceed IWQS
Italics values indicate detections that exceed alternate threshold limits
ug/L - microgram per liter
BGS - Below Ground Surface
PAH - Poly Aromatic Hydrocarbons
NRC - No regulatory Criteria
DPT - Direct Push Tecnology

Laboratory Qualifiers:
U - Indicates the compound was not detected at the concentration reported
J - Indicates the value of the compound is an estimated value
= - Indicates the compound was detected at the concentration reported

Source:2007 Free Product Monitoring and Removal Only Report Former Pumphouse #1, Release #1 (SAIC, 2008)

Notes:

a - Wells installed during the Pumphouse #1 CAP-Part A and CAP-Part B investigations and were resurveyed in February 2001so reference could be consistent.
BGS - below ground surface
PVC - Polyvinyl chloride
CPT - Cone penetrometer technology

▲ DPT Boring (2008)

Lead Concentration above Type I Risk Reduction Standard (75 mg/kg)

J - Estimated Value

NOTES:
1) Samples collected in January 2008.
2) All concentrations reported in milligrams per kilogram (mg/kg).
3) Soil Threshold Levels (STL).
4) Lead concentrations did not exceed Type III Risk Reduction Standard (400 mg/kg) in any sample.
5) PAH concentrations did not exceed Alternate Threshold Levels (ATL) in any sample.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also >70%
Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Project: **Hunter Army Airfield LTM (01-1055-04-2945-200)**

Client Sample ID: AK0519
Sample ID: 201086003

Project: SAIC007202
Client ID: SAIC072

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Sample ID: 201683002

Project: SAIC08507
Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also ~70%
Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
* Analytical holding time was exceeded

Project: SAIC08507
Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

J Value is estimated
M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also %
Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Project: **Hunter FY06 Monitoring and Misc Investigations 01-1055-04-3056-20**

Client Sample ID: AK2419 Project: SAIC08507
Sample ID: 201705005 Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
BD Results are either below the MDC or tracer recovery is low
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

M M if above MDC and less than LLD
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also >40%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
UI Gamma Spectroscopy--Uncertain identification
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on a dry weight basis except where prohibited by the analytical procedure.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

Analyte is a surrogate compound

Certificate of Analysis

Company : SAIC
Address : 151 Lafayette Drive
Oak Ridge, Tennessee 37831

Report Date: April 9, 2008

Contact: Leslie Barbour
Project: Hunter Army Airfield LTM (01-1055-04-2945-200)

Client Sample ID: AK0214
Sample ID: 201112009

Project: SAIC007202
Client ID: SAIC072

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Toluene-d8	8260B BTEX in Liquid Federal "As Received"	3220 ug/L	60.0	107	(84%-121%)

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC).

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC).

Notes:
The Qualifiers in this report are defined as follows :

Analyte is a surrogate compound

Certificate of Analysis

Company : SAIC
Address : 151 Lafayette Drive
Oak Ridge, Tennessee 37831

Report Date: April 9, 2008

Contact: Ms. Leslie Barbour

Project: **Hunter FY06 Monitoring and Misc Investigations 01-1055-04-3056-20**

Client Sample ID: AK0918
Sample ID: 201537004

Project: SAIC08507
Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Dibromofluoromethane	8260B BTEX in Liquid Federal "As Received"	72.0 ug/L	60.0	120	(75%-129%)
Toluene-d8	8260B BTEX in Liquid Federal "As Received"	59.5 ug/L	60.0	99	(84%-121%)

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC).

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Project: **Hunter FY06 Monitoring and Misc Investigations 01-1055-04-3056-20**

Client Sample ID: AK1418
Sample ID: 201537005

Project: SAIC08507
Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
[illegible] Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
alue is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC).

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
/alue is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC).

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Dibromofluoromethane	8260B BTEX in Liquid Federal "As Received"	54.3 ug/L	50.0	109	(75%-129%)
Toluene-d8	8260B BTEX in Liquid Federal "As Received"	50.1 ug/L	50.0	100	(84%-121%)

Notes:
The Qualifiers in this report are defined as follows :

** Analyte is a surrogate compound
< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
E Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC).

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
" Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

* Analyte is a surrogate compound

GEL LABORATORIES LLC
2040 Savage Road Charleston SC 29407 - (843) 556-8171 - www.gel.com

Certificate of Analysis

Company : SAIC
Address : 151 Lafayette Drive
Oak Ridge, Tennessee 37831

Contact: Ms. Leslie Barbour
Project: **Hunter FY06 Monitoring and Misc Investigations 01-1055-04-3056-20**

Report Date: April 9, 2008

Client Sample ID: AK3318
Sample ID: 201745003

Project: SAIC08507
Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

Analyte is a surrogate compound

Certificate of Analysis

Company : SAIC
Address : 151 Lafayette Drive
Oak Ridge, Tennessee 37831

Report Date: April 18, 2008

Contact: Ms. Leslie Barbour

Project: **Hunter FY06 Monitoring and Misc Investigations 01-1055-04-3056-20**

Client Sample ID: AK3618
Sample ID: 201710008

Project: SAIC08507
Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

Analyte is a surrogate compound

GEL LABORATORIES LLC
2040 Savage Road Charleston SC 29407 - (843) 556-8171 - www.gel.com

Certificate of Analysis

Company : SAIC
Address : 151 Lafayette Drive
Oak Ridge, Tennessee 37831

Report Date: April 9, 2008

Contact: Leslie Barbour

Project: Hunter Army Airfield LTM (01-1055-04-2945-200)

Client Sample ID: AK3918
Sample ID: 201112015

Project: SAIC007202
Client ID: SAIC072

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
F Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
J Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Notes:
The Qualifiers in this report are defined as follows :

* Analyte is a surrogate compound

GEL LABORATORIES LLC
2040 Savage Road Charleston SC 29407 - (843) 556-8171 - www.gel.com

Certificate of Analysis

Company : SAIC
Address : 151 Lafayette Drive
Oak Ridge, Tennessee 37831

Report Date: April 9, 2008

Contact: Ms. Leslie Barbour
Project: **Hunter FY06 Monitoring and Misc Investigations 01-1055-04-3056-20**

Client Sample ID: AK4218
Sample ID: 201745007

Project: SAIC08507
Client ID: SAIC085

Parameter	Qualifier	Result	DL	RL	Units	DF	AnalystDate	Time	Batch	Method

< Result is less than value reported
> Result is greater than value reported
A The TIC is a suspected aldol-condensation product
B For General Chemistry and Organic analysis the target analyte was detected in the associated blank.
C Analyte has been confirmed by GC/MS analysis
D Results are reported from a diluted aliquot of the sample
E Metals--%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
Ɒ Organics--Concentration of the target analyte exceeds the instrument calibration range
Analytical holding time was exceeded
Value is estimated
N Organics--Presumptive evidence based on mass spectral library search to make a tentative identification of the analyte (TIC). Quantitation is based on nearest internal standard response factor
N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

N/A RPD or %Recovery limits do not apply.
ND Analyte concentration is not detected above the detection limit
NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, difference is also <70%
R Sample results are rejected
U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Y QC Samples were not spiked with this compound
^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
h Preparation or preservation holding time was exceeded

The above sample is reported on an "as received" basis.
Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

Annual Monitoring Lab Data – December 2008

SHEALY ENVIRONMENTAL SERVICES, INC.

Report of Analysis

ARCADIS U.S., Inc.
30 Patewood Drive
Suite 155
Greenville, SC 29615
Attention: Chuck Bertz

Project Name: **Fort Stewart - HAAF**

Project Number: **GP08HAFS.H13A.NA1R1**

Lot Number: **JL19058**

Date Completed: **12/30/2008**

Michael Casalena
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
ARCADIS U.S., Inc.
Lot Number: JL19058

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

(74 detections)

Volatile Organic Compounds by GC/MS

Client: ARCADIS U.S., Inc.
Description: D-MW34 (121608)
Date Sampled: 12/16/2008 1615
Date Received: 12/19/2008

Laboratory ID: JL19058-002
Matrix: Aqueous

Run	Prep Method	Analytical Method	Dilution	Analysis Date	Analyst	Prep Date	Batch
1	5030B	8260B	100	12/29/2008 1512	DLB		92557

Parameter	CAS Number	Analytical Method	Result	Q	PQL	Units	Run
Benzene	71-43-2	8260B	490		50	ug/L	1
Ethylbenzene	100-41-4	8260B	510		50	ug/L	1
Toluene	108-88-3	8260B	4900		50	ug/L	1
Xylenes (total)	1330-20-7	8260B	2700		50	ug/L	1

Surrogate	Q	Run 1 % Recovery	Acceptance Limits
1,2-Dichloroethane-d4		90	52-138
Bromofluorobenzene		103	70-147
Toluene-d8		90	76-125

PQL = Practical quantitation limit
ND = Not detected at or above the PQL
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL

E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
N = Recovery is out of criteria

QC Summary

Volatile Organic Compounds by GC/MS - MB

Sample ID: JQ92454-001
Batch: 92454
Analytical Method: 8260B

Matrix: Aqueous
Prep Method: 5030B

Parameter	Result	Q	Dil	PQL	Units	Analysis Date
Benzene	ND		1	0.50	ug/L	12/27/2008 1448
Ethylbenzene	ND		1	0.50	ug/L	12/27/2008 1448
Toluene	ND		1	0.50	ug/L	12/27/2008 1448
Xylenes (total)	ND		1	0.50	ug/L	12/27/2008 1448

Surrogate	Q	% Rec	Acceptance Limit
Bromofluorobenzene		86	70-147
1,2-Dichloroethane-d4		95	52-138
Toluene-d8		91	76-125

PQL = Practical quantitation limit
ND = Not detected at or above the PQL
P = The RPD between two GC columns exceeds 40%
J = Estimated result < PQL and ≥ MDL
N - Recovery is out of criteria
+ - RPD is out of criteria

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

Note: Calculations are performed before rounding to avoid round-off errors in calculated results

JL19058 JL19059

Client: ARCADIS Cooler Inspected by/date: SAM 12/19/08 Lot#: JL19016

Means of receipt: ☐ SESI ☐ Client ☐ UPS ☑ FedEx ☐ Airborne Exp ☐ Other			
Yes ☐	No ☑	NA ☐	1. Were custody seals present on the cooler?
Yes ☐	No ☐	NA ☑	2. If custody seals were present, were they intact and unbroken?
Cooler ID/temperature upon receipt 3.2/ °C / °C / °C / °C / °C / °C / °C / °C			
Method: ☑ Temperature Blank ☐ Against Bottles			
Method of coolant: ☐ Wet Ice ☐ Blue Ice ☐ Dry Ice ☐ None			
If response is No (or Yes for 14, 15, 16), an explanation/resolution must be provided.			
Yes ☐	No ☐	NA ☑	3. If temperature of any cooler exceeded 6.0°C, was Project Manager notified? PM notified by SRC, phone, note (circle one), other:_____. (For coolers received via commercial courier, PMs are to be notified immediately.
Yes ☑	No ☐	NA ☐	4. Is the commercial courier's packing slip attached to this form?
Yes ☐	No ☑	NA ☐	5. Were proper custody procedures (relinquished/received) followed?
Yes ☑	No ☐	NA ☐	6. Were sample IDs listed?
Yes ☑	No ☐	NA ☐	7. Was collection date & time listed?
Yes ☑	No ☐	NA ☐	8. Were tests to be performed listed on the COC or was quote # provided?
Yes ☑	No ☐	NA ☐	9. Did all samples arrive in the proper containers for each test?
Yes ☑	No ☐	NA ☐	10. Did all container label information (ID, date, time) agree with COC?
Yes ☑	No ☐	NA ☐	11. Did all containers arrive in good condition (unbroken, lids on, etc.)?
Yes ☑	No ☐	NA ☐	12. Was adequate sample volume available?
Yes ☐	No ☑	NA ☐	13. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
Yes ☐	No ☑	NA ☐	14. Were any samples containers missing?
Yes ☐	No ☑	NA ☐	15. Were there any excess samples not listed on COC?
Yes ☐	No ☑	NA ☐	16. Were bubbles present >"pea-size" (¼" or 6mm in diameter) in any VOA vials?
Yes ☑	No ☐	NA ☐	17. Were all metals/O&G/HEM/nutrient samples received at a pH of <2?
Yes ☐	No ☐	NA ☑	18. Were all cyanide and/or sulfide samples received at a pH >12?
Yes ☐	No ☐	NA ☑	19. Were all applicable NH3/TKN/cyanide/phenol/BNA/pest/PCB/herb (<0.2mg/L) and toxicity (<0.1mg/L) samples free of residual chlorine?
Yes ☐	No ☐	NA ☑	20. Were collection temperatures documented on the COC for NC samples?

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s)_____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ (H_2SO_4,HNO_3,HCl,NaOH) with the SR # (number)

Sample(s)_____ were received with bubbles >6 mm in diameter.

Sample(s)_____ were received with TRC >0.2 mg/L for NH3/TKN/cyanide/BNA/pest/PCB/herb.

Toxicity sample(s)_____ were received with TRC >0.1 mg/L and were analyzed by method 330.5.

Date	Time	Collection (Grab / Composite)	Matrix: Aqueous	Matrix: Soil	Matrix: Other (Specify)	No. of Containers by Preservative Type: Unpres.	HCl	HNO3	ICE	H2SO4	NaOH	Zn Acet.	BTEX (SW8260B)	Lead (SW6010B)	Remarks / Cooler I.D.
D-HW140 (121708)	12/17/08	1518	G	X						1	3			X	X	JL19058
D-HW141 (121708)		1002	G	X						1	3			X	X	
D-HW142 (121708)		1135	G	X						1	3			X	X	
P1-HW142 (121708)		1821	G	X						1	3			X	X	
DUP-HAAB1-1 (121608)	12/16/08	1200	G	X						1	3			X	X	
DUP-HAAB1-2 (121708)	12/17/08	1200	G	X						1	3			X	X	
D-MW43 (121808)	12/18/08	0915	G	X						1	3			X	X	
TB-1 (121608)	12/16/08	0700	G	X							2			X		
Erica Maddox																

Possible Hazard Identification: ☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison ☐ Unknown

Sample Disposal: ☐ Return to Client ☑ Disposal by Lab

Note: All samples are retained for six weeks from receipt unless other arrangements are made.

Turn-Around Time Required (Prior lab approval required for expedited TAT.): ☐ Standard ☐ Rush (Specify)

QC Requirements (Specify)

	Date	Time		Date	Time
1. Relinquished by: Erica Maddox	12/19/08	1200	1. Received by		
2. Relinquished by			2. Received by		
3. Relinquished by: FedEx	12/19/08	0944	3. Laboratory received by	12/19/08	0944

Comments:

LAB USE ONLY
Received on ice (Circle): Yes / No Ice Pack
Receipt Temp: 3.2 °C

DISTRIBUTION: WHITE & YELLOW-Return to laboratory with Sample(s); PINK-Field/Client Copy

Document Number: F-AD-012 Effective Date: 08-04-08

Level 1 Report V2.1

SHEALY ENVIRONMENTAL SERVICES, INC.

SHEALY ENVIRONMENTAL SERVICES, INC.

Report of Analysis

ARCADIS U.S., Inc.
30 Patewood Drive
Suite 155
Greenville, SC 29615
Attention: Chuck Bertz

Project Name: Hunter Stewart - HAAF

Project Number: GP08HAFS.H13A.NA1R1

Lot Number: JL19059

Date Completed: 12/31/2008

Michael Casalena
Project Manager

This report shall not be reproduced, except in its entirety, without the written approval of Shealy Environmental Services, Inc.

The following non-paginated documents are considered part of this report: Chain of Custody Record and Sample Receipt Checklist.

Case Narrative
ARCADIS U.S., Inc.
Lot Number: JL19059

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Summary
ARCADIS U.S., Inc.
Lot Number: JL19059

Sample Number	Sample ID	Matrix	Date Sampled	Date Received
001	D-MW41 (121708)	Aqueous	12/17/2008 1002	12/19/2008
002	D-MW42 (121708)	Aqueous	12/17/2008 1135	12/19/2008

Executive Summary
ARCADIS U.S., Inc.
Lot Number: JL19059

Sample	Sample ID	Matrix	Parameter	Method	Result	Q	Units	Page
002	D-MW42 (121708)	Aqueous	Ethylbenzene	8260B	1.4		ug/L	7
002	D-MW42 (121708)	Aqueous	Xylenes (total)	8260B	1.9		ug/L	7
004	DUP-HAAI3RI-1 (121608)	Aqueous	Benzene	8260B	240		ug/L	11
004	DUP-HAAI3RI-1 (121608)	Aqueous	Ethylbenzene	8260B	220		ug/L	11
004	DUP-HAAI3RI-1 (121608)	Aqueous	Toluene	8260B	2400		ug/L	11
004	DUP-HAAI3RI-1 (121608)	Aqueous	Xylenes (total)	8260B	1300		ug/L	11
004	DUP-HAAI3RI-1 (121608)	Aqueous	Lead	6010B	0.13		mg/L	12
005	DUP-HAAI3R1-2 (121708)	Aqueous	Benzene	8260B	140		ug/L	13
005	DUP-HAAI3R1-2 (121708)	Aqueous	Ethylbenzene	8260B	98		ug/L	13
005	DUP-HAAI3R1-2 (121708)	Aqueous	Toluene	8260B	1000		ug/L	13
005	DUP-HAAI3R1-2 (121708)	Aqueous	Xylenes (total)	8260B	740		ug/L	13
005	DUP-HAAI3R1-2 (121708)	Aqueous	Lead	6010B	0.11		mg/L	14
006	D-MW43 (121808)	Aqueous	Benzene	8260B	22		ug/L	15
006	D-MW43 (121808)	Aqueous	Ethylbenzene	8260B	180		ug/L	15
006	D-MW43 (121808)	Aqueous	Toluene	8260B	57		ug/L	15
006	D-MW43 (121808)	Aqueous	Xylenes (total)	8260B	620		ug/L	15
010	26-MW-42(121808)	Aqueous	Benzene	8260B	1.5		ug/L	20
012	26-MW-50(121808)	Aqueous	Benzene	8260B	62		ug/L	22
016	26-MW-22(121808)	Aqueous	Toluene	8260B	2.0		ug/L	26
017	26-MW-52(121808)	Aqueous	Benzene	8260B	1.0		ug/L	27
018	26-MW-51(121808)	Aqueous	Benzene	8260B	0.78		ug/L	28

(21 detections)

Volatile Organic Compounds by GC/MS

Client: ARCADIS U.S., Inc.
Description: D-MW41 (121708)
Date Sampled: 12/17/2008 1002
Date Received: 12/19/2008

Laboratory ID: JL19059-001
Matrix: Aqueous

Run	Prep Method	Analytical Method	Dilution	Analysis Date	Analyst	Prep Date	Batch
1	5030B	8260B	1	12/29/2008 1339	DLB		92557

Parameter	CAS Number	Analytical Method	Result	Q	PQL	Units	Run
Benzene	71-43-2	8260B	ND		0.50	ug/L	1
Ethylbenzene	100-41-4	8260B	ND		0.50	ug/L	1
Toluene	108-88-3	8260B	ND		0.50	ug/L	1
Xylenes (total)	1330-20-7	8260B	ND		0.50	ug/L	1

Surrogate	Q	Run 1 % Recovery	Acceptance Limits
1,2-Dichloroethane-d4		92	52-138
Bromofluorobenzene		102	70-147
Toluene-d8		92	76-125

PQL = Practical quantitation limit
ND = Not detected at or above the PQL
Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W"

B = Detected in the method blank
J = Estimated result < PQL and ≥ MDL

E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
N = Recovery is out of criteria

ICP-AES
