CAP PART B ADDENDUM (CAP)

1.0 Plan Certification by UST Owner/Operator

I hereby certify that the information, contained in this plan and all attachments, is true, accurate, and complete, and the plan satisfies all the criteria and requirements of Rule 391-3-15-.09 of the Rules for Underground Storage Tank Management.

Printed Name (Owner/Operator)Signature (Owner/Operator)

2.0 Site Investigation Plan

The site is located at the Army and Air Force Exchange Service (AAFES) Car Care Center located on Hero Road at Fort Stewart, Georgia (**Figure 2-1 and 2-2**). Detailed site history can be found in the February 2009 report prepared by J2 Engineering, Inc (J2) titled, “Final Ninth Semi-Annual Remedial Monitoring Report for the Corrective Action at Underground Storage Tanks 257-261, Facility Identification Number #9-089118, Building 430, Fort Stewart, Georgia.”

2.1 Local and Site Hydrology

The Corrective Action Plan – Part B (CAP B) submitted by SAIC in January 2000, contains the local and site hydrogeology for this site (pages 14-18). The updated potentiometric flow map for November 2012 is displayed on **Figure 2-3**. The general direction of groundwater flow is toward the east to northeast. **Table 2-1** portrays the historic groundwater elevation data.

2.2 Extent of Contamination

The baseline assessment data can be found in the CAP B submitted by SAIC from January 2000 (pages 8-14). Currently, benzene is the only contaminant of concern above site Alternative Cleanup Levels (ACLs). The ACL for groundwater at the site is 713 µg/L for benzene. **Figure 2-4** displays the benzene contamination plume for the November 2012 sampling event. **Table 2-2** summarizes the historical groundwater quality results from May 2010 thru November 2012. The general extent of benzene groundwater quality contamination onsite has significantly reduced since the baseline sampling event in March 2002, however persistent concentrations of benzene have been detected near the locations of wells MW76-19, MW76-21, and MW76-43 through the monitoring period. A review of groundwater data collected during November 2012 indicates the maximum dissolved benzene concentrations detected were 820 µg/L in MW76-19, 3,400 µg/L in MW76-21, and 4,900 µg/L in MW76-43. Due to persistent benzene concentrations remaining above ACLs, additional field work and remedial efforts are necessary to ensure an optimal remedial strategy for site closeout.

3.0 Remedial Action Plan

3.1 Corrective Action Completed

The CAP B submitted by SAIC in January 2000 contains the previous corrective action completed for the AAFES Car Care Center site (page 19). Onsite remedial activities commenced on September 9, 2002 after completion of site remedial construction activities and the receipt of a GAEPD discharge permit. The Groundwater Pump and Treat, Air Sparge (AS), and Soil

Vapor Extraction (SVE) remedial systems employed onsite were designed to mitigate groundwater and soil quality contamination related to historical petroleum releases. J2 commenced with active remedial system operation on September 9, 2002 and discontinued active remedial efforts on August 2, 2007. After the completion of active remedial efforts, quarterly monitored natural attenuation was initiated at the site. A Revised CAP Part B was submitted in February 2010 by J2.

To expedite efforts to achieve the CAP Part B objectives, subsequent remedial technologies were implemented to address residual contamination within the soil and groundwater. A task order was awarded to perform sodium persulfate injection cleanup in order to address the residual benzene contamination in the soil smear zone near the water table interface at the site. After two injection events conducted during May and August of 2010, the effectiveness of this remediation approach displayed diminished expectations, requiring re-evaluation and optimization of a new technical strategy to closeout this site. Vertical profile soil borings and subsequent soil sampling were completed as part of the previous task order to further define site conditions. Additional groundwater monitoring was also conducted to further assess the extent of the residual benzene plume. Data collected during this phase of the supplemental assessment activities was used to formulate a revised remedial approach for the site.

3.2 Objectives of Corrective Action

The ACL for benzene in groundwater was set at 713 µg/L during the original CAP B investigation. Currently, benzene remains above the ACL; therefore, active remediation of the groundwater at the site is required. As previously stated, MNA and ISCO injection activities did not yield favorable remedial performance results. The objectives of the revised corrective action are as follows:

- Perform soil sampling to fully delineate the vertical and horizontal extent of soil contamination upon which the limits of the soil excavation will be set.
- Perform the soil excavation, which will be preceded by the demo of the canopy structure and abandoning wells within excavation boundaries.
- Perform groundwater monitoring after the monitoring wells have been re-installed to assess the site for regulatory closure.

3.2.1 Supplemental Soil Delineation

Soil sampling efforts were conducted from January 2-5, 2013 to fully delineate the petroleum plume in the groundwater (**Figure 2-4**) and soil associated with the former USTs and pump islands at the AAFES facility. Seneca-J2 performed a soil investigation around Building 430 near the location of the persistent groundwater contaminant plume (**Figures 3-2 and 3-3**). As part of this supplemental assessment, sixteen (16) soil borings were advanced to 15 ft below ground surface (bgs) at the locations presented on **Figures 3-2 and 3-3**. The sixteen (16) soil borings were advanced using direct push technology (DPT) with a GeoProbe operated by Zebra Environmental Corporation (Zebra), a Georgia certified drilling company. Two (2) soil samples were collected at each boring location to determine the extents of contamination. All of the soil samples were screened in the field with a flame-activated MicroFID to detect organic vapors, and these readings can be found on **Table 3-1**. Soil samples were analyzed for VOCs per EPA Method 8260B, PAHs per EPA Method 8270C, and TAL Metals per EPA Method 6010B by ALS Environmental (ALS) in Jacksonville, FL. The soil boring logs are presented in **Appendix A**.

Upon review of the soil boring logs, the area beneath the canopy is capped with concrete pavements, and the remainder of the site is capped with asphalt pavements. Beneath the surface pavements, fine sand and clayey sands are encountered, which are most likely imported fill materials. Beneath the upper fill materials, fine to very fine-grained well graded sands are encountered from seven (7) to ten (10) ft bgs. These soils were slightly damp to dry, and they are encountered above the local water table interface. Beneath the upper fine-grained deposits, very dark silty fine sands were encountered from roughly thirteen (13) to over fourteen (14) ft bgs. Soils within this zone displayed wet to very saturated moisture contents, and these soils comprise the localized shallow aquifer and smear zone. Below these deposits, a very hard partially-cemented medium to fairly coarse-grained reddish-brown sand layer was encountered, which displayed significantly reduced moisture contents. The contact between the upper smear zone deposits and the underlying deposits (hardpan) was observed to be very sharp and distinct at all soil boring locations. Due to the extreme variability related with the moisture of the sediments, it is highly likely that the shallow groundwater encountered at the site is perched above the local hardpan deposits. In general, field screening results sharply decreased or were not present within the underlying hardpan deposits suggesting that these sediments may have limited the vertical migration of the contaminants of concern to the upper smear zone deposits. Soil Boring Logs for all of the supplemental soil boring locations are presented in **Appendix A**.

3.2.2 Supplemental Soil Sampling Analyses

Seneca-J2 collected soil samples for laboratory analyses from depths ranging from 4 ft to 15 ft bgs. The results were compared to the GAEPD GUST Table A Standards for Average or Higher Groundwater Pollution Susceptibility Area per GUST Rule 391-3-15-09(3) and six (6) of the soil borings exceeded the standards for BTEX concentrations. The allowable standards for benzene, toluene, ethylbenzene, and xylenes are 5 micrograms per kilogram ($\mu\text{g}/\text{kg}$), 400 $\mu\text{g}/\text{kg}$, 370 $\mu\text{g}/\text{kg}$, and 20,000 $\mu\text{g}/\text{kg}$, respectively. There are no standards for SVOCs or TAL Metals.

The following discussion of soil samples reference only those that displayed concentrations of BTEX over the soil standards set forth in GAEPD GUST Table A. Soil sample B430-B-3 (5'-7.5') contained concentrations of benzene (10.4 $\mu\text{g}/\text{kg}$), and B430-B-3 (7.5'-10') contained concentrations of benzene (340 $\mu\text{g}/\text{kg}$), toluene (2,810 $\mu\text{g}/\text{kg}$), ethylbenzene (834 $\mu\text{g}/\text{kg}$), and xylenes (33,700 $\mu\text{g}/\text{kg}$). Soil sample B430-B-4 (10'-12.5') displayed concentrations of benzene (857 $\mu\text{g}/\text{kg}$), toluene (1,270 $\mu\text{g}/\text{kg}$), and ethylbenzene (1,090 $\mu\text{g}/\text{kg}$). Soil sample B430-B-6 (12.5'-15') exhibited concentrations of benzene (16.4 $\mu\text{g}/\text{kg}$). Soil sample B430-B-7 (7.5'-10') contained concentrations of benzene (183 $\mu\text{g}/\text{kg}$), toluene (4,380 $\mu\text{g}/\text{kg}$), ethylbenzene (1,320 $\mu\text{g}/\text{kg}$), and xylenes (89,500 $\mu\text{g}/\text{kg}$). Soil sample B430-B-11 (7.5'-10') demonstrated concentrations of benzene (18.8 $\mu\text{g}/\text{kg}$) and ethylbenzene (541 $\mu\text{g}/\text{kg}$), and B430-B-11 (10'-12.5') demonstrated concentrations of ethylbenzene (1,200 $\mu\text{g}/\text{kg}$). Soil sample B430-B-12 (12.5'-15') exhibited concentrations of benzene (579 $\mu\text{g}/\text{kg}$) and ethylbenzene (865 $\mu\text{g}/\text{kg}$). Benzene concentration maps for the soils above the water table and below the water table are shown in **Figures 3-2** and **3-3**. The soil analytical results are provided on **Table 3-2**, and the hardcopy analytical data can be found in **Appendix B**. The data validation was performed by HSW Engineering, and the Quality Control Summary Checklist is presented in **Appendix C**.

3.2.3 Abandoned Monitoring Wells and AS/SVE Points

Prior to excavation activities, all wells within the excavation area will be abandoned with $\frac{1}{4}$ inch bentonite pellets. The following monitoring wells were abandoned during January 2013:

MW76-32, MW76-19, MW76-33, MW76-42, MW76-43, MW76-44, and MW76-18. The following air sparge/extraction well/soil vapor extraction points were abandoned in January 2013: 76-AS1, 76-EX1, 76-SV1, 76-AS3, 76-AS9, and 76-AS8. In addition to these wells all of the chemical injection points were abandoned and filled with bentonite. During February 2013, MW76-45 will be abandoned, along with the following list of air sparge/extraction well/soil vapor extraction points: 76-AS2, 76-EX2, 76-EX3, 76-AS5, 76-SV2, 76-AS4, 76-AS6, 76-EX4, 76-AS7, 76-AS10, 76-EX5, 76-SV3, 76-AS11, and 76-AS12. **Figure 3-4** presents the locations of all of the above-referenced points.

3.3 Corrective Action In Progress

3.3.1 Canopy Removal

Upon approval of this CAP B Addendum, Seneca-J2 will contract CDI Group USA (CDI) of Fort Pierce, Florida to demolish the canopy located over the proposed excavation area and properly dispose of the debris. After contacting Georgia Utilities Protection Center (UPC) for the clearing/marketing of utilities, Seneca-J2 will perform or arrange for these additional activities:

- Locate all utility services and lines that may need to be shut off and capped or relocated temporarily or permanently depending on the nature of the job.
- Locate all overhead power lines that may interfere with heavy equipment operations.
- De-energize electrical service to canopy.
- Turn off water service to canopy, or conduct outage to allow Seneca-J2 to cap service, if valves are unavailable.
- Remove all underground utilities to the canopy.
- Post the telephone numbers of the local police, ambulance, and fire departments onsite.

Prior to the start of all demolition projects, OSHA Standard 1926.850(a) requires that a competent person will conduct an engineering survey of the structure to determine the condition of the framing and walls so that measures can be taken, if necessary, to prevent premature collapse of any portion of the structure. During the course of the physical demolition efforts, all work areas and passageways in and around each of the buildings shall be kept clear of debris. Demolition materials shall be stored in an orderly manner. All materials will be live loaded into dumpsters or into dump trucks and hauled offsite for disposal. The essential elements of good housekeeping are as follows:

- Orderly placement of materials, tools, and equipment.
- Placing receptacles at appropriate locations for the disposal of miscellaneous rubbish and debris.
- Prompt removal and disposal of trash and waste materials.

Any materials that can be recycled, such as concrete or piping, will be segregated. Seneca-J2 will recycle material only if there are no hazardous materials or if the materials can be safely separated from the remainder of the debris and disposed of properly. As much of the demolition as possible will be performed mechanically. Lights and ballast (if PCB impacted) removed from the canopy will be properly containerized, disposed offsite at an approved facility licensed to accept such wastes, and manifested.

3.3.2 Soil Excavation

The apparent source of benzene contamination in the groundwater is due to the residual soil contamination associated with the former fuel dispenser islands and former product transmission lines beneath the overhead canopy structure. The chosen remedial action is removal of contaminated soils in order to restore groundwater to original conditions. After the canopy is removed, CDI will install temporary sheet piling near the southwestern perimeter of Building 430 to prevent undermining of the building structure during excavation. The remaining contaminated soil will be excavated and live loaded into dump trucks for transport to Broadhurst Environmental Landfill (Solid Waste Permit #151-014D (SL)) located in Screven, Georgia.

Confirmatory samples will be collected from the wall and base of the excavation pit on twenty (20) ft centers to ensure that all of the contaminated soil is removed. Data collected from the supplementary soil boring assessment activities will be used as a guide to outline the proposed excavation area (**Figures 3-2 and 3-3**). Seneca-J2 and their subcontractors will supply the equipment, material, and labor to perform the excavation of a total area of 6,400 ft² of contaminated soils from ground surface to approximately fifteen (15) ft bgs. An area of approximately 10,000 ft² of concrete/asphalt surface will be removed and disposed of properly. The upper five (5) ft of soil shall be excavated and stored onsite for re-use as clean backfill, which will be tested on a 24-hr turnaround time basis from ALS in Jacksonville, FL. A total of approximately 2,378 yd³ of contaminated soils shall be transported offsite and disposed of as non-hazardous waste. Excavation sides that are not shored will be sloped and benched at a minimum of one and half feet horizontal slope to one foot vertical to ensure stability

Prior to and during soil excavation and backfilling efforts, a groundwater extraction system consisting of up to thirty-six (36) 1-inch diameter wells installed to twenty (20) ft bgs will be installed to remove the groundwater from the excavation area. Groundwater pumped from the excavation pit will be routed to two (2) frac tanks that will be located near the existing remedial equipment shed onsite. Water containerized within the frac tanks will be routed through a series of high capacity bag filters to remove suspended sediments before going through the existing groundwater treatment system. The existing remedial treatment system is equipped with supplemental bag filtration and a 30 gallon per minute (gpm) air stripper. GAEPD has reactivated the former underground injection permit for temporary operation of the system (UIC Permit #R-156 presented in **Appendix D**). After water is processed through the air stripper, it will be routed through two (2) 1,000-pound activated carbon vessels in series and then to the local reinfiltration gallery for disposal. During operation of the water treatment system, samples of the following will be collected for every 20,000 gallons: the gross influent, after the air stripper, between the carbon banks, and the effluent. These system samples will be analyzed for BTEX and PAH compounds.

At the end of the excavation activities, 1,600 lbs of ORC®-Adv pellets will be spread at the bottom of the excavation pit. Backfill material will be dependent on site conditions and groundwater recharge rates. If feasible, the excavation will be filled with clean backfill material in 12-inch lifts to 95% bulk density compaction. Otherwise, the bottom 5 ft of the excavation may be backfilled with gravel, followed by clean backfill material compacted in 12-inch lifts. After all of the 12-inch backfill lifts are verified as receiving 95% compaction, the surface of this excavation backfill will be crowned to provide positive drainage. The surface will be finished with a minimum of six (6) inches of crusher run limestone base (compacted to Georgia DOT

specification density for heavy pavement) and 1.5 – 2.0 inches of bituminous asphalt pavement (E, or F mix).

Table 3-3 presents the preliminary field schedule and sequence of field events provided by CDI for the recommended remedial efforts following GAEPD concurrence with the CAP Addendum and issuance of the reinstated injection permit for the existing groundwater treatment system.

After excavation, backfilling, and site restoration efforts have been completed, Zebra will install up to five (5) replacement monitoring wells of equivalent depth, location, screening, and material as the original monitor wells within the excavation area. All monitoring wells will be installed as 2-inch diameter PVC wells with 10 ft of 0.010 slot screen to bracket the water table ten (10) ft bgs. All of the wells will be installed with a silica sand pack, a bentonite seal, grouted to the surface, and set in sealed flush mounted protectors.

3.3.3 Performance Monitoring

Performance monitoring will involve up to fifteen (15) monitoring wells to be sampled on a quarterly basis for one (1) year. All quarterly samples will be analyzed for BTEX using EPA Method 8260B. During sampling events, groundwater depths will be collected from all of the monitoring wells and used to calculate purge volumes and evaluate local groundwater flow conditions. During well purging, groundwater parameters will be collected including water depth, pH, temperature, conductivity, DO, ORP, iron, and/or sulfate. These parameters will be measured to evaluate on-going chemical oxidation processes and to assess monitored natural attenuation of the plume. The parameters will be measured in the field with down hole multi-parameter meters and field test kits

Following each of the four (4) quarterly sampling events, the data will be presented in a Corrective Action Progress Report. After one year of quarterly monitoring, twelve (12) monitoring wells will be sampled on a semi-annual basis for one (1) year. All semi-annual samples will be analyzed for BTEX using EPA Method 8260B and PAHs per EPA Method 8270C. Following each of the two (2) sampling events, the data will be presented in a Corrective Action Progress Report. All wells onsite will be abandoned following site closure with regulatory approval

3.3.4 Progress Reporting

The findings from each monitoring event will be summarized in a monitoring report prepared in general accordance with the GAEPD CAP B Progress Report Template. Updated potentiometric surface maps, BTEX plume maps, and relevant tables will be included within each report. Concentration versus time graphs will also be provided if helpful in determining seasonal contaminant fluctuation versus migration. Each monitoring report will be submitted approximately 60 days from the date of the sampling event.

A description of the groundwater parameters and the results of the confirmatory sampling will be summarized in the completion report for this site.

3.3.5 Completion Criteria

If during the two (2) years of monitoring, the existing concentration of benzene detected at MW76-21 and the concentration of benzene in the immediate down gradient well remains below the ACL (713 µg/L), then GAEPD and Fort Stewart should evaluate the site for closure.

Within 30 days of submitting the final progress/completion report, the following certification will be submitted to GAEPD:

I hereby certify that the Corrective Action Plan-Part B dated _____ for Fort Stewart USTs 257-261 site, Facility ID #9-089118, including any and all certified amendments thereto, has been implemented in accordance with the schedules, specifications, sampling programs, and conditions contained therein, and that the plan's stated objective have been met.

Signature (Owner/Operator)

Upon receipt of an agreement from GAEPD for NFA at this site, all wells onsite will be decommissioned/closed.

3.4 Public Notification

Public notification requirements were addressed in the CAP B submitted by SAIC dated January 2000 for the AAFES Car Care Center site (page 32).

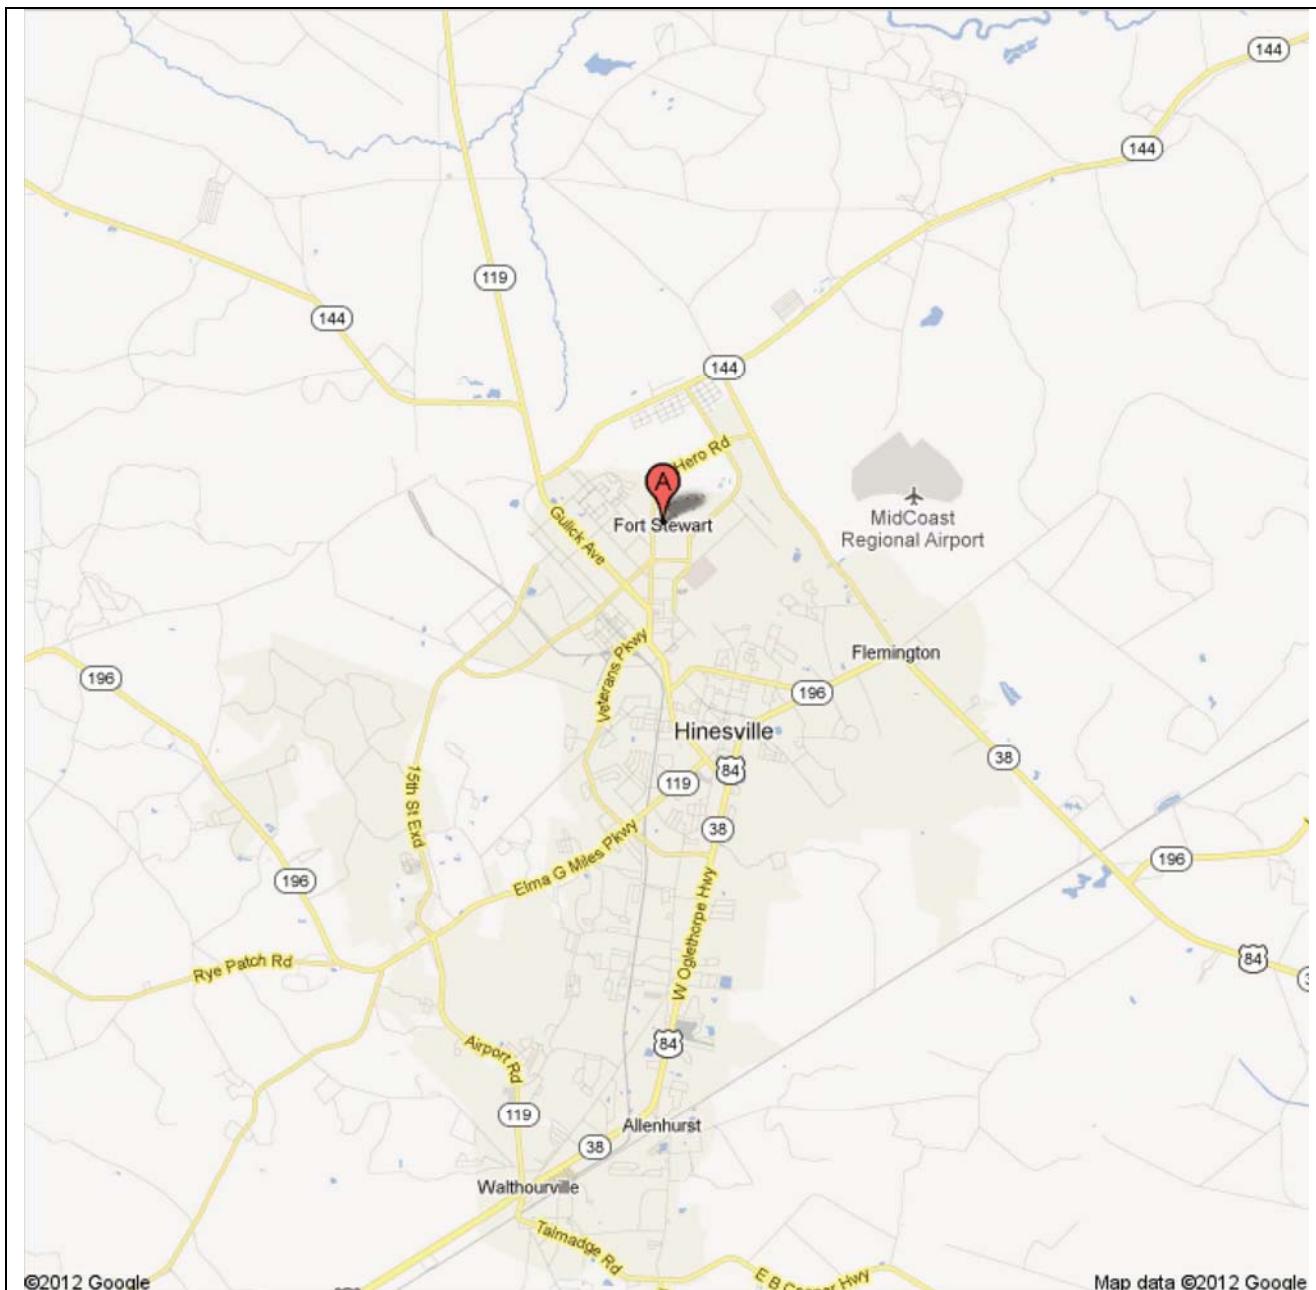

4.0 Claim for Reimbursement

Application for Georgia UST Trust Fund reimbursement is not being pursued at this time.

SOIL BENZENE CONCENTRATIONS (ABOVE WATER TABLE)
JANUARY 2013
UST's 257-261, BUILDING 430
FACILITY ID # 9-089118
FORT STEWART, GEORGIA

**LEGEND**

- B-17 SOIL BORING
- MW MONITORING WELL
- D MW DEEP MONITORING WELL
- 5 BENZENE CONCENTRATION CONTOUR LINE ($\mu\text{g}/\text{kg}$)
- FENCE

BENZENE CONCENTRATIONS

- (U) - COMPOUND ANALYZED FOR BUT NOT DETECTED
- (J) - ESTIMATED VALUE
- ($\mu\text{g}/\text{kg}$) - MICROGRAMS PER KILOGRAM
- APPLICABLE STANDARDS = 5 ($\mu\text{g}/\text{kg}$)

BOLD INDICATES BENZENE LEVELS ABOVE GEORGIA EPD GUST TABLE A STANDARDS

NOTE: DRAWING IN COLOR.

AAFES Car Care Center
 Underground Storage Tank No. 257-261
 Fort Stewart, Georgia
 Contractor: Seneca J2 Environmental Joint Venture
 Contract No. W912HN-12-D-0022-0008
 Contract Period: September 27, 2012 through July 18, 2016

Table 3-3 Proposed Schedule

| Activity | Day of work |
|--|-------------|
| Mobilize crew and equipment to job site. | Day 1 |
| Install fence and saw-cut pavement. | Day 2 |
| Demo canopy and cut into pieces for scrap dealer. Hot work permit will be needed. | Day 3 |
| Load pavement for C&D disposal. Excavate 5 ft trench for sheeting, move water line behind sheeting, and begin to drive sheeting. | Day 4 |
| Finish installing sheeting and begin the install of the dewatering system. | Day 5 |
| Install piping to frac tanks, carbon polishing system, and infiltration gallery. | Day 6 |
| Start dewatering system and excavate 5 ft of soil from the hot zone. | Day 7 |
| Excavate, load, transport, and dispose of contaminated soil. | Day 8 |
| Continue soil excavation. | Day 9 |
| Backfill excavation to 95% standard Proctor using remote controlled compactor. | Day 10 |
| Continue backfilling operation and stop dewatering system. | Day 11 |
| move sheeting and dewatering system, finish backfill operation, and fine grade for new pavem | Day 12 |
| Begin asphalt pavement installation. | Day 13 |
| Finish asphalt pavement installation. | Day 14 |
| Demobilize equipment and fencing. | Day 15 |
| Float day scheduled for weather and/or unforeseen complications. | Day 16 |

Tampa, FL 33635

Laboratory Results for: AAFES Ft. Stewart

Dear Fred,

Enclosed are the results of the sample(s) submitted to our laboratory January 04, 2013
For your reference, these analyses have been assigned our service request number **J1300077**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. In accordance to the NELAC 2003 Standard, a statement on the estimated uncertainty of measurement of any quantitative analysis will be supplied upon request.

Please contact me if you have any questions. My extension is 4409. You may also contact me via email at Craig.Myers@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

A handwritten signature in black ink, appearing to read "Craig Myers".

Data Qualifiers

CAS Standard

- + Possible Tedlar bag artifact.
- A TIC is a suspected aldol-condensation product
- B Analyte found in the associated method blank as well as in the sample.
- BC Reported results are not blank corrected.
- BH The back section of the tube yielded higher results than the front.
- BT Results indicated possible breakthrough; back section $\geq 10\%$ front section.
- C Result identification confirmed.
- D Compound identified in an analysis at a secondary dilution factor
- D Spike was diluted out
- DE Reported results are corrected for desorption efficiency.
- E Estimated value. Concentration above calibration range
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- H1 Sample analysis performed past holding time. See case narrative.
- H2 Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
- H3 Sample was received and analyzed past holding time.
- H4 Sample was extracted past required extraction holding time, but analyzed within analysis holding time. See case narrative.
- I Internal standard not within the specified limits. See case narrative.
- J Estimated Value. Concentration found below MRL.
- K A deflection in the QC ion may indicate interference with the quantitation of this ion. The concentration of this analyte should be considered as an estimate.
- K Analyte was detected above the method reporting limit prior to normalization.
- L1 Laboratory control sample recovery outside the specified limits; results may be biased high.
- L2 Laboratory control sample recovery outside the specified limits; results may be biased low.
- L3 Laboratory control sample recovery outside the specified limits.
- M Matrix interference; results may be biased high.
- M The duplicate injection precision not met.
- M1 Matrix interference due to coelution with a non-target compound; results may be biased high.
- N Presumptive evidence of a compound for TICs that have been identified based on a mass spectral library search.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- P Indicates chlorodiphenyl ether interference present at the retention time of the target compound.
- P Pesticide/Aroclor target analyte $> 40\%$ difference for detected concentrations between GC columns
- Q Indicates as estimated value because the P and P + 2 theoretical abundance ratio does not meet method criteria.
- R Duplicate Precision not met.
- R1 Duplicate precision not within the specified limits; however, the results are below the MRL and considered estimated.
- S Surrogate recovery not within specified limits.

Data Qualifiers

CAS Standard

- S The reported value was determined by the Method of Standard Additions (MSA).
- T Analyte is a tentatively identified compound, result is estimated.
- U Compound was analyzed for, but was not detected (ND).
- V1 The continuing calibration verification standard was outside (biased high) the specified limits for this compound.
- V2 The continuing calibration verification standard was outside (biased low) the specified limits for this compound.
- W Result quantified, but the corresponding peak was detected outside the generated retention time window.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- X See case narrative.
- Y Recovery outside limits
- Y The chromatogram resembles a petroleum product but does not match the calibration standard.
- Z The chromatogram does not resemble a petroleum product.
 - i The MRL/MDL has been elevated due to a matrix interference.

Acronyms

| | |
|------------|--|
| ASTM | American Society for Testing and Materials |
| A2LA | American Association for Laboratory Accreditation |
| CARB | California Air Resources Board |
| CAS Number | Chemical Abstract Service registry Number |
| CFC | Chlorofluorocarbon |
| CFU | Colony-Forming Unit |
| DEC | Department of Environmental Conservation |
| DEQ | Department of Environmental Quality |
| DHS | Department of Health Services |
| DOE | Department of Ecology |
| DOH | Department of Health |
| EPA | U. S. Environmental Protection Agency |
| ELAP | Environmental Laboratory Accreditation Program |
| GC | Gas Chromatography |
| GC/MS | Gas Chromatography/Mass Spectrometry |
| LUFT | Leaking Underground Fuel Tank |
| M | Modified |
| MCL | Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA. |
| MDL | Method Detection Limit |
| MPN | Most Probable Number |
| MRL | Method Reporting Limit |
| NA | Not Applicable |
| NC | Not Calculated |
| NCASI | National Council of the Paper Industry for Air and Stream Improvement |
| ND | Not Detected |
| NIOSH | National Institute for Occupational Safety and Health |
| PQL | Practical Quantitation Limit |
| RCRA | Resource Conservation and Recovery Act |
| SIM | Selected Ion Monitoring |
| TPH | Total Petroleum Hydrocarbons |
| tr | Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL. |

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Laboratory Results for: AAFES Ft. Stewart

Dear Fred,

Enclosed are the results of the sample(s) submitted to our laboratory January 04, 2013
For your reference, these analyses have been assigned our service request number **J1300078**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. In accordance to the NELAC 2003 Standard, a statement on the estimated uncertainty of measurement of any quantitative analysis will be supplied upon request.

Please contact me if you have any questions. My extension is 4409. You may also contact me via email at Craig.Myers@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Data Qualifiers

CAS Standard

- + Possible Tedlar bag artifact.
- A TIC is a suspected aldol-condensation product
- B Analyte found in the associated method blank as well as in the sample.
- BC Reported results are not blank corrected.
- BH The back section of the tube yielded higher results than the front.
- BT Results indicated possible breakthrough; back section $\geq 10\%$ front section.
- C Result identification confirmed.
- D Compound identified in an analysis at a secondary dilution factor
- D Spike was diluted out
- DE Reported results are corrected for desorption efficiency.
- E Estimated value. Concentration above calibration range
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- H1 Sample analysis performed past holding time. See case narrative.
- H2 Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
- H3 Sample was received and analyzed past holding time.
- H4 Sample was extracted past required extraction holding time, but analyzed within analysis holding time. See case narrative.
- I Internal standard not within the specified limits. See case narrative.
- J Estimated Value. Concentration found below MRL.
- K A deflection in the QC ion may indicate interference with the quantitation of this ion. The concentration of this analyte should be considered as an estimate.
- K Analyte was detected above the method reporting limit prior to normalization.
- L1 Laboratory control sample recovery outside the specified limits; results may be biased high.
- L2 Laboratory control sample recovery outside the specified limits; results may be biased low.
- L3 Laboratory control sample recovery outside the specified limits.
- M Matrix interference; results may be biased high.
- M The duplicate injection precision not met.
- M1 Matrix interference due to coelution with a non-target compound; results may be biased high.
- N Presumptive evidence of a compound for TICs that have been identified based on a mass spectral library search.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- P Indicates chlorodiphenyl ether interference present at the retention time of the target compound.
- P Pesticide/Aroclor target analyte $> 40\%$ difference for detected concentrations between GC columns
- Q Indicates as estimated value because the P and P + 2 theoretical abundance ratio does not meet method criteria.
- R Duplicate Precision not met.
- R1 Duplicate precision not within the specified limits; however, the results are below the MRL and considered estimated.
- S Surrogate recovery not within specified limits.

Data Qualifiers

CAS Standard

- S The reported value was determined by the Method of Standard Additions (MSA).
- T Analyte is a tentatively identified compound, result is estimated.
- U Compound was analyzed for, but was not detected (ND).
- V1 The continuing calibration verification standard was outside (biased high) the specified limits for this compound.
- V2 The continuing calibration verification standard was outside (biased low) the specified limits for this compound.
- W Result quantified, but the corresponding peak was detected outside the generated retention time window.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- X See case narrative.
- Y Recovery outside limits
- Y The chromatogram resembles a petroleum product but does not match the calibration standard.
- Z The chromatogram does not resemble a petroleum product.
 - i The MRL/MDL has been elevated due to a matrix interference.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Laboratory Results for: AAFES Ft. Stewart

Dear Fred,

Enclosed are the results of the sample(s) submitted to our laboratory January 04, 2013
For your reference, these analyses have been assigned our service request number **J1300079**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. In accordance to the NELAC 2003 Standard, a statement on the estimated uncertainty of measurement of any quantitative analysis will be supplied upon request.

Please contact me if you have any questions. My extension is 4409. You may also contact me via email at Craig.Myers@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Columbia Analytical Services, Inc.

Part of the ALS Group A Campbell Brothers Limited Company

Client: J2 Engineering
Project: AAFES Ft. Stewart/12-052
Sample Matrix: Soil

Service Request: J1300079
Date Received: 1/4/13

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables, including results of QC samples analyzed from this delivery group. When appropriate to the procedure, method blank results have been reported with each analytical test. Analytical procedures performed by the lab are validated in accordance with NELAC standards. Parameters that are included in the NELAC Fields of Testing but are not included in the lab's NELAC accreditation are identified in the discussion of each analytical procedure.

Sample Receipt

Two water samples, twenty-two soil samples, and one trip blank were received for analysis at ALS Environmental on 1/4/13. The samples were received in good condition and consistent with the accompanying chain of custody form. Samples are refrigerated at $\leq 6^{\circ}\text{C}$ upon receipt at the lab except for aqueous samples designated for metals analyses, which are stored at room temperature.

Volatile Organic Analyses:

Method 8260B: The control criteria were exceeded for the following surrogate in sample J1300079-022 due to matrix interference: 4-Bromofluorobenzene. No further corrective action was required.

Method 8260B: The matrix spike recoveries of several analytes for sample J1300079-023 were outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential bias in this matrix. No further corrective action was appropriate.

Semi-Volatile Organic Analyses:

Method 8270C SIM: The control criterion was exceeded for the following surrogate in sample J1300079-013 due to matrix interference: p-Terphenyl-d14. A re-extraction and reanalysis was performed, but produced similar results. The results of the original analysis are reported. No further corrective action was required.

Method 8270C SIM: The matrix spike recoveries of several analytes for sample J1300079-007 were outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential bias in this matrix. No further corrective action was appropriate.

Method 8270C SIM: Sample J1300079-004 required dilution due to the presence of matrix that interfered with internal standard recovery of Perylene-d12. Samples J1300079-013 and J1300079-015 required dilution due to the presence of matrix that interfered with internal standard recovery of Chrysene-d12. Sample J1300079-020 required dilution due to the presence of matrix that interfered with internal standard recoveries of Perylene-d12 and Chrysene-d12. The reporting limits are adjusted to reflect the dilution.

Metals Analyses:

No significant data anomalies were noted with this analysis.

General Chemistry Analyses:

Approved by

A handwritten signature in black ink, appearing to read "Amy R. Raley".

Date 1/17/2013

No significant data anomalies were noted with this analysis.

Data Qualifiers

CAS Standard

- + Possible Tedlar bag artifact.
- A TIC is a suspected aldol-condensation product
- B Analyte found in the associated method blank as well as in the sample.
- BC Reported results are not blank corrected.
- BH The back section of the tube yielded higher results than the front.
- BT Results indicated possible breakthrough; back section $\geq 10\%$ front section.
- C Result identification confirmed.
- D Compound identified in an analysis at a secondary dilution factor
- D Spike was diluted out
- DE Reported results are corrected for desorption efficiency.
- E Estimated value. Concentration above calibration range
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- H1 Sample analysis performed past holding time. See case narrative.
- H2 Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
- H3 Sample was received and analyzed past holding time.
- H4 Sample was extracted past required extraction holding time, but analyzed within analysis holding time. See case narrative.
- I Internal standard not within the specified limits. See case narrative.
- J Estimated Value. Concentration found below MRL.
- K A deflection in the QC ion may indicate interference with the quantitation of this ion. The concentration of this analyte should be considered as an estimate.
- K Analyte was detected above the method reporting limit prior to normalization.
- L1 Laboratory control sample recovery outside the specified limits; results may be biased high.
- L2 Laboratory control sample recovery outside the specified limits; results may be biased low.
- L3 Laboratory control sample recovery outside the specified limits.
- M Matrix interference; results may be biased high.
- M The duplicate injection precision not met.
- M1 Matrix interference due to coelution with a non-target compound; results may be biased high.
- N Presumptive evidence of a compound for TICs that have been identified based on a mass spectral library search.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- P Indicates chlorodiphenyl ether interference present at the retention time of the target compound.
- P Pesticide/Aroclor target analyte $> 40\%$ difference for detected concentrations between GC columns
- Q Indicates as estimated value because the P and P + 2 theoretical abundance ratio does not meet method criteria.
- R Duplicate Precision not met.
- R1 Duplicate precision not within the specified limits; however, the results are below the MRL and considered estimated.
- S Surrogate recovery not within specified limits.

Data Qualifiers

CAS Standard

- S The reported value was determined by the Method of Standard Additions (MSA).
- T Analyte is a tentatively identified compound, result is estimated.
- U Compound was analyzed for, but was not detected (ND).
- V1 The continuing calibration verification standard was outside (biased high) the specified limits for this compound.
- V2 The continuing calibration verification standard was outside (biased low) the specified limits for this compound.
- W Result quantified, but the corresponding peak was detected outside the generated retention time window.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- X See case narrative.
- Y Recovery outside limits
- Y The chromatogram resembles a petroleum product but does not match the calibration standard.
- Z The chromatogram does not resemble a petroleum product.
 - i The MRL/MDL has been elevated due to a matrix interference.

BTEXX benzene, toluene, ethylbenzene, m,p-xylenes, and o-xylene

PAHs polynuclear aromatic hydrocarbons

Metals Target Analyte List (TAL)

Data were reviewed by manually reviewing the read-only electronic data reports, supplemented with an electronic review of numeric data reported in laboratory electronic data deliverables (EDDs). The data review criteria and status of each are summarized below. A summary of qualified data is included as a separate table at the end of this report.

Data Review Checklist

| Data Review Item | Comment | | One or More Results | |
|---|-----------|----------|--|---|
| | Qualified | Rejected | | |
| 1. All samples in acceptable condition upon receipt? | Y | | | |
| 2. All cooler temperatures acceptable at the time of receipt? | Y | | All coolers received at $\leq 5.7^{\circ}\text{C}$. | |
| 3. pH of all preserved samples acceptable? | Y | | (Applicable to field-generated blanks only) | |
| 4. All samples logged in correctly / log-in issues resolved? | Y | | | |
| 5. Analytical data received on time? | Y | | | |
| 6. Laboratory narrative acceptable? | Y | | | |
| 7. All required holding times met? | Y | | | |
| 8. Required analyses performed? | Y | | | |
| 9. All field-generated blanks free of target analytes, including Equipment blanks? | | N | Many target metals detected in both of the two equipment blanks, resulting in "B" qualifiers being applied to 75 results for metals. | Y |
| Field blanks? | | N | Many target metals detected in both of the two field blanks, resulting in "B" qualifiers being applied to 75 results for metals. | Y |
| Trip blanks? | Y | | No BTEXX detected in any of the three trip blanks. | |
| 10. All field duplicates indicate acceptable cumulative precision? | Y | | Overall acceptable agreement between paired results for the three samples collected in duplicate. | |
| 11. All laboratory method blanks free of target analytes? | | N | Several target metals detected in the laboratory method blanks, resulting in "B" qualifiers being applied to 80 results. | Y |
| 12. All LCS recoveries meet data review acceptance criteria? | Y | | | |

Data Review Checklist

| Data Review Item | Comment | | One or More Results | |
|---|---------|--|---------------------|----------|
| | | | Qualified | Rejected |
| 13. All MS / MSD analyses meet validation acceptance criteria? | N | Qualifications were made to five results (four detections, one non-detection) based on slightly low recoveries and to nine results (all detections) based on slightly high recoveries of the MS and / or MSD. Qualification was limited to results for the native, parent samples as it was believed that any adverse matrix effects could not reasonably be applied to other samples within the analytical batch. MS / MSD recoveries were not evaluated when the spiked amount was less than one-fourth the amount present in the native sample (i.e., when the spiked amount would have been obscured by routine analytical measurement uncertainty). | Y | |
| 14. All surrogate recoveries (organics analyses only) acceptable? | Y | Instances in which only a single surrogate was not within the laboratory's acceptance limits were not used to qualify sample data. | | |
| 15. Dilution factors acceptable? | Y | Dilution factors used were necessary and at the appropriate levels. Holding times were met in the reanalyses of diluted samples in all instances. | | |
| 16. All method detection limits (MDLs) acceptable? | -- | (Consistent with laboratory's current MDLs, except as precluded by dilution factors and percent solids content.) | | |
| 17. All method reporting limits (MRLs) acceptable? | -- | (Assumed so; consistent with laboratory's established MRLs, except as precluded by dilution factors and percent solids content.) | | |
| Additional Comments: A relatively large number of metals were detected in the field-generated blanks (FGBs; i.e., equipment blanks and field blanks) collected during this event, as well as in the laboratory method blanks. Due to the random and sporadic nature of this low level contamination and uncertainty as to the source, detections in laboratory method blanks were not used to qualify detections in FGBs as non-detections but were used as additional reasons for qualifying sample data. For this same reason (i.e., the uncertainty as to the source of contamination) as well as the short time in which the entire event took place, the results of all FGBs were used to qualify all sample results, regardless as to whether the FGB was collected on the same day as the sample. The on-instrument results were used for the evaluation so that the results for aqueous FGBs could be compared to results for soil samples, based on information provided by the laboratory as to the mass of soil sample analyzed and final volumes. | | | | |

LCS laboratory control sample

MS / MSD matrix spike / matrix spike duplicate

Table 2. Summary of Qualified Data

| Sample ID | Lab ID | Date Collected | Method | Analyte | Units | Reporting Limit | Detection Limit | Result | Lab Qualifier | Data Review Qualifier | Reason for Qualification |
|------------------|--------------|----------------|-----------|----------------------|-------|-----------------|-----------------|--------|---------------|-----------------------|---|
| B430-B-1 (4-6) | J1300077-001 | 01/02/2013 | 6010B | Antimony | mg/Kg | 0.54 | 0.08 | 0.32 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-1 (4-6) | J1300077-001 | 01/02/2013 | 6010B | Cadmium | mg/Kg | 0.27 | 0.008 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-1 (4-6) | J1300077-001 | 01/02/2013 | 6010B | Calcium | mg/Kg | 5.4 | 1.2 | 103 | | J+ | Recovery of the analyte in the MSD performed using this sample exceeds the upper control limit. |
| B430-B-1 (4-6) | J1300077-001 | 01/02/2013 | 6010B | Cobalt | mg/Kg | 0.54 | 0.05 | 0.11 | J | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-B-1 (4-6) | J1300077-001 | 01/02/2013 | 6010B | Manganese | mg/Kg | 0.54 | 0.009 | 4.98 | | J+ | Recovery of the analyte in the MSD performed using this sample exceeds the upper control limit. |
| B430-B-1 (4-6) | J1300077-001 | 01/02/2013 | 6010B | Sodium | mg/Kg | 27 | 2 | 15 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-1 (12-14) | J1300077-002 | 01/02/2013 | 6010B | Antimony | mg/Kg | 0.59 | 0.09 | 0.36 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-1 (12-14) | J1300077-002 | 01/02/2013 | 6010B | Cadmium | mg/Kg | 0.30 | 0.009 | 0.18 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-1 (12-14) | J1300077-002 | 01/02/2013 | 6010B | Manganese | mg/Kg | 0.59 | 0.010 | 0.65 | | B | Analyte detected in equipment blank B430-EB-01. |
| B430-B-1 (12-14) | J1300077-002 | 01/02/2013 | 6010B | Nickel | mg/Kg | 0.59 | 0.04 | 0.24 | J | J B | Analyte detected in laboratory method blanks and in equipment blank B430-EB-02 at comparable concentrations. |
| B430-B-1 (12-14) | J1300077-002 | 01/02/2013 | 6010B | Sodium | mg/Kg | 30 | 2 | 12 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-2 (5-7.5) | J1300077-003 | 01/02/2013 | 6010B | Antimony | mg/Kg | 0.51 | 0.08 | 0.31 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-2 (5-7.5) | J1300077-003 | 01/02/2013 | 6010B | Cadmium | mg/Kg | 0.26 | 0.008 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-2 (5-7.5) | J1300077-003 | 01/02/2013 | 6010B | Cobalt | mg/Kg | 0.51 | 0.05 | 0.51 | | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-B-2 (5-7.5) | J1300077-003 | 01/02/2013 | 6010B | Sodium | mg/Kg | 26 | 2 | 11 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-2 (5-7.5) | J1300077-003 | 01/02/2013 | 8270C SIM | Benzo(k)fluoranthene | ug/Kg | 3.18 | 2.40 | 9.49 | | J | Recoveries of the analyte in the MS / MSD analyses performed using this sample were less than the laboratory's lower acceptance limits. |

Table 2. Summary of Qualified Data

| Sample ID | Lab ID | Date Collected | Method | Analyte | Units | Reporting Limit | Detection Limit | Result | Lab Qualifier | Data Review Qualifier | Reason for Qualification |
|--------------------|--------------|----------------|-----------|------------------------|-------|-----------------|-----------------|--------|---------------|-----------------------|--|
| B430-B-2 (5-7.5) | J1300077-003 | 01/02/2013 | 8270C SIM | Indeno(1,2,3-cd)pyrene | ug/Kg | 3.18 | 2.20 | 23.9 | | J+ | Recovery of the analyte in the MS performed using this sample exceeds the upper control limit. |
| B430-B-2 (12.5-15) | J1300077-004 | 01/02/2013 | 6010B | Antimony | mg/Kg | 0.56 | 0.09 | 0.33 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-2 (12.5-15) | J1300077-004 | 01/02/2013 | 6010B | Cadmium | mg/Kg | 0.28 | 0.008 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-2 (12.5-15) | J1300077-004 | 01/02/2013 | 6010B | Manganese | mg/Kg | 0.56 | 0.010 | 0.50 | J | J B | Analyte detected in equipment blank B430-EB-01. |
| B430-B-2 (12.5-15) | J1300077-004 | 01/02/2013 | 6010B | Nickel | mg/Kg | 0.56 | 0.04 | 0.22 | J | J B | Analyte detected in laboratory method blanks and in equipment blank B430-EB-02 at comparable concentrations. |
| B430-B-2 (12.5-15) | J1300077-004 | 01/02/2013 | 6010B | Potassium | mg/Kg | 110 | 5 | 10 | J | J B | Analyte detected at comparable concentrations in equipment blank B430-EB-02 and field blanks B430-FB-01 and -02. |
| B430-B-2 (12.5-15) | J1300077-004 | 01/02/2013 | 6010B | Sodium | mg/Kg | 28 | 2 | 5 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-3 (5-7.5) | J1300077-005 | 01/02/2013 | 6010B | Antimony | mg/Kg | 0.51 | 0.08 | 0.30 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-3 (5-7.5) | J1300077-005 | 01/02/2013 | 6010B | Cadmium | mg/Kg | 0.25 | 0.008 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-3 (5-7.5) | J1300077-005 | 01/02/2013 | 6010B | Cobalt | mg/Kg | 0.51 | 0.05 | 0.56 | | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-B-3 (7.5-10) | J1300077-006 | 01/02/2013 | 6010B | Antimony | mg/Kg | 0.49 | 0.08 | 0.24 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-3 (7.5-10) | J1300077-006 | 01/02/2013 | 6010B | Cadmium | mg/Kg | 0.24 | 0.007 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-3 (7.5-10) | J1300077-006 | 01/02/2013 | 6010B | Potassium | mg/Kg | 97 | 4 | 13 | J | J B | Analyte detected at comparable concentrations in equipment blank B430-EB-02 and field blanks B430-FB-01 and -02. |
| B430-B-13 (5-7.5) | J1300078-001 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.50 | 0.08 | 0.30 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-13 (5-7.5) | J1300078-001 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.25 | 0.007 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-13 (5-7.5) | J1300078-001 | 01/04/2013 | 6010B | Cobalt | mg/Kg | 0.50 | 0.04 | 0.45 | J | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-B-13 (5-7.5) | J1300078-001 | 01/04/2013 | 6010B | Sodium | mg/Kg | 25 | 2 | 13 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |

Table 2. Summary of Qualified Data

| Sample ID | Lab ID | Date Collected | Method | Analyte | Units | Reporting Limit | Detection Limit | Result | Lab Qualifier | Data Review Qualifier | Reason for Qualification |
|---------------------|--------------|----------------|--------|-----------|-------|-----------------|-----------------|--------|---------------|-----------------------|--|
| B430-B-13 (10-12.5) | J1300078-002 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.54 | 0.08 | 0.43 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-13 (10-12.5) | J1300078-002 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.27 | 0.008 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-13 (10-12.5) | J1300078-002 | 01/04/2013 | 6010B | Sodium | mg/Kg | 27 | 2 | 10 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-15 (7.5-10) | J1300078-003 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.60 | 0.09 | 0.42 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-15 (7.5-10) | J1300078-003 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.30 | 0.009 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-15 (7.5-10) | J1300078-003 | 01/04/2013 | 6010B | Nickel | mg/Kg | 0.60 | 0.04 | 0.24 | J | J B | Analyte detected in laboratory method blanks and in equipment blank B430-EB-02 at comparable concentrations. |
| B430-B-15 (7.5-10) | J1300078-003 | 01/04/2013 | 6010B | Potassium | mg/Kg | 120 | 5 | 20 | J | J B | Analyte detected at comparable concentrations in equipment blank B430-EB-02 and field blanks B430-FB-01 and -02. |
| B430-B-15 (7.5-10) | J1300078-003 | 01/04/2013 | 6010B | Sodium | mg/Kg | 30 | 2 | 7 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-15 (12.5-15) | J1300078-004 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.56 | 0.09 | 0.51 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-15 (12.5-15) | J1300078-004 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.28 | 0.008 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-15 (12.5-15) | J1300078-004 | 01/04/2013 | 6010B | Sodium | mg/Kg | 28 | 2 | 4 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-DUP-03 | J1300078-005 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.61 | 0.09 | 0.67 | | B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-DUP-03 | J1300078-005 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.30 | 0.009 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-DUP-03 | J1300078-005 | 01/04/2013 | 6010B | Sodium | mg/Kg | 30 | 3 | 9 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-16 (5-7.5) | J1300078-008 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.55 | 0.09 | 0.33 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-16 (5-7.5) | J1300078-008 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.28 | 0.008 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |

Table 2. Summary of Qualified Data

| Sample ID | Lab ID | Date Collected | Method | Analyte | Units | Reporting Limit | Detection Limit | Result | Lab Qualifier | Data Review Qualifier | Reason for Qualification |
|-------------------------|--------------|----------------|--------|-----------|-------|-----------------|-----------------|--------|---------------|-----------------------|--|
| B430-B-16 (5-7.5) | J1300078-008 | 01/04/2013 | 6010B | Potassium | mg/Kg | 110 | 5 | 20 | J | J B | Analyte detected at comparable concentrations in equipment blank B430-FB-02 and field blanks B430-FB-01 and -02. |
| B430-B-16 (5-7.5) | J1300078-008 | 01/04/2013 | 6010B | Sodium | mg/Kg | 28 | 2 | 6 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-16 (10-12.5) | J1300078-009 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.55 | 0.09 | 0.33 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-16 (10-12.5) | J1300078-009 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.28 | 0.008 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-16 (10-12.5) | J1300078-009 | 01/04/2013 | 6010B | Sodium | mg/Kg | 28 | 2 | 6 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-Hoist-2A (11-12.5) | J1300078-011 | 01/04/2013 | 6010B | Antimony | mg/Kg | 0.59 | 0.09 | 0.35 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-Hoist-2A (11-12.5) | J1300078-011 | 01/04/2013 | 6010B | Cadmium | mg/Kg | 0.29 | 0.009 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-Hoist-2A (11-12.5) | J1300078-011 | 01/04/2013 | 6010B | Cobalt | mg/Kg | 0.59 | 0.05 | 0.06 | J | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-Hoist-2A (11-12.5) | J1300078-011 | 01/04/2013 | 6010B | Sodium | mg/Kg | 29 | 2 | 28 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-4 (5-7.5) | J1300079-001 | 01/03/2013 | 6010B | Antimony | mg/Kg | 0.52 | 0.08 | 0.26 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-4 (5-7.5) | J1300079-001 | 01/03/2013 | 6010B | Cadmium | mg/Kg | 0.26 | 0.008 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-4 (5-7.5) | J1300079-001 | 01/03/2013 | 6010B | Cobalt | mg/Kg | 0.52 | 0.05 | 0.05 | J | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-B-4 (5-7.5) | J1300079-001 | 01/03/2013 | 6010B | Potassium | mg/Kg | 100 | 4 | 20 | J | J B | Analyte detected at comparable concentrations in equipment blank B430-EB-02 and field blanks B430-FB-01 and -02. |
| B430-B-4 (5-7.5) | J1300079-001 | 01/03/2013 | 6010B | Sodium | mg/Kg | 26 | 2 | 5 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-4 (10-12.5) | J1300079-002 | 01/03/2013 | 6010B | Antimony | mg/Kg | 0.60 | 0.09 | 0.42 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-4 (10-12.5) | J1300079-002 | 01/03/2013 | 6010B | Cadmium | mg/Kg | 0.30 | 0.009 | 0.06 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |

Table 2. Summary of Qualified Data

| Sample ID | Lab ID | Date Collected | Method | Analyte | Units | Reporting Limit | Detection Limit | Result | Lab Qualifier | Data Review Qualifier | Reason for Qualification |
|--------------------|--------------|----------------|--------|-----------|-------|-----------------|-----------------|--------|---------------|-----------------------|--|
| B430-B-4 (10-12.5) | J1300079-002 | 01/03/2013 | 6010B | Potassium | mg/Kg | 120 | 5 | 20 | J | J B | Analyte detected at comparable concentrations in equipment blank B430-EB-02 and field blanks B430-FB-01 and -02. |
| B430-B-5 (5-7.5) | J1300079-003 | 01/03/2013 | 6010B | Antimony | mg/Kg | 0.45 | 0.08 | 0.27 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-5 (5-7.5) | J1300079-003 | 01/03/2013 | 6010B | Cadmium | mg/Kg | 0.23 | 0.007 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-5 (5-7.5) | J1300079-003 | 01/03/2013 | 6010B | Cobalt | mg/Kg | 0.45 | 0.04 | 0.23 | J | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-B-5 (5-7.5) | J1300079-003 | 01/03/2013 | 6010B | Sodium | mg/Kg | 23 | 2 | 6 | J | J B | Analyte detected at comparable concentrations in field blank B430-FB-01 and equipment blanks B430-EB-01 and -02. |
| B430-B-5 (12.5-15) | J1300079-004 | 01/03/2013 | 6010B | Antimony | mg/Kg | 0.54 | 0.08 | 0.38 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-5 (12.5-15) | J1300079-004 | 01/03/2013 | 6010B | Cadmium | mg/Kg | 0.27 | 0.008 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-6 (5-7.5) | J1300079-005 | 01/03/2013 | 6010B | Antimony | mg/Kg | 0.52 | 0.08 | 0.31 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-6 (5-7.5) | J1300079-005 | 01/03/2013 | 6010B | Cadmium | mg/Kg | 0.26 | 0.008 | 0.05 | J | J B | Analyte detected in laboratory method blanks at comparable concentrations. |
| B430-B-6 (5-7.5) | J1300079-005 | 01/03/2013 | 6010B | Cobalt | mg/Kg | 0.52 | 0.05 | 0.16 | J | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |
| B430-B-6 (5-7.5) | J1300079-005 | 01/03/2013 | 6010B | Copper | mg/Kg | 0.52 | 0.07 | 0.47 | J | J B | Analyte detected in equipment blank B430-EB-02 and field blank B430-FB-02. |

RE: Renewed Underground Injection Control Permit #R-156 for Injection of Treated Groundwater at the U. S. Army Corps of Engineers, Fort Stewart, Building 430, Fort Stewart, Georgia (EPD-Facility ID # 9089118-1).

Dear Ms. Stevenson:

Enclosed is renewed Underground Injection Control (UIC) Permit #R-156 for the U. S. Army Corps of Engineers, Building 430 located in Fort Stewart, Georgia. This UIC permit allows the U.S. Army Corps of Engineers to utilize injection of treated groundwater through one (1) injection well to assist with the remediation of soil and ground water contaminated with petroleum hydrocarbons at this site for up to five (5) years. The UIC permit includes two (2) standard conditions and seven (7) additional conditions in the attachment.

If you have any questions about the permit, please contact Mr. Bijan Rahbar, UIC Coordinator, at (404) 656-3229.

Sincerely,

Judson H. Turner
Director

INJECTION WELL OPERATING PERMIT

PERMIT NUMBER: #R-156

DATE ISSUED: February 21, 2013

FACILITY DATA:

INJECTION WELL TYPE: CLASS V (type 5X26)

FACILITY: U.S. Army
Underground Storage Tanks 257-261
Building 430
Fort Stewart, Georgia
Liberty County

OPERATOR: U.S. Army Corps of Engineers
Directorate of Public Works
1550 Veterans Parkway
Fort Stewart, GA 31314-5048

LOCATION: Lat: 31° 52' 17" N
Long: 81° 36' 35" W

EPD-Facility ID # 9089118-1

In accordance with the provisions of the Georgia Rules for Underground Injection Control, Chapter 391-3-6-.13, as amended 2001, this permit is issued for the operation of the herein described injection system. This permit is effective immediately, unless appealed within thirty (30) days after its issuance and is conditioned upon the following:

- 1) The Permittee's continued compliance with the Georgia Rules for Underground Injection Control, Chapter 391-3-6-.13, the Georgia Rules for Water Quality Control (Revised) and the Georgia Rules for Safe Drinking Water (Revised); and
- 2) The Permittee's continued compliance with the Permittee's approved injection operation plan that is part of the approved Corrective Action Plan for this site, along with provisions of officially approved plan amendments, if any.

Additional conditions 1 through 7 are attached hereto.

This permit is issued in accordance with the application and supplemental information received on January 29, 2013. The injection operation plan is hereby approved and is based on the statements and supporting data entered herein or attached thereto, all of which are filed with the Environmental Protection Division of the Georgia Department of Natural Resources and hereby made a part of this permit.

This permit is subject to revocation for noncompliance with aforementioned conditions.
This permit expires on **February 20, 2018** unless previously terminated.

Judson H. Turner, Director, Environmental Protection Division
Georgia Department of Natural Resources

INJECTION WELL OPERATING PERMIT ADDITIONAL CONDITIONS

1. Permit Conditions.

- a. This permit is not transferable until any new operator shall agree in writing to all permit conditions. Any new operator also shall provide the Environmental Protection Division (Division) with appropriate documentation that they have adequate financial assurances to plug all existing Class V wells.
- b. If the U.S. Army Corps of Engineers (Operator) wishes to continue an activity regulated by this permit after the expiration of the permit, the Operator must apply for and obtain a new permit.
- c. The Operator shall report any instances of noncompliance with permit conditions to the Division in writing within five (5) working days of such noncompliance, and shall take all reasonable steps to minimize the impact on the environment resulting from noncompliance with this permit and the Georgia Rules for Underground Injection Control.
- d. The Operator shall notify the Division of any proposed changes to the performance of the treated groundwater injection system in writing at least thirty (30) days prior to the change.
- e. All reports submitted to the Division shall be signed and stamped by a Georgia Registered Professional Engineer or Professional Geologist.
- f. All analyses shall be performed by a laboratory approved or accredited by EPD in accordance with the Georgia Rules for Commercial Laboratory Accreditation, Chapter 391-3-26.

2. System Parameters.

- a. This permit is issued to the Operator for the purpose of operating a treated groundwater injection system at the above referenced site to aid in remediation of soil and ground water contaminated with petroleum hydrocarbons.
- b. Number of Class V injection wells: one (1).
- c. Injected fluid: treated groundwater.
- d. Maximum injection rate per well: 30 gallons/min. (gpm)/well.
Maximum total system injection rate: 30 gpm.
- e. Maximum injection volume per well: 43,200 gallons/day/well.
Maximum total system injection volume: 43,200 gallons/day.
- f. Maximum daily average injection pressure (at well head): 15 psi.

Additional Conditions, Renewed UIC Permit #R-156, February 21, 2013, Cont.

3. Monitoring and Reporting Requirements.

- a. The Operator shall report to the Underground Injection Control Program of the Division the number and exact location of all Class V injection wells it installs or plugs on a quarterly basis. The reports are to be submitted to the UIC Program in accordance with the reporting schedule stipulated by the Underground Storage Tank Management Program.
- b. The Operator shall submit to the Division for its approval, a detailed schematic diagram and location map on any Class V injection well that is different in construction from the specifications contained in the UIC permit application, no later than 45 days prior to installation of the injection well. The Operator cannot install such a well until it receives approval from the Division.
- c. The Operator shall submit to the UIC Program one (1) copy of any report regarding this site that the Operator is required to submit to the Underground Storage Tank Management Program, or any other program within the Division.
- d. The Operator shall submit to the UIC Program an annual report that will contain the following information.
 1. Status of the injection system operation;
 2. Results of any ground-water sampling and analyses;
 3. Results of any soil sampling and analyses;
 4. An evaluation of the plume movement through the ground water, if any;
 5. Comparisons of analyses to determine any changes in pollutant concentrations.

The annual reports will be provided to the UIC Program in accordance with the schedule stipulated by the Underground Storage Tank Management Program.

4. Emergency Situations.

- a. The Operator is to immediately notify the Division of any emergency situation that affects the injection system and describe the remedial activity that the Operator is utilizing to correct the situation.
 - b. The Operator is to immediately notify the Division when the emergency situation ceases to exist.
5. The Operator shall grant the Division permission to enter the facility property to conduct inspections of the injection system.

Additional Conditions, Renewed UIC Permit #R-156, February 21, 2013, Cont.

6. The Operator shall maintain a copy of this permit at the facility site.
7. The Operator shall, upon termination of the injection of treated groundwater through one Class V injection well at this site, properly plug and abandon all Class V wells constructed on this site in accordance with EPD's *Manual for Groundwater Monitoring* (September 1991) and notify the Division within thirty (30) days of such termination and abandonment.
