Digestion Logbook

Microwave 3051 Prep (Soil) (Version 1 - 6/1/2010)

Batch: 37422	Queue: MDIG	HBN: 475033	RULE: D3051/6020	ALSI SOP: 09-3051
File Name: 37422_120808-123026			METHOD: SW3051	Microwave ID: MARS

COMMENTS:	Comment Codes:	Reagents:		Pipettes:		Start	Finish
	1. Sample failed initial digestion due to a weight loss >5g	HNO3:	L02030 JT BAKER		Date:	08/08/2012	08/08/2012
	2. Sample reacts with reagent	HCl:	K25031 MALLINCKRODT		Time:	14:44:00	15:08:00
	3. Less sample used due to high metal conten	Boiling Stones:	D1069103		Tech:	KMK	KMK
	4. Less sample used to result in successful microwave digestion				Reviewed/Approved By:		N/A
	5. Sample does not digest by microwave, digest by method 3050				Date:

Total Solids Summary Forms

Sample Description
FTSW-AA-SO-30

Form 7
Duplicate Summary

Analysis Method: 2540G
SDG No.: ERT-006

Matrix (soil/water): soil
Units: %
Instrument ID: N/A
GC Column: N/A
Sample % Moisture: N/A

Lab Sample ID: 9981198009
Lab File ID: N/A
Lab Sample Dup. ID: 1019216
Dup. Lab File ID: N/A
Dup. % Moisture: N/A

Analyte	Sample Concentration	Duplicate Concentration	Relative Percent Difference (RPD)	(1)	Acceptable Limit
Total Solids	89.9	89.4	0.6		5%

(1) The following qualifiers are used:
* : Values outside of acceptable limits

ANALYTICAL REPORT

Workorder: 34-1222167
Client: ALS Laboratory Group
Project Manager: Kevin W. Griffiths

Analytical Results

Sample ID: FTSW-HR-So-43 9981198 001 | Sampling Site: Ft. Stewart | Collected: 08/01/2012
Lab ID: 1222167001 | Media: 8 oz Amber Glass Jar | Received: 08/07/2012
Matrix: Soil/Solid/Sediment | Sampling Parameter: NA

Analysis Method - Chemical Agent Breakdown

Preparation: Chemical Agent Breakdown, Soil Prep	Weight/Volume	Analysis: Chemical Agent Breakdown, Soil	Instrument ID: LCMS03
Batch: ELMS/1296 (HBN: 91939)	Initial: 1.42 grams	Batch: ELMS/1297 (HBN: 92002)	Percent Solid: 81.7
Prepared: 08/14/2012	Final: 10 mL	Analyzed: 08/18/2012 04:22	Report Basis: Dry

Analyte	ug/g	LOD (ug/g)	LOQ (ug/g)	Dilution	Qual.
Thiodiglycol	0.022	0.022	0.43	1	U

Analysis Method - SW 8270

Preparation: EPA 3550, Sonic Ext, SVOA Soil	Weight/Volume	Analysis: SW 8270D, Soil	Instrument ID: 5975-H
Batch: ENVX/15840 (HBN: 91685)	Initial: 30.81 grams	Batch: ESVO/3827 (HBN: 91984)	Percent Solid: 81.7
Prepared: 08/15/2012	Final: 1 mL	Analyzed: 08/16/2012 18:34	Report Basis: Dry

Analyte	ug/Kg	LOD (ug/Kg)	LOQ (ug/Kg)	Dilution	Qual.
1,4-Oxathiane	7.5	7.5	200	1	U
1,4-Dithiane	5.7	5.7	200	1	U

Sample ID: FTSW-HR-So-44 9981198 002 | Sampling Site: Ft. Stewart | Collected: 08/01/2012
Lab ID: 1222167002 | Media: 8 oz Amber Glass Jar | Received: 08/07/2012
Matrix: Soil/Solid/Sediment | Sampling Parameter: NA

Analysis Method - Chemical Agent Breakdown

Preparation: Chemical Agent Breakdown, Soil Prep	Weight/Volume	Analysis: Chemical Agent Breakdown, Soil	Instrument ID: LCMS03
Batch: ELMS/1296 (HBN: 91939)	Initial: 1.26 grams	Batch: ELMS/1297 (HBN: 92002)	Percent Solid: 88.1
Prepared: 08/14/2012	Final: 10 mL	Analyzed: 08/18/2012 08:48	Report Basis: Dry

Analyte	ug/g	LOD (ug/g)	LOQ (ug/g)	Dilution	Qual.
Thiodiglycol	0.023	0.023	0.45	1	U

Analysis Method - SW 8270

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

Thank you for shipping online with FedEx ShipManager at fedex.com.

Please Note

FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is $500, e.g., jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits; Consult the applicable FedEx Service Guide for details.
The estimated shipping charge may be different than the actual charges for your shipment. Differences may occur based on actual weight, dimensions, and other factors. Consult the applicable FedEx Service Guide or the FedEx Rate Sheets for details on how shipping charges are calculated.

Case Narrative

Method: ALS-LC/MS
Analysis: Agent Breakdown Products
ALS WO ID(s): 1221656

Client: ALS Laboratory Group
Account: 08001
Matrix: Water
HBN #: 91545

General Set Information: There was one field sample in this workorder. The sample was analyzed for thiodiglycol (TDG).

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1200 LC/MSD system in select ion monitoring (SIM) mode at m/z 97, 125, 139, 146, 181, 105 and 113. ChemStation software was used for instrument control and data analysis.

Sample Preparation: 9.9mL of each sample was transferred into a 15-mL centrifuge tube. 100µL of an internal standard solution was then added to each sample. The samples were capped, vortexed, and filtered with Phenomenex Phenex 0.45µm PES syringe filters.

Holding Times: All samples were analyzed within holding times.

Dilutions: No dilutions were necessary.

Method QC data: The method blank criteria were met. The method blank (LMB 289537) was less than 1/2 the RL of 50ug/L for all analytes. The recovery for LCS 289538 was within acceptable limits.

MS/MSD Analysis: A matrix spike and matrix spike duplicate were performed on parent sample 1221555006, which was in the same analytical batch. The recovery and RPD were within acceptable parameters.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with established procedures.

NC/CAR(s): None were required for this set.

Sample Calculation: Samples were reported in µg/L. Results were calculated in µg/L by the equation (A)x(B)x(C),

where: A = Analyte concentration from the standard curve (µg/mL)
B = Dilution performed at time of analysis
C = Conversion factor from µg/mL to µg/L (1000)

Miscellaneous Comments: None.

Case Narrative

Method: ALS-LC/MS
Analysis: Agent Breakdown Products
ALS WO ID(s): 1221656

Client: ALS Laboratory Group
Account: 08001
Matrix: Soil
HBN #: 91861

General Set Information: There were 14 field samples in this workorder. The samples were analyzed for thiodiglycol (TDG).

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1200 LC/MSD system in select ion monitoring (SIM) mode at m/z 97, 125, 139, 146, 181, 105 and 113. ChemStation software was used for instrument control and data analysis.

Sample Preparation: Approximately 1.00g of each sample was weighed into a 15-mL centrifuge tube, and 9.9mL of ASTM Type II water was added to each tube. 100µL of internal standard solution was then added to each sample, bringing the total extract volume to 10mL. The samples were capped, vortexed, rotated for at least 30 minutes, and filtered with Phenomenex Phenex 0.45µm PES syringe filters.

Holding Times: Holding times were met for all samples.

Dilutions: No dilutions were necessary.

Method QC data: The method blank criteria were met. The method blank (LMB 290472) was less than 1/2 the RL of 0.5ug/g for all analytes. The recoveries for LCS 290473 were within acceptable parameters.

MS/MSD Analysis: The matrix spike and matrix spike duplicate were performed on parent sample 1221656001. Recoveries and RPDs were within acceptable limits for all analytes.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with established procedures.

NC/CAR(s): None.

Sample Calculation: Samples were reported in µg/g. Results were calculated in µg/g by the equation (A)x(B)x(C)/(D),

where: A = Analyte concentration from the standard curve (µg/mL)
B = Dilution performed at time of analysis
C = Volume of extract (10mL)
D = Actual weight of sample aliquot (g)

Miscellaneous Comments: None.

Thomas T. McKay — August 16, 2012
Date

Case Narrative

Method: 8270D
Analysis: Semivolatiles by GC/MS
SOP ref: OE-SW-3550, OE-SW-3510, OS-SW-8270D

Set ID: 1221656
Client: ALS Laboratory Group
Matrix: Soil and Water

General Set Information: There are fifteen field samples plus MS/MSD in this reporting group.

Method Summary: This is a GC/MS method for determination of semivolatile organic compounds in soil and water according to the SW-846 Guidelines. Thirty grams of soil were extracted by sonication and then concentrated to final volume of 1.0 mL. One liter of water is extracted by separatory funnel and then concentrated to a final volume of 1.0 mL. The resulting extract is analyzed using an Agilent model 5975 GC/MS system with an electron impact ionization source and a quadrapole mass-filter detector.

Sample Preparation: All samples were prepared in accordance with method 3550 or 3510.

Holding Times: All preparation and analysis holding times were met for all samples.

Dilutions: None.

Method and Sample QC data: All target compounds were within recovery limits for the laboratory control sample. The method blank met the acceptance criteria with no target compounds detected above the reporting limit. All samples met pertinent internal standard area criteria. In some instances the latter-eluting internal standard areas were low due to a likely matrix effect, but the requested target analytes do not reference those internal standards. Most surrogate recoveries were within QC limits. Recovery of surrogate 2,4,6-tribromophenol was below the QC limit in sample 1221656007. In the water extraction batch, surrogate terphenyl-d14 had high recovery in some of the samples. This surrogate has a tendency to precipitate out of solution when stored under refrigeration, and it is prone to becoming concentrated in the solution. The old solution has since been discarded and replaced with a fresh one. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits. Of the six surrogates used in Method 8270, the two eluting closest to oxathiane and dithiane are 2-fluorophenol and phenol-d6, both of which were within limits in all samples.

MS/MSD Analysis: Matrix spiking was performed on Sample 1221656001 (FTSW-HR-SO-31). There was not enough sample to perform matrix spiking on the water batch. All recoveries were within expected ranges.

Instrument QC: The instrument was tuned with 50 ng DFTPP. A six-point initial calibration curve was analyzed prior to sample analysis. The concentrations of the standards were: 5, 20, 35, 50, 65 and 80 µg/mL. A calibration verification standard at a concentration of 50 ug/mL was analyzed to verify instrument response against the initial calibration. The initial calibration and continuing calibration verification passed all method criteria.

Miscellaneous Comments: None.

ANALYTICAL REPORT

Workorder: 34-1221656
Client: ALS Laboratory Group
Project Manager: Kevin W. Griffiths

Analytical Results

Sample ID: **FTSW-HR-SO-31** | Sampling Site: ERT | Collected: 08/01/2012
Lab ID: 1221656001 | Media: 8 oz Glass Jar Wide Mouth | Received: 08/03/2012
Matrix: Soil/Solid/Sediment | Sampling Parameter: NA

Analysis Method - Chemical Agent Breakdown

Preparation:	Chemical Agent Breakdown, Soil Prep	**Weight/Volume**	**Analysis:**	Chemical Agent Breakdown, Soil	**Instrument ID:** LCMS03
Batch:	ELMS/1293 (HBN: 91784)	**Initial:** 1.06 grams	**Batch:**	ELMS/1295 (HBN: 91861)	**Percent Solid:** 92.1
Prepared:	08/06/2012	**Final:** 10 mL	**Analyzed:**	08/15/2012 20:31	**Report Basis:** Dry

Analyte	ug/g	LOD (ug/g)	LOQ (ug/g)	Dilution	Qual.
Thiodiglycol	0.027	0.027	0.51	1	U

Analysis Method - SW 8270

Preparation:	EPA 3550, Sonic Ext, SVOA Soil	**Weight/Volume**	**Analysis:**	SW 8270D, Soil	**Instrument ID:** 5975-H
Batch:	ENVX/15752 (HBN: 91130)	**Initial:** 30.14 grams	**Batch:**	ESVO/3820 (HBN: 91737)	**Percent Solid:** 92.1
Prepared:	08/07/2012	**Final:** 1 mL	**Analyzed:**	08/09/2012 14:01	**Report Basis:** Dry

Analyte	ug/Kg	LOD (ug/Kg)	LOQ (ug/Kg)	Dilution	Qual.
1,4-Oxathiane	6.8	6.8	180	1	U
1,4-Dithiane	5.1	5.1	180	1	U

Sample ID: **FTSW-HR-SO-31 Dup** | Sampling Site: ERT | Collected: 08/01/2012
Lab ID: 1221656004 | Media: 8 oz Glass Jar Wide Mouth | Received: 08/03/2012
Matrix: Soil/Solid/Sediment | Sampling Parameter: NA

Analysis Method - Chemical Agent Breakdown

Preparation:	Chemical Agent Breakdown, Soil Prep	**Weight/Volume**	**Analysis:**	Chemical Agent Breakdown, Soil	**Instrument ID:** LCMS03
Batch:	ELMS/1293 (HBN: 91784)	**Initial:** 1.01 grams	**Batch:**	ELMS/1295 (HBN: 91861)	**Percent Solid:** 91.1
Prepared:	08/06/2012	**Final:** 10 mL	**Analyzed:**	08/15/2012 22:20	**Report Basis:** Dry

Analyte	ug/g	LOD (ug/g)	LOQ (ug/g)	Dilution	Qual.
Thiodiglycol	0.028	0.028	0.54	1	U

Analysis Method - SW 8270

Preparation:	EPA 3550, Sonic Ext, SVOA Soil	**Weight/Volume**	**Analysis:**	SW 8270D, Soil	**Instrument ID:** 5975-H
Batch:	ENVX/15752 (HBN: 91130)	**Initial:** 30.07 grams	**Batch:**	ESVO/3820 (HBN: 91737)	**Percent Solid:** 91.1
Prepared:	08/07/2012	**Final:** 1 mL	**Analyzed:**	08/09/2012 15:31	**Report Basis:** Dry

Analyte	ug/Kg	LOD (ug/Kg)	LOQ (ug/Kg)	Dilution	Qual.

Comments

Quality Control: SW 8270 - (HBN: 91473)

Surrogate terphenyl-d14 was above the QC limits in some samples. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits.

Quality Control: SW 8270 - (HBN: 91737)

Recovery of surrogate 2,4,6-tribromophenol was below the QC limit in sample 1221656007. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits.

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier Indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

Quality Control Sample
Batch Report

Analysis Information

Workorder: **1221656**

Limits:	Historical/Performance	**Preparation:**	EPA 3550, Sonic Ext, SVOA Soil	**Analysis:**	SW 8270
Basis:	ALS Laboratory Group	**Batch:**	ENVX/15752 (HBN: 91130)	**Batch:**	ESVO/3820 (HBN: 91737)
		Prepared By:	Dustin Calder	**Analyzed By:**	Reed A. Hendricks

Comments

Recovery of surrogate 2,4,6-tribromophenol was below the QC limit in sample 1221656007. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits.

QC Data Approved and Reviewed by

Reed A. Hendricks	Guy Barker	8/16/2012
Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◓ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected
QC results are not adjusted for moisture correction, where applicable

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $500, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

ALS WO ID #(S):1221656
ALS Sample #(S):1221656001-016
ALS Account #(s): 8001 Method: ALS LC/MS Matrix: Soil
Sequence: \\CHEM32\1\SEQUENCE\15AUG12-ABP-S.S
Prep Date: 08/06/2012 Analysis Date: 08/15/12 - 08/16/12
Prep/Analysis HBN #s: 91784/91861 Instrument LOD: 0.050µg/mL
Analyte: **Thiodiglycol (TDG)**
Reported MDL: See Report Reported LOD: See Report

SAMPLE PREPARATION: All ALS sample #'s agreed with field ID #'s. Approximately 1.00g of each sample was weighed into a 15-mL centrifuge tube, and 9.9mL of ASTM Type II water was added to each tube. 100µL of internal standard solution was then added to each sample, bringing the total extraction volume to 10.0mL. The samples were capped, vortexed, rotated for at least 30 minutes, and filtered with Pall 0.45µm Ion Chromatography Acrodiscs prior to analysis.

REAGENTS: Eluent A: 100% ASTM Type II water/0.1% glacial acetic acid.
Eluent B: 95% ACN/ 5% ASTM Type II water/0.1% glacial acetic acid.

HORIZON STANDARD(S): TDG (14169); MPA (14170); IMPA (14172); EMPA (14174); DIMP (14179)
All standards are at 1000µg/mL. Standards used to create calibration standards and those used for CCVs (target = 5.00µg/mL) and RLVS (target = 0.050µg/mL).
Internal Standard Solution: TDG-D8 (14177) at 100ug/mL.

CALIBRATION CURVE: Run 05/01/2012.
Raw data can be found in \\Alsltws013\DataReview\85766.

INSTRUMENT CONDITIONS: Samples were analyzed with an Agilent 1200 LC/MSD system, in positive SIM mode, monitoring m/z 97, 125, 139, 146, 181, 105 and 113.
Instrument ID: LCMS03 Run Time: 35.00 min. Flow Rate: 0.8mL/min Temp: 30°C
Output Gain: 3 Injection Volume: 10µL Fragmentor Voltage: 75 & 125
Column: Phenomenex Synergi Hydro-RP 4 micron (4.6 x 250mm) s/n: 245485-24

GRADIENT:

Time(min)	%Eluent A	%Eluent B
0.00	100.0	0.0
15.00	100.0	0.0
17.00	50.0	50.0
25.00	50.0	50.0
25.01	100.0	0.0

QC DATA: LMB/LCS **290472/73** were run with the batch. 1.00g of washed sand (EMD Lot# 36211706) was prepared in the same manner as the samples. 20µl of Horizon QC standard 13383 was added to 10.0mL of sample preparation for the LCS. Target = 20.0ug/g. ASTM Type II water was used for LMB extraction.

MS/MSD: MS/MSD was performed on sample 1221656001. 50µl of Horizon standard 14169 was added to 10.0mL of sample preparation. Spike target = 50.0µg/g.

COMMENTS: 1) Quantitation was done using m/z 105 for TDG. No confirmation ions were available for TDG. Results are reported in ug/g.
2) All CCV, LMB, LCS and MS/MSD results were within acceptable limits.

Certificate of Analysis

Product Brand	Fluka
PRODUCT-NO	88559
PRODUCT	2,2'-THIODIETHANOL *BioChemika*
FORMULA	$C_4H_{10}O_2S$
MOLECULAR MASS	122.19
CAS NUMBER	111-48-8
LOT	1410377

Test	Specification	Result
APPEARANCE (COLOR)	COLORLESS	COLORLESS
APPEARANCE (FORM)	CLEAR TO CLEAR VISCOUS LIQUID	CLEAR VISCOUS LIQUID
PURITY (GC AREA %)	≥ 99.0 % REL	99.9 % REL
GC (METHOD)	--	100% POLYETHYLENEGLYCOL (30 M X 0.32 MM X 0.25 UM), IN DICHLORMETHANE
REFRACTIVE INDEX N20/D	1.520 - 1.522	1.522
RESIDUE ON IGNITION	≤ 0.1 %	< 0.05 %
CARBON CONTENT	39.32 % (THEORY)	38.90 %
HYDROGEN CONTENT	8.25 % (THEORY)	8.49 %
INFRARED SPECTRUM	CONFORMS TO STRUCTURE	CONFORMS
QC RELEASE DATE	28/OCT/08

Quality Control
Buchs, Switzerland

Sigma-Aldrich guarantees the 'Sales-Specification' values only, additional lot specific tests may be included for further information. The current 'Sales-Specifications' sheet is available on request. For further inquiries, please contact our Technical Service.Sigma-Aldrich warrants, that its products conform to the information contained in this and other Sigma-Aldrich publications. Purchaser must determine the suitability of the product for its particular use. See reverse side of invoice for additional terms and conditions of sale. The values given on the 'Certificate of Analysis' are the results determined at the time of analysis.

Calibration Table

Agent Breakdown Products

Calib. Data Modified : 7/9/2012 11:13:05 AM

Calculate : Internal Standard
Based on : Peak Area

Rel. Reference Window : 10.000 %
Abs. Reference Window : 0.000 min
Rel. Non-ref. Window : 10.000 %
Abs. Non-ref. Window : 0.000 min
Use Multiplier & Dilution Factor with ISTDs
Uncalibrated Peaks : not reported
Partial Calibration : No recalibration if peaks missing

Curve Type : Quadratic (some peaks differ, see below)
Origin : Ignored (some peaks differ, see below)
Weight : Linear (Amnt) (some peaks differ, see below)

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :
Printout of recalibrations within a sequence:
Calibration Table after Recalibration
Normal Report after Recalibration
If the sequence is done with bracketing:
Results of first cycle (ending previous bracket)

Default Sample ISTD Information (if not set in sample table):

Analytical Documentation

ALS WO ID #(S):1221555; 1221656; 1222142
ALS Sample #(S):1221555006; 1221656017; 1222142012
ALS Account #(s): 8001 Method: ALS LC/MS Matrix: Water
Sequence: \\CHEM32\1\SEQUENCE\13AUG12-ABP.S
Prep Date: 08/13/2012 Analysis Date: 08/13/2012
HBN #: 91545 Instrument LOD: 0.050µg/mL
Analyte: **Thiodiglycol (TDG)**
Reported MDL: See Report Reported LOD: 50µg/L

SAMPLE PREPARATION: All ALS sample #'s agreed with field ID #'s. Samples were prepared by TTM. 9.9mL of each sample was transferred into a 15-mL centrifuge tube. 100µL of an internal standard solution was then added to each sample. The samples were capped, vortexed, and filtered with Phenex 0.45µm PES filters prior to analysis.

REAGENTS: Eluent A: 100% ASTM Type II water/0.1% glacial acetic acid.
Eluent B: 95% ACN/ 5% ASTM Type II water/0.1% glacial acetic acid.

HORIZON STANDARD(S): TDG (14169); MPA (14170); IMPA (14172); EMPA (14174); DIMP (14179)
All standards are at 1000µg/mL. Standards used to create calibration standards and those used for CCVs (target = 5.00µg/mL) and RLVS (target = 0.050µg/mL).
Internal Standard Solution: TDG-D8 (14177) at 100ug/mL.

CALIBRATION CURVE: Run 03/05/2012.
Raw data can be found in \\Alsltws013\DataReview\82050

INSTRUMENT CONDITIONS: Samples were analyzed with an Agilent 1200 LC/MSD system, in positive SIM mode, monitoring m/z 97, 125, 139, 146, 181, 105 and 113.
Instrument ID: LCMS03 Run Time: 35.00 min. Flow Rate: 0.8mL/min Temp: 30°C
Output Gain: 3 Injection Volume: 10µL Fragmentor Voltage: 75 & 125
Column: Phenomenex Synergi Hydro-RP 4 micron (4.6 x 250mm) s/n: 245485-24

GRADIENT:

Time(min)	%Eluent A	%Eluent B
0.00	100.0	0.0
15.00	100.0	0.0
17.00	50.0	50.0
25.00	50.0	50.0
25.01	100.0	0.0

QC DATA: 20µl of Horizon QC standard 13383 were used to spike LCS 289538; target = 2000µg/L. ASTM type II water was used for LMB 289537.

MS/MSD: MS/MSD was performed on sample 1221555006. 50µl of Horizon standard 14169 was added to 10.0mL of sample preparation. Spike target = 5000µg/L.

COMMENTS: 1) Quantitation was done using m/z 105 for TDG. No confirmation ions were available for TDG. Results are reported in ug/L.
2) All CCV, Blank, LCS and MS/MSD results were within acceptable limits.

Certificate of Analysis

Product Brand	Fluka
PRODUCT-NO	88559
PRODUCT	2,2'-THIODIETHANOL *BioChemika*
FORMULA	$C_4H_{10}O_2S$
MOLECULAR MASS	122.19
CAS NUMBER	111-48-8
LOT	1410377

Test	Specification	Result
APPEARANCE (COLOR)	COLORLESS	COLORLESS
APPEARANCE (FORM)	CLEAR TO CLEAR VISCOUS LIQUID	CLEAR VISCOUS LIQUID
PURITY (GC AREA %)	≥ 99.0 % REL	99.9 % REL
GC (METHOD)	--	100% POLYETHYLENEGLYCOL (30 M X 0.32 MM X 0.25 UM), IN DICHLORMETHANE
REFRACTIVE INDEX N20/D	1.520 - 1.522	1.522
RESIDUE ON IGNITION	≤ 0.1 %	< 0.05 %
CARBON CONTENT	39.32 % (THEORY)	38.90 %
HYDROGEN CONTENT	8.25 % (THEORY)	8.49 %
INFRARED SPECTRUM	CONFORMS TO STRUCTURE	CONFORMS
QC RELEASE DATE	28/OCT/08	

Edeltraud Schwärzler, Manager
Quality Control
Buchs, Switzerland

Sigma-Aldrich guarantees the 'Sales-Specification' values only, additional lot specific tests may be included for further information. The current 'Sales-Specifications' sheet is available on request. For further inquiries, please contact our Technical Service.Sigma-Aldrich warrants, that its products conform to the information contained in this and other Sigma-Aldrich publications. Purchaser must determine the suitability of the product for its particular use. See reverse side of invoice for additional terms and conditions of sale. The values given on the 'Certificate of Analysis' are the results determined at the time of analysis.

Calibration Table

Agent Breakdown Products

Calib. Data Modified : 7/9/2012 11:13:05 AM

Calculate : Internal Standard
Based on : Peak Area

Rel. Reference Window : 10.000 %
Abs. Reference Window : 0.000 min
Rel. Non-ref. Window : 10.000 %
Abs. Non-ref. Window : 0.000 min
Use Multiplier & Dilution Factor with ISTDs
Uncalibrated Peaks : not reported
Partial Calibration : No recalibration if peaks missing

Curve Type : Quadratic (some peaks differ, see below)
Origin : Ignored (some peaks differ, see below)
Weight : Linear (Amnt) (some peaks differ, see below)

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :
Printout of recalibrations within a sequence:
Calibration Table after Recalibration
Normal Report after Recalibration
If the sequence is done with bracketing:
Results of first cycle (ending previous bracket)

Default Sample ISTD Information (if not set in sample table):

Sample Management

This report contains the results of the analysis of one (1) water sample and fourteen (14) solid samples collected on August 1, 2012. Analytical results and quality control information are summarized in this data package.

Qualifier Symbol Definitions:

U = Qualifier indicates that the analyte was not detected above the LOD.
J = Qualifier indicates that the analyte value is between the DL and the LOQ.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds the calibration range.
P = Qualifier indicates that the RPD between the two analytical columns is greater than 40%.
NSC = Qualifier indicates that spike recoveries were not calculated based on the spiking concentration.

Result Symbol Definitions:

DL = The smallest analyte concentration that can be demonstrated to be different from zero or a blank concentration at the 99% level of confidence.
LOD = The smallest analyte concentration that must be present in a sample in order to be detected at a high level of confidence.
LOQ = The lowest concentration that produces a quantitative result within specified limits of precision or bias.

Sample Receipt

Samples arrived at ALS via courier on August 2, 2012. Upon receipt, the samples were inspected and compared to the Chain of Custody. Sample temperature was documented on the enclosed Chain of Custody. Samples were received intact and properly preserved, unless noted on the enclosed Certificate of Analysis and/or Chain of Custody.

Subcontracting

Fifteen (15) samples were subcontracted for Method 8270/8321 analysis. Results are provided at the end of this report.

Totals Metals by SW-846 Method 6020A

Sample handling. One (1) water sample was analyzed for total metals on the Agilent 7700x using SW-846 Method 6020A. The sample was analyzed within the six-month holding time established for this method.

Calibration. All criteria associated with the calibration were within method control limits.

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within method control limits.

Matrix Spike/Matrix Spike Duplicate. A matrix spike and matrix spike were performed on sample FTSW-HR-SO-37 (09.5) ER (9980875015) in this data deliverable. The MS and MSD recoveries and their RPDs were within method control limits.

Totals Metals by SW-846 Method 6020A

Sample handling. Fourteen (14) solid samples were digested and analyzed for total metals on the Agilent 7700x using SW-846 Method 6020A. The samples were analyzed within the six-month holding time established for this method.

Calibration. All criteria associated with the calibration were within method control limits.

Blanks. Metals were not detected in the blanks.

Laboratory Control Samples. Recoveries were within method control limits.

Matrix Spike/Matrix Spike Duplicate. A matrix spike and matrix spike duplicate were performed on sample FTSW-HR-SO-31 (9980875001) in this data deliverable. The MS and MSD recoveries and their RPDs were within method control limits.

Total Solids by SM 2540G

Sample handling. Fourteen (14) solid samples were analyzed for total solids by Standard Method 2540G for dry weight reporting purposes. The samples were analyzed within the 14-day method recommended hold time for dry weight reporting.

Duplicate. A duplicate analysis, identified as 1018298, was performed on sample 9980875011(FTSW-HR-SO-39). The relative percent difference between the results was within the QC limit of 5%.

Thank you for shipping online with FedEx ShipManager at fedex.com.

Please Note
FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is $500, e.g., jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits. Consult the applicable FedEx Service Guide for details.
The estimated shipping charge may be different than the actual charges for your shipment. Differences may occur based on actual weight, dimensions, and other factors. Consult the applicable FedEx Service Guide or the FedEx Rate Sheets for details on how shipping charges are calculated.

Certificate of Analysis

Project Name:	**Ft. Stewart GA project**	Workorder:	**9980875**
Purchase Order:		Workorder ID:	**ERT005|Ft. Stewart 3153-004**

Dear Mr. Gearhart,

Enclosed are the analytical results for samples received by the laboratory on Thursday, August 02, 2012.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Vicki Forney (Project Coordinator) or Anna G Milliken (Technical Manager) at (717) 944-5541.

Please visit us at www.analyticallab.com for a listing of ALS' NELAP accreditations and Scope of Work, as well as other links to Water Quality documentation on the internet.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Anna G Milliken
Technical Manager

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are performed in the laboratory and are therefore analyzed out of hold time.

Standard Acronyms/Flags

J, B	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference

Total Metals in Water by 6020A Summary Forms

6020 3015
- COVER PAGE -
INORGANIC ANALYSIS DATA PACKAGE

Client: ERT Earth Resources Technology, Inc

SDG No.: ERT-005 **Method Type:** 6020 3015 **SOW No.:**

Contract: ERT005|Ft. Stewart 3 **Lab Code:** CAS **Case No.:** **SAS No.:**

Lab Sample ID	Client Sample ID	QC Description
9980875015	FTSW-HR-SO-37 (09.5) ER	
9980875015S	FTSW-HR-SO-37 (09.5) ER	Matrix Spike
9980875015SD	FTSW-HR-SO-37 (09.5) ER	Matrix Spike Duplicate

Were ICP interelement corrections applied?	Yes/No	Yes	
Were ICP background corrections applied?	Yes/No	Yes	
If yes - were raw data generated before applications of background corrections?	Yes/No	No	

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: **Lisa Miller**

Digestion Logbook

Microwave 3015 Prep (Water) (Version 1- 6/1/2010)

Note: All TCLP matrix spikes are spiked prior to preservation as noted in the TCLP logbook.

Batch: 37400	Queue: MDIG	HBN: 474817	RULE: D3015/6020	ALSI SOP: 09-3015
File Name: 37400_120807-083405			METHOD: 3015	Microwave ID: MARS

Batch Type:	Comment Codes:	Reagents:		Pipettes:		Start	Finish
T: TCLP	1. Sample failed initial digestion due to a weight loss >5g	HNO3:	L12065 JT BAKER		Date:	08/07/2012	08/07/2012
S: SPLP	2. Sample reacts with reagent				Time:	08:38:00	09:05:00
M: 6020	3. Less sample used due to high metal content				Tech:	KMK	KMK
W: 6010	4. Less sample used to result in successful microwave digestion				Reviewed/Approved By:		N/A
A: ASTM	5. Sample does not digest by microwave, digest by method 3050				Date:

Microwave 3051 Prep (Soil) (Version 1 - 6/1/2010)

Batch: 37422	Queue: MDIG	HBN: 475033	RULE: D3051/6020	ALSI SOP: 09-3051
File Name: 37422_120808-123026			METHOD: SW3051	Microwave ID: MARS

COMMENTS:	Comment Codes:	Reagents:		Pipettes:		Start	Finish
	1. Sample failed initial digestion due to a weight loss >5g	HNO3:	L02030 JT BAKER		Date:	08/08/2012	08/08/2012
	2. Sample reacts with reagent	HCl:	K25031 MALLINCKRODT		Time:	14:44:00	15:08:00
	3. Less sample used due to high metal conten	Boiling Stones:	D1069103		Tech:	KMK	KMK
	4. Less sample used to result in successful microwave digestion				Reviewed/Approved By:		N/A
	5. Sample does not digest by microwave, digest by method 3050				Date:

Comments

Quality Control: SW 8270 - (HBN: 91473)

Surrogate terphenyl-d14 was above the QC limits in some samples. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits.

Quality Control: SW 8270 - (HBN: 91737)

Recovery of surrogate 2,4,6-tribromophenol was below the QC limit in sample 1221656007. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits.

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit.
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

Report ID: 9980875 - 8/31/2012

Case Narrative

Method: ALS-LC/MS
Analysis: Agent Breakdown Products
ALS WO ID(s): 1221564

Client: ALS Laboratory Group
Account: 08001
Matrix: Soil
HBN #: 91854

General Set Information: There were 22 field samples in this workorder. The samples were analyzed for thiodiglycol (TDG).

Method Summary: Each sample was prepared as noted below and analyzed using an Agilent 1200 LC/MSD system in select ion monitoring (SIM) mode at m/z 97, 125, 139, 146, 181, 105 and 113. ChemStation software was used for instrument control and data analysis.

Sample Preparation: Approximately 1.00g of each sample was weighed into a 15-mL centrifuge tube, and 9.9mL of ASTM Type II water was added to each tube. 100µL of internal standard solution was then added to each sample, bringing the total extract volume to 10mL. The samples were capped, vortexed, rotated for at least 30 minutes, and filtered with Phenomenex Phenex 0.45µm PES syringe filters.

Holding Times: Holding times were met for all samples.

Dilutions: No dilutions were necessary.

Method QC data: The method blank criteria were met. The method blanks (LMB 290090 & 290095) were less than 1/2 the RL of 0.5ug/g for all analytes. The recoveries for LCS 290091 & 290096 were within acceptable parameters.

MS/MSD Analysis: The matrix spikes and matrix spike duplicates were performed on parent samples 1221564001 & 1221564013. Recoveries and RPDs were within acceptable limits for all analytes.

Instrument QC: Instrument initial and continuing calibrations were performed in accordance with established procedures.

NC/CAR(s): NC/CAR #s 497 & 498 were issued for this workorder. (See Misc. Comments.)

Sample Calculation: Samples were reported in µg/g. Results were calculated in µg/g by the equation (A)x(B)x(C)/(D),

where: A = Analyte concentration from the standard curve (µg/mL)
B = Dilution performed at time of analysis
C = Volume of extract (10mL)
D = Actual weight of sample aliquot (g)

Miscellaneous Comments: Sample 1221564023 was extracted without the addition of the internal standard. NC/CAR #498 was issued to address this. Additionally, the final CCV of the analytical batch was not reportable due to a software error. NC/CAR #497 was issued to address this.

Thomas T. McKay — August 16, 2012
Date

Case Narrative

Method: 8270D
Analysis: Semivolatiles by GC/MS
SOP ref: OE-SW-3550, OE-SW-3510, OS-SW-8270D

Set ID: 1221564
Client: ALS Laboratory Group
Matrix: Soil and Water

General Set Information: There are twenty-two field samples plus MS/MSD in this reporting group.

Method Summary: This is a GC/MS method for determination of semivolatile organic compounds in soil and water according to the SW-846 Guidelines. Thirty grams of soil were extracted by sonication and then concentrated to final volume of 1.0 mL. One liter of water is extracted by separatory funnel and then concentrated to a final volume of 1.0 mL. The resulting extract is analyzed using an Agilent model 5975 GC/MS system with an electron impact ionization source and a quadrapole mass-filter detector.

Sample Preparation: All samples were prepared in accordance with method 3550 or 3510.

Holding Times: All preparation and analysis holding times were met for all samples.

Dilutions: None.

Method and Sample QC data: All target compounds were within recovery limits for the laboratory control sample. The method blank met the acceptance criteria with no target compounds detected above the reporting limit. All samples met pertinent internal standard area criteria. In some instances the latter-eluting internal standard areas were low due to a likely matrix effect, but the requested target analytes do not reference those internal standards. Most surrogate recoveries were within QC limits. Recovery of surrogate 2,4,6-tribromophenol was below the QC limit in sample 1221564011. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits. Of the six surrogates used in Method 8270, the two eluting closest to oxathiane and dithiane are 2-fluorophenol and phenol-d6, both of which were within limits in all samples.

MS/MSD Analysis: Matrix spiking was performed on Sample 1221564013 (FTSW-HR-SO-22(04). Percent recovery and reproducibility outliers in the MS/MSD are attributed to matrix effect. Acceptable recovery of all analytes in the laboratory control sample validate that the method is in control for this batch.

Instrument QC: The instrument was tuned with 50 ng DFTPP. A six-point initial calibration curve was analyzed prior to sample analysis. The concentrations of the standards were: 5, 20, 35, 50, 65 and 80 µg/mL. A calibration verification standard at a concentration of 50 ug/mL was analyzed to verify instrument response against the initial calibration. The initial calibration and continuing calibration verification passed all method criteria.

Miscellaneous Comments: None.

Comments

Quality Control: SW 8270 - (HBN: 91657)

Outliers in the MS/MSD are attributed to matrix effect. Since recoveries are within limits in the LCS, the method is deemed to be in control for this batch.

Recovery of surrogate 2,4,6-tribromophenol was below QC limits in Sample 1221564011. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits.

Report Authorization

Method	Analyst	Peer Review
Chemical Agent Breakdown	Thomas T. McKay	Thomas J. Masoian
SW 8270	Reed A. Hendricks	Matt Garvin
Solids/Moisture Determination	Ilse J. Ovalle	Ashley Waganheim

General Lab Comments

The results provided in this report relate only to the items tested.
Samples were received in acceptable condition unless otherwise noted.
Samples have not been blank corrected unless otherwise noted.
This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

Result Symbol Definitions

MDL = Method Detection Limit, a statistical estimate of method/media/instrument sensitivity.
RL = Reporting Limit, a verified value of method/media/instrument sensitivity.
CRDL = Contract Required Detection Limit
Reg. Limit = Regulatory Limit.
ND = Not Detected, testing result not detected above the MDL or RL.
< This testing result is less than the numerical value.
** No result could be reported, see sample comments for details.

Qualifier Symbol Definitions

U = Qualifier indicates that the analyte was not detected above the MDL.
J = Qualifier Indicates that the analyte value is between the MDL and the RL. It is also used to indicate an estimated value for tentatively identified compounds in mass spectrometry where a 1:1 response is assumed.
B = Qualifier indicates that the analyte was detected in the blank.
E = Qualifier indicates that the analyte result exceeds calibration range.
P = Qualifier indicates that the RPD between the two columns is greater than 40%.

Comments

Outliers in the MS/MSD are attributed to matrix effect. Since recoveries are within limits in the LCS, the method is deemed to be in control for this batch.

Recovery of surrogate 2,4,6-tribromophenol was below QC limits in Sample 1221564011. With the large number of analytes reported by Method 8270, it is to be expected that occasional outliers will occur. Based on the rule of marginal exceedences, the ALS SOP makes allowances for the data to be considered acceptable with one base/neutral surrogate and one acid surrogate outside control limits.

QC Data Approved and Reviewed by

Reed A. Hendricks	Matt Garvin	8/14/2012
Analyst	**Peer Review**	**Date**

Symbols and Definitions

* - Analyte above reporting limit or outside of control limits
▲ - Sample result is greater than 4 times the spike added
◓ - Sample and Matrix Duplicate less than 5 times the reporting limit

RPD - Relative % Difference (Spike / Spike Duplicate)
ND - Not Detected
QC results are not adjusted for moisture correction, where applicable

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $500, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

ALS WO ID #(S):1221564
ALS Sample #(S):1221564001-024
ALS Account #(s): 8001 Method: ALS LC/MS Matrix: Soil
Sequence: \\CHEM32\1\SEQUENCE\14AUG12-ABP.S
Prep Date: 08/13/2012 Analysis Date: 08/14/12 - 08/15/12
Prep/Analysis HBN #s: 91709/91854 Instrument LOD: 0.050µg/mL
Analyte: **Thiodiglycol (TDG)**
Reported MDL: See Report Reported LOD: See Report

SAMPLE PREPARATION: All ALS sample #'s agreed with field ID #'s. Approximately 1.00g of each sample was weighed into a 15-mL centrifuge tube, and 9.9mL of ASTM Type II water was added to each tube. 100µL of internal standard solution was then added to each sample, bringing the total extraction volume to 10.0mL. The samples were capped, vortexed, rotated for at least 30 minutes, and filtered with Pall 0.45µm Ion Chromatography Acrodiscs prior to analysis.

REAGENTS: Eluent A: 100% ASTM Type II water/0.1% glacial acetic acid.
Eluent B: 95% ACN/ 5% ASTM Type II water/0.1% glacial acetic acid.

HORIZON STANDARD(S): TDG (14169); MPA (14170); IMPA (14172); EMPA (14174); DIMP (14179)
All standards are at 1000µg/mL. Standards used to create calibration standards and those used for CCVs (target = 5.00µg/mL) and RLVS (target = 0.050µg/mL).
Internal Standard Solution: TDG-D8 (14177) at 100ug/mL.

CALIBRATION CURVE: Run 05/01/2012.
Raw data can be found in \\Alsltws013\DataReview\85766.

INSTRUMENT CONDITIONS: Samples were analyzed with an Agilent 1200 LC/MSD system, in positive SIM mode, monitoring m/z 97, 125, 139, 146, 181, 105 and 113.
Instrument ID: LCMS03 Run Time: 35.00 min. Flow Rate: 0.8mL/min Temp: 30°C
Output Gain: 3 Injection Volume: 10µL Fragmentor Voltage: 75 & 125
Column: Phenomenex Synergi Hydro-RP 4 micron (4.6 x 250mm) s/n: 245485-24

GRADIENT:

Time(min)	%Eluent A	%Eluent B
0.00	100.0	0.0
15.00	100.0	0.0
17.00	50.0	50.0
25.00	50.0	50.0
25.01	100.0	0.0

QC DATA: LMB/LCS **290090/91** & **290095/96** were run with the batch. 1.00g of washed sand (EMD Lot# 36211706) was prepared in the same manner as the samples. 20µl of Horizon QC standard 13383 was added to 10.0mL of sample preparation for the LCS samples. Target = 20.0ug/g. ASTM Type II water was used for LMB extractions.

MS/MSD: MS/MSDs were performed on samples 1221564001 & 122564013. 50µl of Horizon standard 14169 was added to 10.0mL of each sample preparation. Spike target = 50.0µg/g.

COMMENTS: 1) Quantitation was done using m/z 105 for TDG. No confirmation ions were available for TDG. Results are reported in ug/g.
2) All CCV, LMB, LCS and MS/MSD results were within acceptable limits.

Calibration Table

Agent Breakdown Products

Calib. Data Modified : 7/9/2012 11:13:05 AM

Calculate : Internal Standard
Based on : Peak Area

Rel. Reference Window : 10.000 %
Abs. Reference Window : 0.000 min
Rel. Non-ref. Window : 10.000 %
Abs. Non-ref. Window : 0.000 min
Use Multiplier & Dilution Factor with ISTDs
Uncalibrated Peaks : not reported
Partial Calibration : No recalibration if peaks missing

Curve Type : Quadratic (some peaks differ, see below)
Origin : Ignored (some peaks differ, see below)
Weight : Linear (Amnt) (some peaks differ, see below)

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :
Printout of recalibrations within a sequence:
Calibration Table after Recalibration
Normal Report after Recalibration
If the sequence is done with bracketing:
Results of first cycle (ending previous bracket)

Default Sample ISTD Information (if not set in sample table):

Fort Stewart RFI Report
Appendix E-3: Data Quality Assessment

1.0 INTRODUCTION

The analytical data provided by ALS Laboratory Group (ALS) of Middletown, Pennsylvania and the sample procedures followed by ERT, Inc. (ERT) have been reviewed by the ERT Project Chemist and validated by the Meridian Consultant Group, Inc. (MCGI) Senior Chemist. This data quality assessment (DQA) section is prepared to summarize those findings in accordance with the approved Quality Assurance Project Plan (QAPP) (ERT, 2012), and specifically evaluates the data quality indicators (DQIs) of precision, accuracy, reproducibility, comparability, completeness, and sensitivity (PARCCS) with respect to the project data quality objectives (DQOs). Overall, the data were considered to be of an acceptable quality to be used to perform further evaluations.

1.1 Analytical Program

Environmental and field quality control (QC) samples were analyzed by ALS. The laboratory analyzed all environmental samples and field QC samples (i.e. trip blanks, equipment rinsate blanks [ERBs], field duplicates, matrix spikes [MS], and matrix spike duplicates [MSD]) using accepted laboratory standard operating procedures (SOPs) based on the *SW-846 Test Methods for Evaluating Solid Waste, Physical/Chemical Methods*; specifically United States Environmental Protection Agency (USEPA) Methods 6020A, 8330B, 8270D, and 8321 (USEPA, 2007).

The analytical data packages included the following list of ALS sample delivery groups (SDGs), plus subcontracted SDGs to other laboratories within the ALS network (i.e. ALS – Salt Lake City, Utah):

- 9980109
- 9980394
- 9980395
- 9980614
- 9980875
- 9981198
- 9981496
- 9981774

All samples were collected, shipped, handled, and analyzed in compliance with the approved QAPP (ERT, 2012).

1.2 Field and Quality Control Sample Summary

The project utilized both field and analytical laboratory QC measures to meet the DQOs. The sampling program during the RFI field activities consisted of 92 regular soils samples, one surface water sample, and two sediment samples. ALS was also provided with all corresponding field QC samples, which included: 5 ERBs, 9 field duplicates, and 5 MS/MSD pairs.

1.3 Data Deliverables

Complete analytical data packages, including raw data and appropriate electronic data deliverables (EDDs), were submitted by ALS to ERT. The data packages were provided in an error-free electronic format.

ALS prepared USEPA Contract Laboratory Program (CLP) Level IV data packages to include a cover sheet, table of contents, case narrative, the analytical results, sample receipt and data

management records, internal laboratory QA/QC information, and raw data. The laboratory data packages were organized so that the analytical results were reported on a per batch basis. Full data packages and EDDs are available in Appendix E-2.

1.4 Data Quality Objectives

The DQOs for this task included:

- Characterizing media in each MRS that could have been impacted from historical Department of Defense (DoD) activities.
- Identifying chemicals of potential concern (COPCs) and chemicals of potential ecological concern (COPECs).
- Determining if there is a potential current risk to human and ecological health from contaminants exceeding specified screening levels.
- Determining if corrective measures are warranted at each MRS.

The project DQOs were identified in the approved QAPP (ERT, 2012), and were developed based on the investigation needs. Quality assurance objectives were also developed to support the project DQOs and to ensure the collected data would be defensible and support the conclusions of the investigation.

Performance and acceptance criteria were developed in order to minimize the potential for study error rates. Quantitative project specific objectives for the DQIs of precision, accuracy, completeness, and sensitivity were developed in order to define acceptable measurement error and to assess the overall quality of the analytical data collected. Quantitative objectives for precision and accuracy were established to be in accordance with the specific analytical methodologies and laboratory control limits, which are also identified in the approved QAPP (ERT, 2012). Precision between field duplicate samples was set at a relative percent difference (RPD) of 30 percent. The objective of the percentage of data to be within established accuracy and precision limits was 90 percent. Completeness, which was defined in the approved QAPP as the difference between planned data and the actual amount of data collected, was established at 95 percent.

1.5 Data Evaluation

Numerical DQOs for accuracy, precision, and completeness were calculated for the RFI data. These DQOs provide the main point of reference for an assessment of environmental data as a whole. A detailed assessment of the data quality results, including quantitative and qualitative evaluations, is presented in the following sections.

1.5.1 Precision

Precision is defined as the reproducibility, or degree of agreement, among replicate measurements of the same compound analyzed under identical conditions. For samples collected and analyzed as field duplicates, precision was expressed as the RPD of the concentration of elements detected in the sample and associated duplicate. As with MS/MSDs, the field duplicate data served as indications of the matrix sampled and precision in the analytical system. An MS/MSD analysis was required for every 20 samples in a laboratory batch. Field duplicates were required at a 10 percent frequency. Data validation indicated that the number and magnitude of field duplicate and spike failures were within acceptable validation guidelines such

that all data were usable. A detailed assessment of the data quality results for precision is presented below.

1.5.1.1 Field Duplicates

Duplicate environmental field samples were collected at selected locations at a frequency of 1 per 10 regular samples collected (10 percent frequency), in order to evaluate the precision of the sampling techniques. The RPD value of each detected compound or element was reviewed to assess the sample collection reproducibility and matrix variability. When good field techniques are consistently implemented and matrix effects are minimal, the RPDs are expected to be low. For all soil parameters, 94 percent of the RPDs were within the established precision limit for field duplicate analyses; 4 of 62 individual parameter results were greater than 30% RPD. No qualifying action was taken based on field duplicate results. Field duplicate analyses greater than 30% RPD were limited to select metals, and are presented in Table E-3-1.

1.5.1.2 Matrix Spike Duplicates

MSD samples were collected at the correct frequency (1 per 20 regular samples collected, or 5 percent), and the precision control limits used to evaluate the data were taken from the approved QAPP (ERT, 2012). MSD evaluation was performed on MS/MSD samples collected in the field with the batch of regular environmental samples. 100 percent of the RPDs for the MS/MSD samples evaluated were within the established control limits.

1.5.2 Accuracy

Accuracy is defined as the extent of agreement between a measured or calculated value and the true value. Accuracy was determined using spike percent recovery (%R) data from MS and MSD samples that were collected in the field with the batch of regular environmental samples to identify matrix effects. ERBs were collected to also serve to identify contamination effects. MS and MSD analyses were required for every 20 samples per matrix. ERBs were required for every 20 samples collected using non-disposable sampling equipment. Data validation indicated that the number and magnitude of blank and spike failures were within acceptable validation guidelines such that all data were usable. A detailed assessment of the data quality results for accuracy is presented below.

1.5.2.1 Equipment Rinsate Blanks

ERBs were collected to evaluate the decontamination technique used for non-disposable sampling equipment. ERBs were collected by pouring distilled water through a recently decontaminated piece of equipment into a prepared sample container appropriate for the required analysis.

ERBs were analyzed at the correct frequency (1 per 20 regular samples collected, or 5 percent, when non-disposable sampling equipment was employed). Arsenic was detected at low levels in two ERB samples collected; and 2,4,6-trinitrotoluene (TNT) was detected in one ERB sample collected during soil sampling, as presented in Table E-3-2. Arsenic and TNT were not detected in the respective, associated regular samples; no qualifying action was taken.

1.5.2.2 Matrix Spikes

MS samples were collected at the correct frequency (1 per 20 regular samples collected per matrix, or 5 percent), and the accuracy control limits used to evaluate the data were taken from the approved QAPP (ERT, 2012). MS evaluation was performed on MS and MSD samples collected in the field with the batch of regular environmental samples. Greater than 96 percent

of the %R for the MS and MSD samples evaluated were within the established control limits; 4 of 102 of individual, relevant parameter MS and MSD %R results were outside of control limits. %R results for the MS and MSD samples in SDG 9980394 displayed high recoveries for aluminum and lead, as presented in Table E-3-3. Positive results for these two elements in the regular soil samples in this SDG were qualified "J" to indicate that the reported results are an estimate.

1.5.3 Representativeness

Representativeness was evaluated by comparing preservation and analytical procedures to those described in the approved QAPP (ERT, 2012), by evaluating holding times, and by examining blanks for possible contamination of samples during collection and analysis.

All samples were preserved, prepared, and analyzed following methods specified in the approved QAPP (ERT, 2012). ERBs were found to be free of target analytes, except for those discussed in Section 1.5.2 above and presented in Table E-3-2.

Holding times are defined as the maximum amount of time allowed to lapse between the date and time of sample collection and the date and time of sample analysis. All samples were analyzed within the recommended method holding times, except for the aqueous sample, FTSW-HR-SO-02(01.5) ERB, which was extracted for 1,4-dithiane and 1,4-oxathiane two days outside the technical holding time. All other QC samples and all regular samples were analyzed within standard holding time of 6 months for metals, 40 days for explosives, and 40 days for 1,4-dithiane and 1,4-oxathiane, and 14 days for thiodiglycol.

Representativeness, in part, was also accomplished by the consistent use of approved sampling techniques, environmental sample collection methods, equipment, decontamination methods, and sample containers for the field work according to the guidelines and specifications described in the approved QAPP (ERT, 2012), which included ERT standard operating procedures. The approved QAPP also identified that an audit plan would be developed. However, instead of developing an official audit plan that may have included a field audit, the Quality Control Manager reviewed all of the daily reports and received numerous daily updates on the field effort to ensure the work was conducted as planned. Adherence to the procedures outlined in the approved QAPP is well documented within the field notes (included in Appendix M) and all field work was overseen by onsite USACE personnel who ensured compliance with the Work Plan on a daily basis.

As noted in Section 4.2.1 of the RFI, due to soil conditions a knife and/or pick was used at some of the Anti-Aircraft Range sampling locations to assist with accessing the sampling locations. As neither of these came into contact with soil that was collected, there was no cross-contamination. Additionally, Section 4.2.2 of the RFI details the use of the excavator to access some of the subsurface sample locations due to the high clay content of some of the sampling locations. When this occurred, the excavator was used to excavate subsurface material after collection of the surface sample and the GPS unit was utilized to reacquire the subsurface sampling location so that the surface and subsurface samples were still co-located. No soil cross-contamination was introduced by utilizing the excavator as a 1 foot soil buffer was utilized between the depth excavated with the excavator and the top of the subsurface sample.

The data are considered representative of site conditions for the purpose of the RFI; the sampling team followed approved standard operating procedures for sample collection and handling, and the laboratory followed approved standard operating procedures for sample handling, preparation, and analysis.

1.5.4 Completeness

Completeness determinations were made separately for samples obtained from the field collection effort and data obtained from the analytical measurement system. As identified above, [field] completeness is the difference between planned data and the actual amount of data collected. Completeness also refers to the fraction of valid data obtained (i.e. not rejected) compared to that which was planned. Analytical completeness is calculated as follows:

$$\text{Completeness (\%)} = \frac{\text{Number of Valid Measurements Made}}{\text{Number of Measurements Planned}}$$

Field completeness was 100 percent; all proposed regular and QC samples were collected. Analytical completeness was 100 percent (no data were rejected), indicating that the DQOs for completeness were met.

1.5.5 Comparability

Comparability refers to the confidence with which one data set can be compared to another. To improve data comparability, the data set used for this RFI was generated by employing standardized analytical methods and standardized data validation procedures. Project planning, including lab selection, incorporated various appropriate USEPA guidance documents, as well as direct input from USACE on field and laboratory issues to ensure the comparability of the data. Because of the implementation of standard planning, field, analytical, and validation procedures during this investigation; the data can be compared with confidence to others of acceptable data quality.

1.5.6 Sensitivity

Sensitivity was evaluated as a function of the laboratory limit of detection (LOD) with respect to chemical specific screening level (SL) benchmarks. Typically, LODs should be less than the screening levels, but this does not always occur (i.e. because of dilutions or extremely sensitive screening criteria). The analytical methods and the resultant LODs used in this investigation resulted in most LODs for explosives to be greater than current USEPA Risk-based Protection of Groundwater Soil SLs (USEPA, 2012). No explosives were detected in any sample collected, which increases the certainty that explosives were not present in concentrations at or below the SLs. Sample LODs greater than the project SLs are identified in Table E-3-4.

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Inorganic Data Validation.

Acronyms:

AA	Atomic Absorption
CARD	CLP Analytical Results Database
CCB	Continuing Calibration Blank
CCS	Contract Compliance Screening
CCV	Continuing Calibration Verification
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRDL	Contract Required Detection Limit
CSF	Complete SDG File
CV	Cold Vapor
%D	Percent Difference
DAS	Delivery of Analytical Services
DSF	Data Summary Form
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
ICAL	Initial Calibration
ICB	Initial Calibration Blank
ICP	Inductively Coupled Plasma
ICS	Interference Check Sample
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
IRDA	Inorganic Regional Data Assessment
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDC	Minimum Detectable Concentration
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
MSA	Method of Standard Addition
PB	Preparation Blank
PCB	Poly Chlorinated Biphenyl
PRP	Potential Responsible Party
QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control

%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
TR	Traffic Report
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
- For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

COMMUNICATION RECORDS

N/A

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

SUBJECT: USEPA Inorganic Data Validation Report
Metals
ALS Lab SDG No. ERT-001
Site: Fort Stewart, GA
MCGI Project No. ER121201-001-I

FROM: Sherif N. Mina
Meridian Consultant Group, Inc.

TO: Mr. Mike Gearheart
Earth Resources Technology, Inc.

OVERVIEW

This Sample Delivery Group (SDG) consisted of eighteen (18) soil and one (1) aqueous samples submitted to ALS Laboratories, Middletown, PA, for Metals analysis according to SW-846, Methods 6020A. The sample set included one (1) equipment blank, and two (2) soil field duplicate pairs. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	M
FTSW-AA-SO-10[02]	9980109001	Soil	x
FTSW-AA-SO-10[02] ERB	9980109002	Aqueous	x
FTSW-AA-SO-11	9980109003	Soil	x
FTSW-AA-SO-12 [01.5]	9980109004	Soil	x
FTSW-AA-SO-13	9980109005	Soil	x
FTSW-AA-SO-14 [02]	9980109006	Soil	x
FTSW-AA-SO-15	9980109007	Soil	x
FTSW-AA-SO-16 [01.5]	9980109008	Soil	x
FTSW-AA-SO-01	9980109009	Soil	x
FTSW-AA-SO-02 [01.5]	9980109010	Soil	x
FTSW-AA-SO-03	9980109011	Soil	x

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	M
FTSW-AA-SO-03 DUP	9980109012	Soil	x
FTSW-AA-SO-04 [01.5]	9980109013	Soil	x
FTSW-AA-SO-05	9980109014	Soil	x
FTSW-AA-SO-07	9980109015	Soil	x
FTSW-AA-SO-06 [01.5]	9980109016	Soil	x
FTSW-AA-SO-08 [02]	9980109017	Soil	x
FTSW-AA-SO-08 [02] DUP	9980109018	Soil	x
FTSW-AA-SO-09	9980109019	Soil	x

M=Metals

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The validation was based on the following parameters:

Data Validation Summary

	Parameters	M q	M t	M a
*	Data Completeness		19	0
*	Holding Time		19	0
*	Calibration Verification		19	0
*	Laboratory and Field Blanks analyses		19	0
*	ICP Interference Check Sample results		19	0
*	Matrix Spike recoveries (MS)		19	0
	Laboratory and Field Duplicates	*	19	18
*	Laboratory Control Sample(LCS)		19	0
*	Serial Dilution results		19	0
*	Furnace Atomic Absorption results (FAA)		19	0
*	Analyte Identification		19	0
*	Analyte Quantitation		19	0
* All Criteria were met for that Parameter, M=Metals				

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank
EB = Equipment Blank

- Laboratory Duplicate: The laboratory duplicate of sample FTSW-AA-SO-08 [02] displayed a Relative Percent Difference (RPD) outside the QC limits (greater than ±35 percent for values >5xCRDL, and ±2X CRDL for values <5xCRDL) for Al analyte. Positive results for Al in all soil samples were qualified "J".

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR): This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column

that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

ATTACHMENTS

l) Glossary of Data Qualifiers
2) Electronic Data Deliverable (EDD). These include:
   (a) All results for target analytes with qualifier codes where applicable.
   (b) All unusable detection limits (qualified "R"), where applicable.
3) Electronic Data Package (.pdf file) as Support Documentation

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Organic Data Validation.

Acronyms:

BFB	Bromofluorobenzene (volatile instrument performance check)
BNA	Base/Neutral/Acid
CARD	CLP Analytical Results Database
CCCs	Calibration Check Compounds
CCS	Contract Compliance Screening
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRQL	Contract Required Quantitation Limit
CSF	Complete SDG File
%D	Percent Difference
DAS	Delivery of Analytical Services
DCB	Decachlorobiphenyl (Pesticide/PCB/ surrogate compound)
DFTPP	Decafluorotriphenylphosphine (semivolatile instrument performance check)
DSF	Data Summary Form
ECD	Electron-Capture Detector
EICP	Extended Ion Current Profile
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
GC	Gas Chromatography
GC/EC	Gas Chromatography/Electron Capture
GC/MS	Gas Chromatography/Mass Spectra
GPC	Gel Permeation Chromatography (Clean Up)
ICAL	Initial Calibration
IS	Internal Standard
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
m/z	The ratio of mass (m) to charge (z) of ions measured by GC/MS
OADS	Organic Analysis Data Sheet (Form 1)
ORDA	Organic Regional Data Assessment
PCB	Poly Chlorinated Biphenyl
PEM	Performance Evaluation Mixture
PRP	Potential Responsible Party

QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control
%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RF	Response Factor
RIC	Reconstructed Ion Chromatogram
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
RT	Retention Time
RTW	Retention Time Window
SDG	Sample Delivery Group
SMC	System Monitoring Compound
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SPCCs	System Performance Check Compounds
SSL	Samples Shipping Log
SVOA	Semivolatile Organic Analyte
TCL	Target Compound List
TCX	Tetrachloro-m-Xylene (Pesticide/PCB surrogate compound)
TIC	Tentatively Identified Compound
TPH	Total Petroleum Hydrocarbons
TR	Traffic Report
UCL	Upper Control Limit
VOA	Volatile Organic Analyte
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples
: Any sample related to a particular QC analysis.

Case
: A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Contract Compliance Screening (CCS)
: A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbances and/or emissions versus concentration of the standards. .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Perform ance Evaluation Mixture

A standard used to verify that the ICAL sequence is stable throughout the GC or GC/MS analyses.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (ORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of compounds)

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample quantitation limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	=	Not detected. Quantitation limit may be inaccurate or imprecise.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical result.
X	=	Data not Validated.

OVERVIEW

This Sample Delivery Group (SDG) consisted of eighteen (18) soil and one (1) aqueous samples submitted to ALS Laboratories, Middletown, PA, for Explosives analysis according to SW-846, Method 8330. The sample set included one (1) equipment blank, and two (2) soil field duplicate pairs. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	X
FTSW-AA-SO-10[02]	9980109001	Soil	x
FTSW-AA-SO-10[02] ERB	9980109002	Aqueous	x
FTSW-AA-SO-11	9980109003	Soil	x
FTSW-AA-SO-12 [01.5]	9980109004	Soil	x
FTSW-AA-SO-13	9980109005	Soil	x

X=Explosives

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The validation was based on the following parameters:

Data Validation Summary

Parameters		X		
		q	t	a
*	Data Completeness		19	0
*	Holding Time		19	0
*	Calibrations		19	0
*	Laboratory and Field Blanks analyses		19	0
*	Surrogate Recoveries		19	0
*	Matrix Spike/Matrix Spike Duplicate		19	0
*	Laboratory Control Sample(LCS)		19	0
*	Laboratory and/or Field Duplicates		19	0
*	Internal Standards		19	0
*	Pesticide Instrument Performance		19	0
*	Sample Cleanup		19	0
*	Compound Identification		19	0
*	Compound Quantitation		19	0
*	Sample Preservation		19	0
* All Criteria were met for that Parameter, X=Explosives				

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target compounds according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- None noted.

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X) the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Inorganic Data Validation.

Acronyms:

AA	Atomic Absorption
CARD	CLP Analytical Results Database
CCB	Continuing Calibration Blank
CCS	Contract Compliance Screening
CCV	Continuing Calibration Verification
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRDL	Contract Required Detection Limit
CSF	Complete SDG File
CV	Cold Vapor
%D	Percent Difference
DAS	Delivery of Analytical Services
DSF	Data Summary Form
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
ICAL	Initial Calibration
ICB	Initial Calibration Blank
ICP	Inductively Coupled Plasma
ICS	Interference Check Sample
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
IRDA	Inorganic Regional Data Assessment
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDC	Minimum Detectable Concentration
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
MSA	Method of Standard Addition
PB	Preparation Blank
PCB	Poly Chlorinated Biphenyl
PRP	Potential Responsible Party
QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control

%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
TR	Traffic Report
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
- For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank
EB = Equipment Blank

- Matrix Spike/matrix spike duplicate (MS/MSD): The soil MS/SD displayed high recoveries for Al & Pb analytes. Positive results for these two (2) analytes were qualified "J".

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR): This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Organic Data Validation.

Acronyms:

BFB	Bromofluorobenzene (volatile instrument performance check)
BNA	Base/Neutral/Acid
CARD	CLP Analytical Results Database
CCCs	Calibration Check Compounds
CCS	Contract Compliance Screening
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRQL	Contract Required Quantitation Limit
CSF	Complete SDG File
%D	Percent Difference
DAS	Delivery of Analytical Services
DCB	Decachlorobiphenyl (Pesticide/PCB/ surrogate compound)
DFTPP	Decafluorotriphenylphosphine (semivolatile instrument performance check)
DSF	Data Summary Form
ECD	Electron-Capture Detector
EICP	Extended Ion Current Profile
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
GC	Gas Chromatography
GC/EC	Gas Chromatography/Electron Capture
GC/MS	Gas Chromatography/Mass Spectra
GPC	Gel Permeation Chromatography (Clean Up)
ICAL	Initial Calibration
IS	Internal Standard
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
m/z	The ratio of mass (m) to charge (z) of ions measured by GC/MS
OADS	Organic Analysis Data Sheet (Form 1)
ORDA	Organic Regional Data Assessment
PCB	Poly Chlorinated Biphenyl
PEM	Performance Evaluation Mixture
PRP	Potential Responsible Party

OVERVIEW

This Sample Delivery Group (SDG) consisted of six (6) soil and two (2) aqueous samples submitted to ALS Laboratories, Middletown, PA, for Explosives analysis according to SW-846, Method 8330. The sample set included one (1) equipment blank. No field duplicate pairs were identified in this sample set. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	X
FTSW-AA-SO-17	9980394001	Soil	x
FTSW-AA-SO-18 (01.5)	9980394002	Soil	x
FTSW-AA-SO-19	9980394003	Soil	x
FTSW-AA-SO-20 (01.5)	9980394004	Soil	x
FTSW-AA-SO-21	9980394005	Soil	x
FTSW-AA-SW-21	9980394006	Aqueous	x
FTSW-AA-SO-22	9980394007	Soil	x
FTSW-AA-SO-22 ERB	9980394014	Aqueous	x

X=Explosives

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The validation was based on the following parameters:

Data Validation Summary

Parameters		X		
		q	t	a
*	Data Completeness		8	0
*	Holding Time		8	0
*	Calibrations		8	0
*	Laboratory and Field Blanks analyses		8	0
	Surrogate Recoveries	*	8	1
*	Matrix Spike/Matrix Spike Duplicate		8	0
*	Laboratory Control Sample(LCS)		8	0
*	Laboratory and/or Field Duplicates		8	0
*	Internal Standards		8	0
*	Pesticide Instrument Performance		8	0
*	Sample Cleanup		8	0
*	Compound Identification		8	0
*	Compound Quantitation		8	0
*	Sample Preservation		8	0
* All Criteria were met for that Parameter, X=Explosives				

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target compounds according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- Surrogate Recoveries & Holding Time: The analysis of sample FTSW-AA-SW-21 displayed low surrogate recoveries. The sample was not re-analyzed due to holding time. No positive results were detected. Quantitation limits were qualified "UJ".

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X) the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Inorganic Data Validation.

Acronyms:

AA	Atomic Absorption
CARD	CLP Analytical Results Database
CCB	Continuing Calibration Blank
CCS	Contract Compliance Screening
CCV	Continuing Calibration Verification
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRDL	Contract Required Detection Limit
CSF	Complete SDG File
CV	Cold Vapor
%D	Percent Difference
DAS	Delivery of Analytical Services
DSF	Data Summary Form
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
ICAL	Initial Calibration
ICB	Initial Calibration Blank
ICP	Inductively Coupled Plasma
ICS	Interference Check Sample
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
IRDA	Inorganic Regional Data Assessment
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDC	Minimum Detectable Concentration
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
MSA	Method of Standard Addition
PB	Preparation Blank
PCB	Poly Chlorinated Biphenyl
PRP	Potential Responsible Party
QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control

%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
TR	Traffic Report
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
- For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

COMMUNICATION RECORDS

N/A

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type
As	PB

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank
EB = Equipment Blank

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR): This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

*	Compound Quantitation		12	0		12	0
*	Sample Preservation		12	0		12	0
* All Criteria were met for that Parameter, DO=1,4-Dithane & 1,4-Oxathiane, T=Thiodiglycol							

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target compounds according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- Holding Time: The aqueous sample FTSW-HR-SO-02(01.5)ERB was extracted for 1,4-Dithane, 1,4-Oxathiane two (2) days outside the technical holding time. Quantitation limits were qualified "UJ".

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses

of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X) the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

- Surrogate Recoveries: The base/neutral surrogate terphenyl-d14 displayed recovery above the QC limit in soil sample FTSW-HR-SO-06. No action was taken.

  The base/neutral surrogate Nitrobenzene-d5 displayed recovery above the QC limits in aqueous sample FTSW-HR-SO-02(01.5)ERB, and also in the Method Blank & LCS. No action was taken.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Inorganic Data Validation.

Acronyms:

AA	Atomic Absorption
CARD	CLP Analytical Results Database
CCB	Continuing Calibration Blank
CCS	Contract Compliance Screening
CCV	Continuing Calibration Verification
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRDL	Contract Required Detection Limit
CSF	Complete SDG File
CV	Cold Vapor
%D	Percent Difference
DAS	Delivery of Analytical Services
DSF	Data Summary Form
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
ICAL	Initial Calibration
ICB	Initial Calibration Blank
ICP	Inductively Coupled Plasma
ICS	Interference Check Sample
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
IRDA	Inorganic Regional Data Assessment
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDC	Minimum Detectable Concentration
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
MSA	Method of Standard Addition
PB	Preparation Blank
PCB	Poly Chlorinated Biphenyl
PRP	Potential Responsible Party
QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control

%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
TR	Traffic Report
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
- For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

COMMUNICATION RECORDS

N/A

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

OVERVIEW

This Sample Delivery Group (SDG) consisted of twenty-two (22) soil samples submitted to ALS Laboratories, Middletown, PA, for Arsenic (As) analysis according to SW-846, Methods 6020A. The sample set included two (2) soil field duplicate pairs. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the

EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank
EB = Equipment Blank

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

*	Compound Quantitation		22	0		22	0
*	Sample Preservation		22	0		22	0

* All Criteria were met for that Parameter, DO=1,4-Dithane & 1,4-Oxathiane, T=Thiodiglycol

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target compounds according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the

specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- None noted.

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X) the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

- Matrix Spike/Matrix Spike Duplicate (MS/MSD): The MS displayed low recoveries for 1,4-Dithane & 1,4-Oxathiane outside the QC limits. The MSD & LCS displayed all recoveries within the QC limits. No action was taken.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Inorganic Data Validation.

Acronyms:

AA	Atomic Absorption
CARD	CLP Analytical Results Database
CCB	Continuing Calibration Blank
CCS	Contract Compliance Screening
CCV	Continuing Calibration Verification
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRDL	Contract Required Detection Limit
CSF	Complete SDG File
CV	Cold Vapor
%D	Percent Difference
DAS	Delivery of Analytical Services
DSF	Data Summary Form
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
ICAL	Initial Calibration
ICB	Initial Calibration Blank
ICP	Inductively Coupled Plasma
ICS	Interference Check Sample
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
IRDA	Inorganic Regional Data Assessment
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDC	Minimum Detectable Concentration
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
MSA	Method of Standard Addition
PB	Preparation Blank
PCB	Poly Chlorinated Biphenyl
PRP	Potential Responsible Party
QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control

%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
TR	Traffic Report
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
- For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

COMMUNICATION RECORDS

N/A

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

OVERVIEW

This Sample Delivery Group (SDG) consisted of fourteen (14) soil and one (1) aqueous samples submitted to ALS Laboratories, Middletown, PA, for Arsenic (As) analysis according to SW-846, Methods 6020A. The sample set included one (1) equipment blank, and two (2) soil field duplicate pairs. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

* All Criteria were met for that Parameter, A=As				

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank
EB = Equipment Blank

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR): This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

REPORT CONTENT STATEMENT

The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X)

the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Inorganic Data Validation.

Acronyms:

AA	Atomic Absorption
CARD	CLP Analytical Results Database
CCB	Continuing Calibration Blank
CCS	Contract Compliance Screening
CCV	Continuing Calibration Verification
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRDL	Contract Required Detection Limit
CSF	Complete SDG File
CV	Cold Vapor
%D	Percent Difference
DAS	Delivery of Analytical Services
DSF	Data Summary Form
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
ICAL	Initial Calibration
ICB	Initial Calibration Blank
ICP	Inductively Coupled Plasma
ICS	Interference Check Sample
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
IRDA	Inorganic Regional Data Assessment
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDC	Minimum Detectable Concentration
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
MSA	Method of Standard Addition
PB	Preparation Blank
PCB	Poly Chlorinated Biphenyl
PRP	Potential Responsible Party
QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control

%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
SDG	Sample Delivery Group
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SSL	Samples Shipping Log
TAL	Target Analyte List
TR	Traffic Report
UCL	Upper Control Limit
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples

Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
- For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

COMMUNICATION RECORDS

N/A

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

SUBJECT: USEPA Inorganic Data Validation Report
Metals & Arsenic
ALS Lab SDG No. ERT-006
Site: Fort Stewart, GA
MCGI Project No. ER121201-006-I

FROM: Sherif N. Mina
Meridian Consultant Group, Inc.

TO: Mr. Mike Gearheart
Earth Resources Technology, Inc.

OVERVIEW

This Sample Delivery Group (SDG) consisted of eleven (11) soil samples submitted to ALS Laboratories, Middletown, PA, for Metals & Arsenic (As) analysis according to SW-846, Methods 6020A. The sample set included one (1) soil field duplicate pair. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

SAMPLE INFORMATION			Analysis	
Field ID	Lab ID	Matrix	M	A
FTSW-HR-SO-43	9981198001	Soil		x
FTSW-HR-SO-44	9981198002	Soil		x
FTSW-HR-SO-45	9981198003	Soil		x
FTSW-HR-SO-46	9981198004	Soil		x
FTSW-HR-SO-46 DUP	9981198005	Soil		x
FTSW-HR-SO-47	9981198006	Soil		x
FTSW-HR-SO-48	9981198007	Soil		x
FTSW-HR-SO-49	9981198008	Soil		x
FTSW-AA-SO-30	9981198009	Soil	x	
FTSW-AA-SO-31	9981198010	Soil	x	
FTSW-AA-SO-32	9981198011	Soil	x	

M=Metals, A=As

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The validation was based on the following parameters:

Data Validation Summary

	Parameters	M			A		
		q	t	a	q	t	a
*	Data Completeness		3	0		8	0
*	Holding Time		3	0		8	0
*	Calibration Verification		3	0		8	0
*	Laboratory and Field Blanks analyses		3	0		8	0
*	ICP Interference Check Sample results		3	0		8	0
*	Matrix Spike recoveries (MS)		3	0		8	0
*	Laboratory and Field Duplicates		3	0		8	0
*	Laboratory Control Sample(LCS)		3	0		8	0
*	Serial Dilution results		3	0		8	0
*	Furnace Atomic Absorption results (FAA)		3	0		8	0
*	Analyte Identification		3	0		8	0
*	Analyte Quantitation		3	0		8	0
* All Criteria were met for that Parameter, M=Metals, A=As							

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank
EB = Equipment Blank

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR): This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Laboratory Duplicate: The laboratory flagged the Al analyte in the soil laboratory duplicate as being outside the QC limits. However, this analyte displayed a Relative Percent Difference (RPD) less than ±35 percent for values >5xCRDL, and ±2X CRDL for values <5xCRDL, no action was taken.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

SUMMARY

All samples were successfully analyzed for all target compounds according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- None noted.

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X) the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

Terms:

Associated Samples

Any sample related to a particular QC analysis. For Example:
- For ICV, all samples run under the same calibration curve.
- For duplicate RPD, all SDG samples digested/distilled of the same matrix.

Case A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Continuing Calibration Blank (CCB)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Continuing Calibration Verification (CCV)

A deionized water sample run every ten (10) samples designed to detect any carryover contamination.

Contract Compliance Screening (CCS)

A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

OVERVIEW

This Sample Delivery Group (SDG) consisted of eleven (11) soil and one (1) aqueous samples submitted to ALS Laboratories, Middletown, PA, for Arsenic (As) analysis according to SW-846, Methods 6020A. The sample set included one (1) equipment blank, and one (1) soil field duplicate pair. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	A
FTSW-HR-SO-50 (10)	9981496001	Soil	x
FTSW-HR-SO-51 (10)	9981496002	Soil	x
FTSW-HR-SO-52 (10)	9981496003	Soil	x
FTSW-HR-SO-53 (10)	9981496004	Soil	x
FTSW-HR-SO-54 (10)	9981496005	Soil	x
FTSW-HR-SO-55 (07.5)	9981496006	Soil	x
FTSW-HR-SO-56 (10)	9981496007	Soil	x
FTSW-HR-SO-57 (10)	9981496008	Soil	x
FTSW-HR-SO-58 (10)	9981496009	Soil	x
FTSW-HR-SO-59 (10)	9981496010	Soil	x
FTSW-HR-SO-60 (07.5)	9981496011	Soil	x

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	A
FTSW-HR-SO-60 (07.5) ERB	9981496012	Aqueous	x

A=As

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The validation was based on the following parameters:

Data Validation Summary

	Parameters	A		
		q	t	a
*	Data Completeness		12	0
*	Holding Time		12	0
*	Calibration Verification		12	0
*	Laboratory and Field Blanks analyses		12	0
*	ICP Interference Check Sample results		12	0
*	Matrix Spike recoveries (MS)		12	0
*	Laboratory and Field Duplicates		12	0
*	Laboratory Control Sample(LCS)		12	0
*	Serial Dilution results		12	0
*	Furnace Atomic Absorption results (FAA)		12	0
*	Analyte Identification		12	0
*	Analyte Quantitation		12	0
* All Criteria were met for that Parameter, M=Metals, A=As				

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank
EB = Equipment Blank

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR): This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

SUMMARY

All samples were successfully analyzed for all target compounds according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- None noted.

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X) the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

- Surrogate Recoveries: The base/neutral surrogate 2-Fluorobiphenyl displayed recoveries lower than the QC limit in soil samples FTSW-HR-SO-51 (10), FTSW-HR-SO-52 (10), FTSW-HR-SO-53 (10) & 289973-MB. No action was taken.

  The base/neutral surrogate terphenyl-d14 displayed recovery above the QC limit in soil sample FTSW-HR-SO-59 (10). No action was taken.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbancies and/or emissions versus concentration of the standards.

.

Initial Calibration Blank (ICB)

First blank run after the calibration curve .

Initial Calibration Verification (ICV)

First standard run after the calibration curve .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Post Digestion Spike

The addition of known amount of standard after digestion. (Also identified as analytical spike, or spike, for furnace analyses.)

Preparation Blank (PB)

Blank taken through the digestion process to detect internal laboratory contamination.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Serial Dilution

A sample run at a specific dilution to determine whether any significant chemical or physical interferences exist due to sample matrix effect, for ICP only.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis.

GLOSSARY OF DATA VALIDATION QUALIFIERS

GLOSSARY OF DATA QUALIFIER CODES (INORGANIC)

CODES RELATED TO IDENTIFICATION:

(Confidence concerning presence or absence of analytes).

U	=	Not detected above the level of the associated value. The associated value is either the approximate sample quantitation or detection limit.
NO CODE	=	Confirmed identification
B	=	Not detected substantially above the level reported in laboratory or field blanks.
R	=	Unusable results. Analyte may or may not be present in the sample.
N	=	Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.

CODES RELATED TO QUANTITATION:

(Can be used for both positive results and sample detection limits)

J	=	Analyte present. Reported value may not be accurate or precise (estimated value).
K	=	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	=	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
[ ]	=	Analyte present. Value approaches the IDL, but less than the quantitation limit. The quantitation may not be accurate.
UJ	=	Not detected. Quantitation limit may be inaccurate or impresice.
UL	=	Not detected. Quantitation limit is probably higher.

OTHER CODES:

NJ	=	Qualitative identification questionable. Presumptively present at approximate quantity.
Q	=	No analytical Result.
X	=	Data not validated.

SUBJECT: USEPA Inorganic Data Validation Report
Arsenic
ALS Lab SDG No. ERT-008
Site: Fort Stewart, GA
MCGI Project No. ER121201-008-I

FROM: Sherif N. Mina
Meridian Consultant Group, Inc.

TO: Mr. Mike Gearheart
Earth Resources Technology, Inc.

OVERVIEW

This Sample Delivery Group (SDG) consisted of two (2) soil samples submitted to ALS Laboratories, Middletown, PA, for Arsenic (As) analysis according to SW-846, Methods 6020A. No field duplicate pairs were identified in this sample set. The samples were analyzed in accordance with the Chain-of-Custody (COC), see Sample Identification Summary.

Sample Identification Summary

SAMPLE INFORMATION			Analysis
Field ID	Lab ID	Matrix	A
FTSW-HR-SO-61 (09.5)	9981774001	Soil	x
FTSW-HR-SO-62 (10)	9981774002	Soil	x

A=As

The analytical results were validated according to the pertinent parts of U.S. Environmental Protection Agency (USEPA) National Functional for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The validation was based on the following parameters:

Data Validation Summary

	Parameters	A q	A t	A a
*	Data Completeness		2	0
*	Holding Time		2	0
*	Calibration Verification		2	0
*	Laboratory and Field Blanks analyses		2	0
*	ICP Interference Check Sample results		2	0
*	Matrix Spike recoveries (MS)		2	0
*	Laboratory and Field Duplicates		2	0
*	Laboratory Control Sample(LCS)		2	0
*	Serial Dilution results		2	0
*	Furnace Atomic Absorption results (FAA)		2	0
*	Analyte Identification		2	0
*	Analyte Quantitation		2	0
* All Criteria were met for that Parameter, M=Metals, A=As				

q=qualified; t=total number of samples analyzed; a=number of samples affected

SUMMARY

All samples were successfully analyzed for all target analytes according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR ISSUES

- None noted.

MINOR ISSUES

- Laboratory and Field Blanks analyses: Analytes detected in the laboratory and/or equipment blanks, that affect sample results, with concentration above the instrument detection limit (IDL) are listed below. Analytes in the samples with concentration less than five (5) times the blank concentration have been reported on the EDD and qualified "B".

Analyte	Blank Type

PB = Preparation Blank
ICB = Initial Calibration Blank
CCB = Continuing Calibration Blank
CB = Container Blank

EB = Equipment Blank

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ): This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR): This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Inorganic Data Review, dated October 2004; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

GLOSSARY OF ACRONYMS & TERMS

GLOSSARY OF ACRONYMS & TERMS

One or more of the following acronyms and terms may have been used in the descriptive process of the Organic Data Validation.

Acronyms:

BFB	Bromofluorobenzene (volatile instrument performance check)
BNA	Base/Neutral/Acid
CARD	CLP Analytical Results Database
CCCs	Calibration Check Compounds
CCS	Contract Compliance Screening
CF	Calibration Factor
CLP	Contract Laboratory Program
COC	Chain of Custody
CRQL	Contract Required Quantitation Limit
CSF	Complete SDG File
%D	Percent Difference
DAS	Delivery of Analytical Services
DCB	Decachlorobiphenyl (Pesticide/PCB/ surrogate compound)
DFTPP	Decafluorotriphenylphosphine (semivolatile instrument performance check)
DSF	Data Summary Form
ECD	Electron-Capture Detector
EICP	Extended Ion Current Profile
EMSL-LV	Environmental Monitoring Support Laboratory - Las Vegas
EPA	United States Environmental Protection Agency
GC	Gas Chromatography
GC/EC	Gas Chromatography/Electron Capture
GC/MS	Gas Chromatography/Mass Spectra
GPC	Gel Permeation Chromatography (Clean Up)
ICAL	Initial Calibration
IS	Internal Standard
LCS	Laboratory Control Sample
LCL	Lower Control Limit
MCL	Maximum Contamination Level
MDL	Method Detection Limit
MS/MSD	Matrix Spike/Matrix Spike Duplicate
m/z	The ratio of mass (m) to charge (z) of ions measured by GC/MS
OADS	Organic Analysis Data Sheet (Form 1)
ORDA	Organic Regional Data Assessment
PCB	Poly Chlorinated Biphenyl
PEM	Performance Evaluation Mixture
PRP	Potential Responsible Party

QA/QC	Quality Assurance/Quality Control
QAPjP	Quality Assurance Project Plan
QC	Quality Control
%R	Percent Recovery of spiked amount
RAS	Routine Analytical Services
RF	Response Factor
RIC	Reconstructed Ion Chromatogram
RPD	Relative Percent Difference
RRF	Relative Response Factor
RSD	Relative Standard Deviation
RT	Retention Time
RTW	Retention Time Window
SDG	Sample Delivery Group
SMC	System Monitoring Compound
SMO	Sample Management Office
SOP	Standard Operation Procedures
SOW	Statement of Work
SPCCs	System Performance Check Compounds
SSL	Samples Shipping Log
SVOA	Semivolatile Organic Analyte
TCL	Target Compound List
TCX	Tetrachloro-m-Xylene (Pesticide/PCB surrogate compound)
TIC	Tentatively Identified Compound
TPH	Total Petroleum Hydrocarbons
TR	Traffic Report
UCL	Upper Control Limit
VOA	Volatile Organic Analyte
VTSR	Validated Time of Sample Receipt

Terms:

Associated Samples
: Any sample related to a particular QC analysis.

Case
: A finite, usually predetermined number of samples collected over a given time period for a particular site. A Case consists of one or more Sample Delivery Group(s).

Contract Compliance Screening (CCS)
: A process in which the SMO inspects the data for contractual compliance and provides EMSL-LV laboratories and the Regions with their findings.

Contractual Holding Time

The time from VTSR (validated time of sample receipt) to laboratory extraction and /or analysis.

Data Validation Qualifier (DVQ)

This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

Data Validation Result (DVR)

This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit.

Field Blank Field blanks are intended to identify contaminants that may have been introduced in the field. Examples are rinsate blank (RB), field blanks (FB) and trip blank (TB).

Field Duplicate

A duplicate sample generated in the field; not in the laboratory.

Initial Calibration (ICAL)

The establishment of a calibration curve with the appropriate number of standards and concentration ranges. The calibration curve plots absorbances and/or emissions versus concentration of the standards. .

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Introduction of a known concentration of a compound into a sample to provide information about the effect of sample matrix on the extraction and/or measurement methodology.

Perform ance Evaluation Mixture

A standard used to verify that the ICAL sequence is stable throughout the GC or GC/MS analyses.

Sample Delivery Group (SDG)

Defined by one of the following, whichever occurs first:

- case of sample
- each twenty field samples in a case or
- each 14-day calendar period during which field samples in a case are received, beginning with the receipt of the first sample in the SDG.

Technical Holding Time

The time from sample collection to laboratory extraction and /or analysis

SUMMARY

All samples were successfully analyzed for all target compounds according to U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. All instruments and method sensitivities were according to the specified analytical methods. Refer to Minor Problems for information regarding biases identified during data validation.

Deviation from USEPA NFG: The "U" qualifier recommended by USEPA NFG for blank contamination was replaced by the "B" qualifier to clearly indicate blank contamination on the EDDs.

MAJOR PROBLEMS

- None noted.

MINOR PROBLEMS

- None noted.

NOTES

- Electronic Data Deliverable (EDD): Several rows in an electronic data deliverable (EDD) are marked with an "X" and hidden before printing a data summary form. These rows may include quality control samples such as Method Blanks, Laboratory Control Samples, Matrix Spikes, or Matrix Spike Duplicates which are not validated. Additionally, some field sample results may not be used since only one (1) result for each compound is reported after validation. The following list indicates some instances in which an "X" may be placed in the DVQ column:
  1. The compounds in an analysis that have exceeded the instrument calibration range.
  2. All compounds in a diluted analysis that were within the calibration range in the initial analysis.
  3. All compounds in either the initial analysis or re-analysis of a sample, depending on which analysis is not reported on the EDD.

  Although QC samples and some field samples results may not be used, all data were reviewed and considered in the overall assessment.

- Data Validation Qualifier (DVQ):This refers to the column on the data summary form in which EPA Region III and other qualifiers have been placed by the data validator.

- Data Validation Result (DVR):This refers to the column on the data summary form used to report results that have been modified by the data validator. A result in the DVR column that is qualified "U" indicates a modification of the reporting limit. Results in the DVR column supersede those reported by the laboratory.

- Tentatively Identified Compounds (TICs): The TICs, if applicable, were reviewed during data validation.

- Compound Quantitation: Positive results for compounds which are below the CRQL were qualified as estimated "J" on the EDD.

- Blank Contaminants: The maximum concentration of all compounds found in the analyses of the trip, field or laboratory method blanks are listed in the following table. Associated samples with positive results of common laboratory contaminants less than ten times (<10X) the blank concentration, or positive results of other contaminants less than five times (<5X) the blank concentration, found in the associated samples were qualified as "B" on the DSFs.

Analytical Fraction	Compound	Maximum Concentration	Units	Blank Type
	None			

*Common lab contaminant

REPORT CONTENT STATEMENT

All data for this project were reviewed in accordance with the pertinent parts of the U.S. Environmental Protection Agency (USEPA) National Functional Guideline for Organic Data Review, dated June 2008; along with the Quality Assurance/Quality Control (QA/QC) requirements for the analytical methods used for the analyses. The text of the report addresses only those problems affecting data usability.

Surface Water Screening Benchmarks	For aluminum: EPA Freshwater Aquatic Life Criteria Table (USEPA, 1988) expressed in terms of total recoverable metal in the water column For copper, lead, and zinc: Georgia In-Stream Water Quality Standards - Freshwater Chronic (2012) 1. Assuming water hardness=50 mg/L $CaCO^3$ 2. Assuming water hardness=100 mg/L $CaCO^3$
Groundwater Background	From SAIC 1999 (Appendix F, Table F-9)

Table F-8. Exposure Factors for Current Outdoor Worker (Surface Soil)			
Exposure Factor	**Scenario [a/]**	**Rationale**	**Reference**
BW = Body Weight 80 kg [b/]	RME	Standard reference weight for adult males	USEPA, 2014a
EF = Exposure Frequency 225 days/yr	RME	Assumes year-round weekday exposure	USEPA, 2014a
ED = Exposure Duration 25 years	RME	Upper bound time at one place of employment	USEPA, 2011b
SA = Surface Area 3,470 cm^2 [d/]	RME	Exposed skin surface area (95th percentile adult skin surface area for head, arms, hands)	USEPA, 2014a
AT = Averaging Time 25,500 days (carcinogens) ED x 365 days/year (noncarcinogens)	RME	Conventional human lifespan. Intakes for carcinogens are averaged over the duration of exposure. Equal to the exposure duration (in days).	USEPA, 1989b
FI = Fraction Ingested (unitless) 1.0	RME	RME conservatively assumes 100 percent of daily soil incidental ingestion occurs on-site.	Professional judgment
DAF = Dermal Absorption Fraction Chemical-specific	RME	None specified for aluminum; for arsenic, 3% - used as default. Value in the past was 1% for inorganics (USEPA, 1995a)	USEPA, 2004a
OAF = Oral Absorption Fraction Chemical-specific	RME	100%	Assumed
IR = Incidental Soil Ingestion Rate 100 mg/day [e/]	RME	Default soil incidental ingestion rate for workers.	USEPA, 2014a
AF = Soil-to-Skin Adherence Factor 0.12 mg/cm^2-day [f/]	RME	Activity and body part-specific weighted based on exposed body parts.	USEPA, 2014a
ET = Fraction of EF breathing contaminated outdoor air (unitless) 33%	RME	Based on 8/24 hours per day (33 percent) of day spent outdoors at contaminated site.	Professional judgment

Notes:
a. RME = Reasonable Maximum Exposure
b. kg = kilogram
c. days/yr = days per year
d. cm^2 = square centimeters
e. mg/day = milligrams per day
f. mg/cm^2-day = milligrams per square centimeter-day

Table F-9. Exposure Factors for Future Construction Worker (Mixed Surface/Subsurface Soil)			
Exposure Factor	**Scenario [a/]**	**Rationale**	**Reference**
BW = Body Weight 80 kg [b/]	RME	Standard reference weight for adult males	USEPA, 2014a
EF = Exposure Frequency 225 days/yr [c/]	RME	Assumes year-round weekday exposure	USEPA, 2014a
ED = Exposure Duration 2 years	RME	Assumption for upper bound length of time of construction	Professional judgment
SA = Surface Area 3,470 cm^2 [d/]	RME	Standard default skin surface area (95th percentile adult skin surface area for head, arms, hands).	USEPA, 2014a
AT = Averaging Time (non-carcinogens) ED * 365 days/year	RME		USEPA, 1989b
AT = Averaging Time (carcinogens) 25,500 days	RME	Conventional human lifespan. Intakes for carcinogens are averaged over the duration of exposure	USEPA, 1989b
FI = Fraction Ingested (unitless) 1.0	RME	RME conservatively assumes 100 percent of daily soil incidental ingestion occurs on-site.	Professional judgment
DAF = Dermal Absorption Fraction Chemical-specific	RME	None specified for aluminum; for arsenic, 3% - use as default. Value in the past was 1% for inorganics (USEPA, 1995)	USEPA, 2004a
OAF = Oral Absorption Fraction Chemical-specific	RME	100%	Assumed
IR = Incidental Soil Ingestion Rate 100 mg/day [e/]	RME	Default soil incidental ingestion rate for workers.	USEPA, 2014a
AF = Soil-to-Skin Adherence Factor 0.12 mg/cm^2-day [f/]	RME	Activity and body part-specific weighted based on exposed body parts.	USEPA, 2014a
ET = Fraction of EF breathing contaminated outdoor air (unitless) 33%	RME	Based on 8/24 hours per day (33 percent) of day spent outdoors at contaminated site.	Professional judgment

Notes:
a/ RME = Reasonable Maximum Exposure
b/ kg = kilogram
c/ days/yr = days per year
d/ cm^2 = square centimeters
e/ mg/day = milligrams per day
f/ mg/cm^2-day = milligrams per square centimeter-day

Table F-10. Exposure Factors for Current Trespasser (Surface Soil)			
Exposure Factor	**Scenario [a/]**	**Rationale**	**Reference**
BW = Body Weight 45 kg [b/]	RME	Typical trespasser is represented by an adolescent aged 7-16 years old.	GAEPD guidance
EF = Exposure Frequency 100 days/yr [c/]	RME	GAEPD guidance.	GAEPD guidance
ED = Exposure Duration 10 years	RME	Upper bound time living in one location.	USEPA, 1997a
SA = Surface Area 3,470 cm^2 [d/]	RME	Standard default skin surface area (95th percentile adult skin surface area for head, arms, hands).	USEPA, 2004a
AT = Averaging Time 25,500 days (carcinogens)	RME	Conventional human lifespan. Intakes for carcinogens are averaged over the duration of exposure.	USEPA, 1989b
FI = Fraction Ingested (unitless) 1.0	RME	RME conservatively assumes 100 percent of daily soil incidental ingestion occurs on-site.	Professional judgment
DAF = Dermal Absorption Fraction Chemical-specific	RME	Chemical-specific.	USEPA, 2004a
OAF = Oral Absorption Fraction Chemical-specific	RME	Chemical-specific.	USEPA, 2004a
IR = Incidental Soil Ingestion Rate 100 mg/day [e/]	RME	Default soil incidental ingestion rate for adult residents.	USEPA, 2014a
AF = Soil-to-Skin Adherence Factor 0.07 mg/cm^2-day [f/]	RME	Mean adherence factor for face, arms, hands, legs, and feet for gardening activities.	USEPA, 2014a
ET = Fraction of EF breathing contaminated outdoor air (unitless) 33%	RME	Based on 8/24 hours per day (33 percent) of day spent outdoors at contaminated site.	Professional judgment

Notes:
a/ RME = Reasonable Maximum Exposure
b/ kg = kilogram
c/ days/yr = days per year
d/ cm^2 = square centimeters
e/ mg/day = milligrams per day
f/ mg/cm^2-day = milligrams per square centimeter-day

Table F-11. Exposure Factors for Future Adult Resident (Mixed Surface/Subsurface Soil)			
Exposure Factor	**Scenario [a/]**	**Rationale**	**Reference**
BW = Body Weight 80 kg [b/]	RME	Standard reference weight for adult males	USEPA, 2014a
EF = Exposure Frequency 350 days/yr [c/]	RME	Assumes year-round exposure with one 2-week vacation	Professional judgment
ED = Exposure Duration 20 years	RME	Upper bound time at one residence	USEPA, 2014a
SA = Surface Area 6,032 cm^2 [d/]	RME	Exposed skin surface area (for head, arms, hands, legs, and feet.)	USEPA, 2014a
AT = Averaging Time (non-carcinogens) ED * 365 days/year	RME		USEPA, 1989b
AT = Averaging Time 25,500 days (carcinogens)	RME	Conventional human lifespan. Intakes for carcinogens are averaged over the duration of exposure.	USEPA, 1989b
FI = Fraction Ingested (unitless) 1.0	RME	RME conservatively assumes 100 percent of daily soil incidental ingestion occurs on-site.	Professional judgment

OAF = Oral Absorption Fraction Chemical-specific	RME	100%	Assumed
IR = Incidental Soil Ingestion Rate 100 mg/day [e/]	RME	Default soil incidental ingestion rate for adult residents.	USEPA, 2014a
AF = Soil-to-Skin Adherence Factor 0.07 mg/cm^2-day [f/]	RME	Mean adherence factor for face, arms, hands, legs, and feet for gardening activities.	USEPA, 2014a
ET = Fraction of EF breathing contaminated outdoor air (unitless) 100%	RME	Based on 24 hours per day (100 percent) of day exposed to dust from site.	Professional judgment

Notes:
a. RME = Reasonable Maximum Exposure
b. kg = kilogram
c. days/yr = days per year
d. cm^2 = square centimeters
e. mg/day = milligrams per day
f. mg/cm^2-day = milligrams per square centimeter-day

Table F-12. Exposure Factors for Future Child Resident (Mixed Surface/ Subsurface Soil)			
Exposure Variable	**Scenario [a/]**	**Rationale**	**Reference**
BW = Body Weight 15 kg [b/]	RME	Average body weight for children (1 to 6 years).	USEPA, 2011b
EF = Exposure Frequency 350 days/yr [c/]	RME	Assumes year-round exposure with one 2-week vacation.	Professional judgment
ED = Exposure Duration 6 years	RME	Time for ages 0 to 6 at one residence.	USEPA, 2011b
SA = Surface Area 2,690 cm^2 [d/]	RME	Assumed contact with head, arms, hands, legs, and feet.	USEPA, 2014a
AT = Averaging Time 25,500 days (carcinogens) ED x 365 days/year (noncarcinogens)	RME RME	Conventional human lifespan. Intakes for carcinogens are averaged over the duration of exposure. Equal to the exposure duration (in days).	USEPA, 1989b USEPA, 1989b
FI = Fraction Ingested 1.0 (unitless)	RME	Conservatively assume 100 percent of daily soil incidental ingestion occurs on-site.	Professional judgment
DAF = Dermal Absorption Fraction Chemical-specific	RME	None specified for aluminum; for arsenic, 3% - used as default. Value in the past was 1% for inorganics (USEPA, 1995)	USEPA, 2004a
OAF = Oral Absorption Fraction Chemical-specific	RME	100%	Assumed
IR = Incidental Soil Ingestion Rate 200 mg/day	RME	Default EPA soil ingestion rates for children	USEPA, 2011b
AF = Soil-to-Skin Adherence Factor 0.2 mg/cm^2 [f/]	RME	Mean adherence factor for arms, hands, legs, and feet for daycare children, playing both indoors and outdoors	USEPA, 2014a
ET = Exposure Time 8 hours/day	RME	8 hours/day outdoors	Professional judgment

a. RME = Reasonable Maximum Exposure
b. kg = kilogram
c. days/yr = days per year
d. cm^2 = square centimeters
e. mg/day = milligrams per day
f. mg/cm^2 = milligrams per square centimeter

Table A

MRS Background Information

DIRECTIONS: Record the background information below for the MRS to be evaluated. Much of this information is available from Service and DoD databases. If the MRS is located on a FUDS property, the suitable FUDS property information should be substituted. In the **MRS Summary**, briefly describe the UXO, DMM, or MC that are known or suspected to be present, the exposure setting (the MRS's physical environment), any other incidental nonmunitions-related contaminants (e.g., benzene, trichloroethylene) found at the MRS, and any potentially exposed human and ecological receptors. If possible, include a map of the MRS.

Munitions Response Site Name: Hero Road Trench Area (FTSW-008-R-01)

Component: U.S. Army

Installation/Property Name: Fort Stewart

Location (City, County, State): Fort Stewart, Liberty County, GA

Site Name/Project Name (Project No.): Fort Stewart MRSPP RFI (W912DR-09-D-0012 DO 001)

Date Information Entered/Updated: November 2012 (prepared by ERT)

Point of Contact (Name/Phone): Travis McCoun 410-962-6728

Project Phase (check only one):

❑ PA	❑SI	☑ RFI	❑ FS	❑ RD
❑ RA-C	❑ RI	❑ RA-O	❑RC	❑ LTM

Media Evaluated (check all that apply):

❑ Groundwater	❑ Sediment (human receptor)
☑ Surface soil	❑ Surface Water (ecological receptor)
❑ Sediment (ecological receptor)	❑ Surface Water (human receptor)

MRS Summary:

MRS Description: Describe the munitions-related activities that occurred at the installation, the dates of operation, and the UXO, DMM, or MC known or suspected to be present. When possible, identify munitions, CWM, and MC by type: Aerial photographs indicate disturbances from January 1941 to January 1957 that are indicative of possible improper burial activities associated with dilute agent CAIS kit. No munitions and explosives of concern (MEC) or munitions debris (MD) are expected to be present at this MRS.

Description of Pathways for Human and Ecological Receptors: Pathways for human and ecological receptors are incomplete for exposure to MC in surface and subsurface soil; no chemicals of potential concern were identified for this MRS (Section 5.5.2; ERT, 2014).

Description of Receptors (Human and Ecological): The current human receptors of the Hero Road Trench Area are authorized outdoor and construction workers, and trespassers. Future receptors also include future residents. There are a variety of biota at this MRS (Section 5.5.2; ERT, 2014).

Table 1

EHE Module: Munitions Type Data Element Table

DIRECTIONS: Below are 11 classifications of munitions and their descriptions. Circle the scores that correspond with **all** the munitions types known or suspected to be present at the MRS.

Note: The terms *practice munitions, small arms ammunition, physical evidence,* and *historical evidence* are defined in Appendix C of the Primer.

Classification	Description	Score
Sensitive	◆ UXO that are considered most likely to function upon any interaction with exposed persons (e.g., submunitions, 40mm high-explosive [HE] grenades, white phosphorus [WP] munitions, high-explosive antitank [HEAT] munitions, and practice munitions with sensitive fuzes, but excluding all other practice munitions). ◆ Hand grenades containing energetic filler. ◆ Bulk primary explosives, or mixtures of these with environmental media, such that the mixture poses an explosive hazard.	30
High explosive (used or damaged)	◆ UXO containing a high-explosive filler (e.g., RDX, Composition B), that are not considered "sensitive." ◆ DMM containing a high-explosive filler that have: ▪ Been damaged by burning or detonation ▪ Deteriorated to the point of instability.	25
Pyrotechnic (used or damaged)	◆ UXO containing a pyrotechnic filler other than white phosphorus (e.g., flares, signals, simulators, smoke grenades). ◆ DMM containing a pyrotechnic filler other than white phosphorus (e.g., flares, signals, simulators, smoke grenades) that have: ▪ Been damaged by burning or detonation ▪ Deteriorated to the point of instability.	20
High explosive (unused)	◆ DMM containing a high-explosive filler that: ▪ Have not been damaged by burning or detonation ▪ Are not deteriorated to the point of instability.	15
Propellant	◆ UXO containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor). ◆ DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor) that are: ▪ Damaged by burning or detonation ▪ Deteriorated to the point of instability.	15
Bulk secondary high explosives, pyrotechnics, or propellant	◆ DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor). ◆ DMM that are bulk secondary high explosives, pyrotechnic compositions, or propellant (not contained in a munition), or mixtures of these with environmental media such that the mixture poses an explosive hazard.	10
Pyrotechnic (not used or damaged)	◆ DMM containing a pyrotechnic filler (i.e., red phosphorus), other than white phosphorus filler, that: ▪ Have not been damaged by burning or detonation ▪ Are not deteriorated to the point of instability.	10
Practice	◆ UXO that are practice munitions that are not associated with a sensitive fuze. ◆ DMM that are practice munitions that are not associated with a sensitive fuze and that have not: ▪ Been damaged by burning or detonation ▪ Deteriorated to the point of instability.	5
Riot control	◆ UXO or DMM containing a riot control agent filler (e.g., tear gas).	3
Small arms	◆ Used munitions or DMM that are categorized as small arms ammunition. (Physical evidence or historical evidence that no other types of munitions [e.g., grenades, subcaliber training rockets, demolition charges] were used or are present on the MRS is required for selection of this category.)	2
Evidence of no munitions	◆ Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	**0**
MUNITIONS TYPE	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 30).	**0**

DIRECTIONS: Document any MRS-specific data used in selecting the ***Munitions Type*** classifications in the space provided.

This MRS was investigated for MC only. No MEC or MD is expected at this MRS and nothing was found during the RFI (Section 5.1.2; ERT, 2014).

Tables 2-9
EHE Module

Because there is there is no evidence of munitions at this MRS, Tables 2-9 have been omitted according to Active Army Guidance (U.S. Army, 2009).

Table 10
Determining the EHE Module Rating

DIRECTIONS:

1. From Tables 1–9, record the data element scores in the **Score** boxes to the right.
2. Add the **Score** boxes for each of the three factors and record this number in the **Value** boxes to the right.
3. Add the three **Value** boxes and record this number in the **EHE Module Total** box below.
4. Circle the appropriate range for the **EHE Module Total** below.
5. Circle the **EHE Module Rating** that corresponds to the range selected and record this value in the **EHE Module Rating** box found at the bottom of the table.

Note:
An alternative module rating may be assigned when a module letter rating is inappropriate. An alternative module rating is used when more information is needed to score one or more data elements, contamination at an MRS was previously addressed, or there is no reason to suspect contamination was ever present at an MRS.

Table 11

CHE Module: CWM Configuration Data Element Table

DIRECTIONS: Below are seven classifications of CWM configuration and their descriptions. Circle the scores that correspond with **all** the CWM configurations known or suspected to be present at the MRS.

Note: The terms *CWM/UXO, CWM/DMM, physical evidence,* and *historical evidence* are defined in Appendix C of the Primer.

Classification	Description	Score
CWM, that are either UXO, or explosively configured damaged DMM	The CWM known or suspected of being present at the MRS are: ◆ CWM that are UXO (i.e., CWM/UXO) ◆ Explosively configured CWM that are DMM (i.e., CWM/DMM) that have been damaged.	30
CWM mixed with UXO	◆ The CWM known or suspected of being present at the MRS are undamaged CWM/DMM or CWM not configured as a munition that are commingled with conventional munitions that are UXO.	25
CWM, explosive configuration that are undamaged DMM	◆ The CWM known or suspected of being present at the MRS are explosively configured CWM/DMM that have not been damaged.	20
CWM/DMM, not explosively configured or CWM, bulk container	The CWM known or suspected of being present at the MRS are: ◆ Nonexplosively configured CWM/DMM either damaged or undamaged ◆ Bulk CWM (e.g., ton container).	15
CAIS K941 and CAIS K942	◆ The CWM/DMM known or suspected of being present at the MRS are CAIS K941-toxic gas set M-1 or CAIS K942-toxic gas set M-2/E11.	12
CAIS (chemical agent identification sets)	◆ CAIS, other than CAIS K941 and K942, are known or suspected of being present at the MRS.	10
Evidence of no CWM	◆ Following investigation, the physical evidence indicates that CWM are not present at the MRS, or the historical evidence indicates that CWM are not present at the MRS.	0
CWM CONFIGURATION	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 30).	0

DIRECTIONS: Document any MRS-specific data used in selecting the ***CWM Configuration*** classifications in the space provided.

Anecdotal evidence suggested that a burial of dilute agent CAIS kits (Section 4.8.5.1; Malcolm Pirnie, 2007) may have taken place on this site; this type of CAIS is considered HTW not CWM. Additionally, a Probability Assessment also indicated that the probability of encountering CWM during subsequent actions or operations at FTSW is Unlikely (Section 8; USACE, 2010). There is no historical or current evidence of CWM existing on this MRS.

Tables 12-19
CHE Module

Because there is no historical or current evidence that CWM exists on this MRS, Tables 12-19 have been omitted according to Active Army Guidance (U.S. Army, 2009).

Table 20
Determining the CHE Module Rating

DIRECTIONS:

1. From Tables 11–19, record the data element scores in the **Score** boxes to the right.
2. Add the **Score** boxes for each of the three factors and record this number in the **Value** boxes to the right.
3. Add the three **Value** boxes and record this number in the **CHE Module Total** box below.
4. Circle the appropriate range for the **CHE Module Total** below.
5. Circle the **CHE Module Rating** that corresponds to the range selected and record this value in the **CHE Module Rating** box found at the bottom of the table.

Note:
An alternative module rating may be assigned when a module letter rating is inappropriate. An alternative module rating is used when more information is needed to score one or more data elements, contamination at an MRS was previously addressed, or there is no reason to suspect contamination was ever present at an MRS.

Table 21

HHE Module: Groundwater Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's groundwater and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional groundwater contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard present in the groundwater, select the box at the bottom of the table.

Contaminant	Maximum Concentration (µg/L)	Comparison Value (µg/L)	Ratios
No groundwater samples collected.			

CHF Scale	CHF Value	Sum The Ratios
CHF > 100	H (High)	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$
100 > CHF > 2	M (Medium)	
2 > CHF	L (Low)	

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).	

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the groundwater migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the groundwater is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in groundwater has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the groundwater to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L
MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the groundwater receptors at the MRS.

Classification	Description	Value
Identified	There is a threatened water supply well downgradient of the source and the groundwater is a current source of drinking water or source of water for other beneficial uses such as irrigation/agriculture (equivalent to Class I or IIA aquifer).	H
Potential	There is no threatened water supply well downgradient of the source and the groundwater is currently or potentially usable for drinking water, irrigation, or agriculture (equivalent to Class I, IIA, or IIB aquifer).	M
Limited	There is no potentially threatened water supply well downgradient of the source and the groundwater is not considered a potential source of drinking water and is of limited beneficial use (equivalent to Class IIIA or IIIB aquifer, or where perched aquifer exists only).	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

No Known or Suspected Groundwater MC Hazard ☑

Table 22

HHE Module: Surface Water – Human Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's surface water and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional surface water contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with human endpoints present in the surface water, select the box at the bottom of the table.

Contaminant	Maximum Concentration (µg/L)	Comparison Value (µg/L)	Ratios
No surface water samples collected.			
CHF Scale	**CHF Value**	**Sum The Ratios**	
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).		

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface water migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the surface water is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in surface water has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the surface water to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L
MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface water receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to surface water to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to surface water to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to surface water to which contamination has moved or can move.	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

There were no surface water sample locations within this MRS.

No Known or Suspected Surface Water (Human Endpoint) MC Hazard ☑

Table 23

HHE Module: Sediment – Human Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's sediment and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional sediment contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with human endpoints present in the sediment, select the box at the bottom of the table.

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratios
No sediment samples collected.			

CHF Scale	CHF Value	Sum The Ratios	
CHF > 100	H (High)	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	M (Medium)		
2 > CHF	L (Low)		

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right maximum value = H).	

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the sediment is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in sediment has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the sediment to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L
MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to sediment to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to sediment to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to sediment to which contamination has moved or can move.	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

There were no sediment sample locations within this MRS.

No Known or Suspected Sediment (Human Endpoint) MC Hazard ☑

Table 24

HHE Module: Surface Water – Ecological Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's surface water and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional surface water contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with ecological endpoints present in the surface water, select the box at the bottom of the table.

Contaminant	Maximum Concentration (µg/L)	Comparison Value (µg/L)	Ratios
No surface water samples collected.			

CHF Scale	CHF Value	Sum the Ratios	
CHF > 100	H (High)	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	M (Medium)		
2 > CHF	L (Low)		

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).	

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface water migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the surface water is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in surface water has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the surface water to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L

MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

Limited	Little or no potential for receptors to have access to surface water to which contamination has moved or can move.	L

RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

There were no surface water sample locations within this MRS.

No Known or Suspected Surface Water (Ecological Endpoint) MC Hazard ☑

Table 25

HHE Module: Sediment – Ecological Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's sediment and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional sediment contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with ecological endpoints present in the sediment, select the box at the bottom of the table.

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratios
No sediment samples collected.			
CHF Scale	**CHF Value**	**Sum the Ratios**	
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).		

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the sediment is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in sediment has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the sediment to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L
MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to sediment to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to sediment to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to sediment to which contamination has moved or can move.	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

There were no sediment sample locations within this MRS.

No Known or Suspected Sediment (Ecological Endpoint) MC Hazard ☑

Table 26

HHE Module: Surface Soil Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's surface soil and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional surface soil contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard present in the surface soil, select the box at the bottom of the table.

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratio
	Concentrations of arsenic in soil samples were within background.		
CHF Scale	**CHF Value**	**Sum the Ratios**	
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).		

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface soil migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the surface soil is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in surface soil has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the surface soil to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L

Identified	Identified receptors have access to surface soil to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to surface soil to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to surface soil to which contamination has moved or can move.	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

No Known or Suspected Surface Soil MC Hazard ☑

Table 27

HHE Module: Supplemental Contaminant Hazard Factor Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Only use this table if there are more than five contaminants in any given medium present at the MRS. This is a supplemental table designed to hold information about contaminants that do not fit in the previous tables. Indicate the **media** in which these contaminants are present. Then record all **contaminants**, their **maximum concentrations** and their **comparison values** (from Appendix B of the Primer) in the table below. Calculate and record the **ratio** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** for each medium on the appropriate media-specific tables.

Note: Do not add ratios from different media.

Media	Contaminant	Maximum Concentration	Comparison Value	Ratio

Table 28

Determining the HHE Module Rating

DIRECTIONS:

1. Record the letter values (H, M, L) for the **Contaminant Hazard**, **Migration Pathway**, and **Receptor Factors** for the media (from Tables 21–26) in the corresponding boxes below.
2. Record the media's three-letter combinations in the **Three-Letter Combination** boxes below (three-letter combinations are arranged from Hs to Ms to Ls).
3. Using the **HHE Ratings** provided below, determine each media's rating (A–G) and record the letter in the corresponding **Media Rating** box below.

Media (Source)	Contaminant Hazard Factor Value	Migratory Pathway Factor Value	Receptor Factor Value		Three-Letter Combination (Hs-Ms-Ls)		Media Rating (A-G)
Groundwater (Table 21)	**-**	**-**	**-**		**-**		**-**
Surface Water/Human Endpoint (Table 22)	-	-	-		-		-
Sediment/Human Endpoint (Table 23)	-	-	-		-		-
Surface Water/Ecological Endpoint (Table 24)	-	-	-		-		-
Sediment/Ecological Endpoint (Table 25)	-	-	-		-		-
Surface Soil (Table 26)	-	-	-		-		-

DIRECTIONS (cont.):

4. Select the single highest Media Rating (A is highest; G is lowest) and enter the letter in the **HHE Module Rating** box.

Note:

An alternative module rating may be assigned when a module letter rating is inappropriate. An alternative module rating is used when more information is needed to score one or more media, contamination at an MRS was previously addressed, or there is no reason to suspect contamination was ever present at an MRS.

HHE MODULE RATING	

HHE Ratings (for reference only)

Combination	Rating
HHH	A
HHM	B
HHL	C
HMM	
HML	D

Table 29
MRS Priority

DIRECTIONS: In the chart below, circle the letter **rating** for each module recorded in Table 10 (EHE), Table 20 (CHE), and Table 28 (HHE). Circle the corresponding numerical **priority** for each module. If information to determine the module rating is not available, choose the appropriate alternative module rating. The MRS Priority is the single highest priority; record this relative priority in the **MRS Priority or Alternative MRS Rating** at the bottom of the table.

Note: An MRS assigned Priority 1 has the highest relative priority; an MRS assigned Priority 8 has the lowest relative priority. Only an MRS with CWM known or suspected to be present can be assigned Priority 1; an MRS that has CWM known or suspected to be present cannot be assigned Priority 8.

Table A

MRS Background Information

DIRECTIONS: Record the background information below for the MRS to be evaluated. Much of this information is available from Service and DoD databases. If the MRS is located on a FUDS property, the suitable FUDS property information should be substituted. In the **MRS Summary**, briefly describe the UXO, DMM, or MC that are known or suspected to be present, the exposure setting (the MRS's physical environment), any other incidental nonmunitions-related contaminants (e.g., benzene, trichloroethylene) found at the MRS, and any potentially exposed human and ecological receptors. If possible, include a map of the MRS.

Munitions Response Site Name: Anti-Aircraft Range 90-mm 2 (FTSW-002-R-01)

Component: U.S. Army

Installation/Property Name: Fort Stewart

Location (City, County, State): Fort Stewart, Liberty County, GA

Site Name/Project Name (Project No.): Fort Stewart MRSPP RFI (W912DR-09-D-0012 DO 001)

Date Information Entered/Updated: January 2013 (prepared by ERT)

Point of Contact (Name/Phone): Travis McCoun 410-962-6728

Project Phase (check only one):

❑ PA	❑SI	☑ RFI	❑ FS	❑ RD
❑ RA-C	❑ RI	❑ RA-O	❑RC	❑ LTM

Media Evaluated (check all that apply):

❑ Groundwater	☑ Sediment (human receptor)
☑ Surface soil	☑ Surface Water (ecological receptor)
☑ Sediment (ecological receptor)	☑ Surface Water (human receptor)

MRS Summary:

MRS Description: Describe the munitions-related activities that occurred at the installation, the dates of operation, and the UXO, DMM, or MC known or suspected to be present. When possible, identify munitions, CWM, and MC by type: This MRS is located within a former 90mm anti-aircraft range; five other former anti-aircraft and tank ranges overlap this MRS. This MRS is located within the safety zones of all six of the former overlapping ranges; these ranges were used from 1941 through 1964. The known munitions associated with this MRS include 40-mm and 90-mm anti-aircraft projectiles (Section 1.7, ERT, 2012). During RFI activities, three 40-mm projectiles were located in the subsurface at this MRS (Section 5.1.1, ERT, 2014).

Description of Pathways for Human and Ecological Receptors: Pathways for human receptors are incomplete for exposure to MEC in surface soil and potentially complete for construction workers in subsurface soil. Pathways for ecological receptors are incomplete for exposure to MC (Section 5.5.1, ERT, 2014).

Description of Receptors (Human and Ecological): The current human receptors of potential MEC or MC on Anti-Aircraft Range 90-mm - 2 include authorized outdoor and construction workers. Future human receptors include future residents. Ecological diversity at this MRS is low since the area is enclosed by a fence, relatively flat, and covered with maintained grass and buildings (Section 5.5.1; ERT, 2014).

Table 1

EHE Module: Munitions Type Data Element Table

DIRECTIONS: Below are 11 classifications of munitions and their descriptions. Circle the scores that correspond with **all** the munitions types known or suspected to be present at the MRS.

Note: The terms *practice munitions, small arms ammunition, physical evidence,* and *historical evidence* are defined in Appendix C of the Primer.

Classification	Description	Score
Sensitive	◆ UXO that are considered most likely to function upon any interaction with exposed persons (e.g., submunitions, 40mm high-explosive [HE] grenades, white phosphorus [WP] munitions, high-explosive antitank [HEAT] munitions, and practice munitions with sensitive fuzes, but excluding all other practice munitions). ◆ Hand grenades containing energetic filler. ◆ Bulk primary explosives, or mixtures of these with environmental media, such that the mixture poses an explosive hazard.	**30**
High explosive (used or damaged)	◆ UXO containing a high-explosive filler (e.g., RDX, Composition B), that are not considered "sensitive." ◆ DMM containing a high-explosive filler that have: ▪ Been damaged by burning or detonation ▪ Deteriorated to the point of instability.	**25**
Pyrotechnic (used or damaged)	◆ UXO containing a pyrotechnic filler other than white phosphorus (e.g., flares, signals, simulators, smoke grenades). ◆ DMM containing a pyrotechnic filler other than white phosphorus (e.g., flares, signals, simulators, smoke grenades) that have: ▪ Been damaged by burning or detonation ▪ Deteriorated to the point of instability.	20
High explosive (unused)	◆ DMM containing a high-explosive filler that: ▪ Have not been damaged by burning or detonation ▪ Are not deteriorated to the point of instability.	15
Propellant	◆ UXO containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor). ◆ DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor) that are: ▪ Damaged by burning or detonation ▪ Deteriorated to the point of instability.	15
Bulk secondary high explosives, pyrotechnics, or propellant	◆ DMM containing mostly single-, double-, or triple-based propellant, or composite propellants (e.g., a rocket motor). ◆ DMM that are bulk secondary high explosives, pyrotechnic compositions, or propellant (not contained in a munition), or mixtures of these with environmental media such that the mixture poses an explosive hazard.	10
Pyrotechnic (not used or damaged)	◆ DMM containing a pyrotechnic filler (i.e., red phosphorus), other than white phosphorus filler, that: ▪ Have not been damaged by burning or detonation ▪ Are not deteriorated to the point of instability.	10
Practice	◆ UXO that are practice munitions that are not associated with a sensitive fuze. ◆ DMM that are practice munitions that are not associated with a sensitive fuze and that have not: ▪ Been damaged by burning or detonation ▪ Deteriorated to the point of instability.	5
Riot control	◆ UXO or DMM containing a riot control agent filler (e.g., tear gas).	**3**
Small arms	◆ Used munitions or DMM that are categorized as small arms ammunition. (Physical evidence or historical evidence that no other types of munitions [e.g., grenades, subcaliber training rockets, demolition charges] were used or are present on the MRS is required for selection of this category.)	**2**
Evidence of no munitions	◆ Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	**0**
MUNITIONS TYPE	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 30).	**30**

DIRECTIONS: Document any MRS-specific data used in selecting the ***Munitions Type*** classifications in the space provided.

Site was chosen as sensitive, because according to information obtained during the Phase 3 site visit and HRR, 90-mm anti-tank HE, 40-mm anti-aircraft HE, and small arms were used at the site. Numerous EOD calls involving C-4 plastic explosives (secondary explosives), M-222 Dragon high explosive anti-tank guided missile, M-7 grenades (riot control agent), and MK-2 fragmentation hand grenades were reported on this site. (Section 4.2.1; Malcolm Pirnie, 2007). These EOD calls may be related to the use of the site as an active ammunition supply point, rather than from the historical ranges.

During RFI activities, three 40-mm projectiles were located in the subsurface at this MRS (Section 5.1.1; ERT, 2014).

Table 2

EHE Module: Source of Hazard Data Element Table

DIRECTIONS: Below are 11 classifications describing sources of explosive hazards. Circle the scores that correspond with **all** the sources of explosive hazards known or suspected to be present at the MRS.

Note: The terms *former range, practice munitions, small arms range, physical evidence,* and *historical evidence* are defined in Appendix C of the Primer.

Classification	Description	Score
Former range	◆ The MRS is a former military range where munitions (including practice munitions with sensitive fuzes) have been used. Such areas include impact or target areas and associated buffer and safety zones.	**10**
Former munitions treatment (i.e., OB/OD) unit	◆ The MRS is a location where UXO or DMM (e.g., munitions, bulk explosives, bulk pyrotechnic, or bulk propellants) were burned or detonated for the purpose of treatment prior to disposal.	8
Former practice munitions range	◆ The MRS is a former military range on which only practice munitions without sensitive fuzes were used.	6
Former maneuver area	◆ The MRS is a former maneuver area where no munitions other than flares, simulators, smokes, and blanks were used. There must be evidence that no other munitions were used at the location to place an MRS into this category.	5
Former burial pit or other disposal area	◆ The MRS is a location where DMM were buried or disposed of (e.g., disposed of into a water body) without prior thermal treatment.	5
Former industrial operating facilities	◆ The MRS is a location that is a former munitions maintenance, manufacturing, or demilitarization facility.	4
Former firing points	◆ The MRS is a firing point, where the firing point is delineated as an MRS separate from the rest of a former military range.	4
Former missile or air defense artillery emplacements	◆ The MRS is a former missile defense or air defense artillery (ADA) emplacement not associated with a military range.	2
Former storage or transfer points	◆ The MRS is a location where munitions were stored or handled for transfer between different modes of transportation (e.g., rail to truck, truck to weapon system).	2
Former small arms range	◆ The MRS is a former military range where only small arms ammunition was used. (There must be evidence that no other types of munitions [e.g., grenades] were used or are present to place an MRS into this category.)	1
Evidence of no munitions	◆ Following investigation of the MRS, there is physical evidence that no UXO or DMM are present, or there is historical evidence indicating that no UXO or DMM are present.	0
SOURCE OF HAZARD	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 10).	**10**

DIRECTIONS: Document any MRS-specific data used in selecting the ***Source of Hazard*** classifications in the space provided.

Former range was chosen, because the 77 acre MRS area is comprised of the following overlapping range fans: the buffer area (near the firing point) of an Anti-Tank Range 90-mm (total acreage approximately 16,128, operational in 1941); the buffer area (near the firing point) of an Anti-Aircraft Range 40-mm (total acreage approximately 25,288, operational in 1941); and a portion of a Small Arms Range (total acreage approximately 1,241, operational in 1941). (Section 4.2.1; Malcolm Pirnie, 2007). The safety zones of three additional anti-aircraft ranges also overlap this MRS. The MRS is currently an active ammunition supply point (Section 1.5.2 ERT, 2014).

Table 3

EHE Module: Location of Munitions Data Element Table

DIRECTIONS: Below are eight classifications of munitions locations and their descriptions. Circle the scores that correspond with **all** the locations where munitions are known or suspected to be present at the MRS.

Note: The terms *confirmed, surface, subsurface, small arms ammunition, physical evidence,* and *historical evidence* are defined in Appendix C of the Primer.

Classification	Description	Score
Confirmed surface	◆ Physical evidence indicates that there are UXO or DMM on the surface of the MRS. ◆ Historical evidence (i.e., a confirmed report such as an explosive ordnance disposal [EOD], police, or fire department report that an incident or accident that involved UXO or DMM occurred) indicates there are UXO or DMM on the surface of the MRS.	**25**
Confirmed subsurface, active	◆ Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS, and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM. ◆ Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena (e.g., drought, flooding, erosion, frost heave, tidal action), or intrusive activities (e.g., plowing, construction, dredging) at the MRS are likely to expose UXO or DMM.	20
Confirmed subsurface, stable	◆ Physical evidence indicates the presence of UXO or DMM in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed. ◆ Historical evidence indicates that UXO or DMM are located in the subsurface of the MRS and the geological conditions at the MRS are not likely to cause UXO or DMM to be exposed, in the future, by naturally occurring phenomena, or intrusive activities at the MRS are not likely to cause UXO or DMM to be exposed.	**20**
Suspected (physical evidence)	◆ There is physical evidence (e.g., munitions debris such as fragments, penetrators, projectiles, shell casings, links, fins), other than the documented presence of UXO or DMM, indicating that UXO or DMM may be present at the MRS.	10
Suspected (historical evidence)	◆ There is historical evidence indicating that UXO or DMM may be present at the MRS.	**5**
Subsurface, physical constraint	◆ There is physical or historical evidence indicating that UXO or DMM may be present in the subsurface, but there is a physical constraint (e.g., pavement, water depth over 120 feet) preventing direct access to the UXO or DMM.	2
Small arms (regardless of location)	◆ The presence of small arms ammunition is confirmed or suspected, regardless of other factors such as geological stability. (There must be evidence that no other types of munitions [e.g., grenades] were used or are present at the MRS to place an MRS into this category.)	1
Evidence of no munitions	◆ Following investigation of the MRS, there is physical evidence that there are no UXO or DMM present, or there is historical evidence indicating that no UXO or DMM are present.	0
LOCATION OF MUNITIONS	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 25).	**25**

DIRECTIONS: Document any MRS-specific data used in selecting the ***Location of Munitions*** classifications in the space provided.

Confirmed surface was chosen, because numerous EOD calls involving C-4 plastic explosives (secondary explosives), M-222 Dragon high explosive anti-tank guided missile, M-7 grenades (riot control agent), and MK-2 fragmentation hand grenades were reported on this site. (Section 4.2.1; Malcolm Pirnie, 2007).

During RFI activities, three 40-mm projectiles were located in the subsurface at this MRS (Section 5.1.1; ERT, 2014).

Table 4

EHE Module: Ease of Access Data Element Table

DIRECTIONS: Below are four classifications of barrier types that can surround an MRS and their descriptions. The barrier type is directly related to the ease of public access to the MRS. Circle the score that corresponds with the ease of access to the MRS.

Note: The term *barrier* is defined in Appendix C of the Primer.

Classification	Description	Score
No barrier	◆ There is no barrier preventing access to any part of the MRS (i.e., all parts of the MRS are accessible).	10
Barrier to MRS access is incomplete	◆ There is a barrier preventing access to parts of the MRS, but not the entire MRS.	8
Barrier to MRS access is complete but not monitored	◆ There is a barrier preventing access to all parts of the MRS, but there is no surveillance (e.g., by a guard) to ensure that the barrier is effectively preventing access to all parts of the MRS.	5
Barrier to MRS access is complete and monitored	◆ There is a barrier preventing access to all parts of the MRS, and there is active, continual surveillance (e.g., by a guard, video monitoring) to ensure that the barrier is effectively preventing access to all parts of the MRS.	**0**
EASE OF ACCESS	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 10).	**0**

DIRECTIONS: Document any MRS-specific data used in selecting the ***Ease of Access*** classification in the space provided.

This MRS is protected by fences and guards because it is currently an active ammunition supply point (Section 1.7; ERT, 2012).

Table 5

EHE Module: Status of Property Data Element Table

DIRECTIONS: Below are three classifications of the status of a property within the Department of Defense (DoD) and their descriptions. Circle the score that corresponds with the status of property at the MRS.

Classification	Description	Score
Non-DoD control	◆ The MRS is at a location that is no longer owned by, leased to, or otherwise possessed or used by DoD. Examples are privately owned land or water bodies; land or water bodies owned or controlled by state, tribal, or local governments; and land or water bodies managed by other federal agencies. ◆ The MRS is at a location that is owned by DoD, but that DoD has leased to another entity and for which DoD does not control access 24 hours per day.	5
Scheduled for transfer from DoD control	◆ The MRS is on land or is a water body that is owned, leased, or otherwise possessed by DoD, and DoD plans to transfer that land or water body to the control of another entity (e.g., a state, tribal, or local government; a private party; another federal agency) within 3 years from the date the Protocol is applied.	3
DoD control	◆ The MRS is on land or is a water body that is owned, leased, or otherwise possessed by DoD. With respect to property that is leased or otherwise possessed, DoD must control access to the MRS 24 hours per day, every day of the calendar year.	**0**
STATUS OF PROPERTY	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 5).	**0**

DIRECTIONS: Document any MRS-specific data used in selecting the ***Status of Property*** classification in the space provided.

This MRS is located on Fort Stewart property and is owned by the DoD (Section 1.1; ERT, 2012).

Table 6

EHE Module: Population Density Data Element Table

DIRECTIONS: Below are three classifications for population density and their descriptions. Determine the population density per square mile that most closely corresponds with the population of the MRS, including the area within a two-mile radius of the MRS's perimeter. Circle the most appropriate score.

Note: Use the U.S. Census Bureau tract data available to capture the **highest** population density within a two-mile radius of the perimeter of the MRS.

Classification	Description	Score
> 500 persons per square mile	◆ There are more than 500 persons per square mile in the U.S. Census Bureau tract in which the MRS is located.	5
100–500 persons per square mile	◆ There are 100 to 500 persons per square mile in the U.S. Census Bureau tract in which the MRS is located.	3
< 100 persons per square mile	◆ There are fewer than 100 persons per square mile in the U.S. Census Bureau tract in which the MRS is located.	1
POPULATION DENSITY	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 5).	3

DIRECTIONS: Document any MRS-specific data used in selecting the ***Population Density*** classification in the space provided.

According to the 2010 Census, there are 257.05 people per square mile within the FTSW Census Tract (http://www.usa.com/GA179010103.html).

Table 7

EHE Module: Population Near Hazard Data Element Table

DIRECTIONS: Below are six classifications describing the number of inhabited structures near the MRS. The number of inhabited buildings relates to the potential population near the MRS. Determine the number of inhabited structures within two miles of the MRS boundary and circle the score that corresponds with the number of inhabited structures.

Note: The term *inhabited structures* is defined in Appendix C of the Primer.

Classification	Description	Score
26 or more inhabited structures	◆ There are 26 or more inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	5
16 to 25 inhabited structures	◆ There are 16 to 25 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	4
11 to 15 inhabited structures	◆ There are 11 to 15 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	3
6 to 10 inhabited structures	◆ There are 6 to 10 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	2
1 to 5 inhabited structures	◆ There are 1 to 5 inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	1
0 inhabited structures	◆ There are no inhabited structures located up to 2 miles from the boundary of the MRS, within the boundary of the MRS, or both.	0
POPULATION NEAR HAZARD	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 5).	1

DIRECTIONS: Document any MRS-specific data used in selecting the ***Population Near Hazard*** classification in the space provided.

An office for the ASP is located within two miles of the boundary of the MRS (Section 4.2.4.3.1; Malcolm Pirnie, 2007). There is an active ammunition supply point within this MRS (Section 1.7; ERT, 2012).

Table 8

EHE Module: Types of Activities/Structures Data Element Table

DIRECTIONS: Below are five classifications of activities and/or inhabited structures and their descriptions. Review the types of activities that occur and/or structures that are present within two miles of the MRS and circle the scores that correspond with **all** the activities/structure classifications at the MRS.

Note: The term *inhabited structure* is defined in Appendix C of the Primer.

Classification	Description	Score
Residential, educational, commercial, or subsistence	◆ Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with any of the following purposes: residential, educational, child care, critical assets (e.g., hospitals, fire and rescue, police stations, dams), hotels, commercial, shopping centers, playgrounds, community gathering areas, religious sites, or sites used for subsistence hunting, fishing, and gathering.	5
Parks and recreational areas	◆ Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with parks, nature preserves, or other recreational uses.	4
Agricultural, forestry	◆ Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with agriculture or forestry.	3
Industrial or warehousing	◆ Activities are conducted, or inhabited structures are located up to two miles from the MRS's boundary or within the MRS's boundary, that are associated with industrial activities or warehousing.	2
No known or recurring activities	◆ There are no known or recurring activities occurring up to two miles from the MRS's boundary or within the MRS's boundary.	1
TYPES OF ACTIVITIES/STRUCTURES	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 5).	2

DIRECTIONS: Document any MRS-specific data used in selecting the ***Types of Activities/Structures*** classifications in the space provided.

An office for the ASP is located within 2 miles of the MRS (Section 4.2.4.3.1; Malcolm Pirnie, 2007). There is an active ammunition supply point within this MRS (Section 1.7; ERT, 2012); training ranges and construction borrow-pit areas are located within 2 miles of the MRS boundary.

Table 9

EHE Module: Ecological and/or Cultural Resources Data Element Table

DIRECTIONS: Below are four classifications of ecological and/or cultural resources and their descriptions. Review the types of resources present and circle the score that corresponds with the ecological and/or cultural resources present on the MRS.

Note: The terms *ecological resources* and *cultural resources* are defined in Appendix C of the Primer.

Classification	Description	Score
Ecological and cultural resources present	◆ There are both ecological and cultural resources present on the MRS.	5
Ecological resources present	◆ There are ecological resources present on the MRS.	3
Cultural resources present	◆ There are cultural resources present on the MRS.	3
No ecological or cultural resources present	◆ There are no ecological resources or cultural resources present on the MRS.	**0**
ECOLOGICAL AND/OR CULTURAL RESOURCES	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 5).	**0**

DIRECTIONS: Document any MRS-specific data used in selecting the ***Ecological and/or Cultural Resources*** classification in the space provided.

The MRS is heavily developed and contains no ecological resources. There are no known cultural resources (Malcolm Pirnie, 2007) (Section 5.5.1; ERT, 2014).

Table 10
Determining the EHE Module Rating

DIRECTIONS:

1. From Tables 1–9, record the data element scores in the **Score** boxes to the right.
2. Add the **Score** boxes for each of the three factors and record this number in the **Value** boxes to the right.
3. Add the three **Value** boxes and record this number in the **EHE Module Total** box below.
4. Circle the appropriate range for the **EHE Module Total** below.
5. Circle the **EHE Module Rating** that corresponds to the range selected and record this value in the **EHE Module Rating** box found at the bottom of the table.

Note:
An alternative module rating may be assigned when a module letter rating is inappropriate. An alternative module rating is used when more information is needed to score one or more data elements, contamination at an MRS was previously addressed, or there is no reason to suspect contamination was ever present at an MRS.

Table 11

CHE Module: CWM Configuration Data Element Table

DIRECTIONS: Below are seven classifications of CWM configuration and their descriptions. Circle the scores that correspond with **all** the CWM configurations known or suspected to be present at the MRS.

Note: The terms *CWM/UXO, CWM/DMM, physical evidence,* and *historical evidence* are defined in Appendix C of the Primer.

Classification	Description	Score
CWM, that are either UXO, or explosively configured damaged DMM	The CWM known or suspected of being present at the MRS are: ◆ CWM that are UXO (i.e., CWM/UXO) ◆ Explosively configured CWM that are DMM (i.e., CWM/DMM) that have been damaged.	30
CWM mixed with UXO	◆ The CWM known or suspected of being present at the MRS are undamaged CWM/DMM or CWM not configured as a munition that are commingled with conventional munitions that are UXO.	25
CWM, explosive configuration that are undamaged DMM	◆ The CWM known or suspected of being present at the MRS are explosively configured CWM/DMM that have not been damaged.	20
CWM/DMM, not explosively configured or CWM, bulk container	The CWM known or suspected of being present at the MRS are: ◆ Nonexplosively configured CWM/DMM either damaged or undamaged ◆ Bulk CWM (e.g. ton container).	15
CAIS K941 and CAIS K942	◆ The CWM/DMM known or suspected of being present at the MRS are CAIS K941-toxic gas set M-1 or CAIS K942-toxic gas set M-2/E11.	12
CAIS (chemical agent identification sets)	◆ CAIS, other than CAIS K941 and K942, are known or suspected of being present at the MRS.	10
Evidence of no CWM	◆ Following investigation, the physical evidence indicates that CWM are not present at the MRS, or the historical evidence indicates that CWM are not present at the MRS.	0
CWM CONFIGURATION	**DIRECTIONS:** Record **the single highest score** from above in the box to the right (maximum score = 30).	0

DIRECTIONS: Document any MRS-specific data used in selecting the ***CWM Configuration*** classifications in the space provided.

There is no historical or current evidence of CWM existing on this MRS.

Tables 12-19
CHE Module

Because there is no historical or current evidence that CWM exists on this MRS, Tables 12-19 have been omitted according to Active Army Guidance (U.S. Army, 2009).

Table 20
Determining the CHE Module Rating

DIRECTIONS:

1. From Tables 11–19, record the data element scores in the **Score** boxes to the right.
2. Add the **Score** boxes for each of the three factors and record this number in the **Value** boxes to the right.
3. Add the three **Value** boxes and record this number in the **CHE Module Total** box below.
4. Circle the appropriate range for the **CHE Module Total** below.
5. Circle the **CHE Module Rating** that corresponds to the range selected and record this value in the **CHE Module Rating** box found at the bottom of the table.

Note:
An alternative module rating may be assigned when a module letter rating is inappropriate. An alternative module rating is used when more information is needed to score one or more data elements, contamination at an MRS was previously addressed, or there is no reason to suspect contamination was ever present at an MRS.

Table 21

HHE Module: Groundwater Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's groundwater and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional groundwater contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard present in the groundwater, select the box at the bottom of the table.

Contaminant	Maximum Concentration (µg/L)	Comparison Value (µg/L)	Ratios
No groundwater samples were collected in the MRS (Section 6.2.1.3; ERT, 2014).			

CHF Scale	CHF Value	Sum The Ratios
CHF > 100	H (High)	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$
100 > CHF > 2	M (Medium)	
2 > CHF	L (Low)	

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).	

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the groundwater migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the groundwater is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in groundwater has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the groundwater to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L
MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the groundwater receptors at the MRS.

Classification	Description	Value
Identified	There is a threatened water supply well down gradient of the source and the groundwater is a current source of drinking water or source of water for other beneficial uses such as irrigation/agriculture (equivalent to Class I or IIA aquifer).	H
Potential	There is no threatened water supply well down gradient of the source and the groundwater is currently or potentially usable for drinking water, irrigation, or agriculture (equivalent to Class I, IIA, or IIB aquifer).	M
Limited	There is no potentially threatened water supply well down gradient of the source and the groundwater is not considered a potential source of drinking water and is of limited beneficial use (equivalent to Class IIIA or IIIB aquifer, or where perched aquifer exists only).	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

No Known or Suspected Groundwater MC Hazard ☐

Table 22

HHE Module: Surface Water – Human Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's surface water and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional surface water contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with human endpoints present in the surface water, select the box at the bottom of the table.

Contaminant	Maximum Concentration (µg/L)	Comparison Value (µg/L)	Ratios
Aluminum	2300	3.6E+04	0.0639
Copper	5.4	1.5E+03	0.0036
Lead	2.5	1.5E+01	0.1667
Zinc	75	1.1E+04	0.0068
CHF Scale	**CHF Value**	**Sum The Ratios**	**0.241**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).	**L**

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface water migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the surface water is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in surface water has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the surface water to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	**L**

MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	**L**

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface water receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to surface water to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to surface water to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to surface water to which contamination has moved or can move.	**L**

RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	**L**

Notes: Sample taken from a shallow ditch with very little flow within the gated, locked, and patrolled MRS area. No known background values are available for surface water for comparison purposes.

No Known or Suspected Surface Water (Human Endpoint) MC Hazard ☐

Table 23

HHE Module: Sediment – Human Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's sediment and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional sediment contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with human endpoints present in the sediment, select the box at the bottom of the table.

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratios
	Concentrations of select metals in sediment samples were below background (Section 5.3.2; ERT, 2014).		

CHF Scale	CHF Value	Sum The Ratios
CHF > 100	H (High)	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$
100 > CHF > 2	M (Medium)	
2 > CHF	L (Low)	

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right maximum value = H).	

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the sediment is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in sediment has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the sediment to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L

MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to sediment to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to sediment to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to sediment to which contamination has moved or can move.	L

RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Notes: Samples taken from a shallow ditch with very little flow within the gated, locked, and patrolled MRS area.

No Known or Suspected Sediment (Human Endpoint) MC Hazard ☑

Table 24

HHE Module: Surface Water – Ecological Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's surface water and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional surface water contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with ecological endpoints present in the surface water, select the box at the bottom of the table.

Contaminant	Maximum Concentration (µg/L)	Comparison Value (µg/L)	Ratios
Aluminum	2300	8.7E+01	26.4
Copper	5.4	9.0E+00	0.6
Lead	2.5	2.5E+00	1.0
Zinc	75	1.2E+02	0.625
CHF Scale	**CHF Value**	**Sum the Ratios**	**28.625**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).	**M**

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface water migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the surface water is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in surface water has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the surface water to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L

MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	**L**

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface water receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to surface water to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to surface water to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to surface water to which contamination has moved or can move.	L

RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	**L**

Notes: Sample taken from a shallow ditch with very little flow within the gated, locked, and patrolled MRS area. No known background values are available for surface water for comparison purposes.

No Known or Suspected Surface Water (Ecological Endpoint) MC Hazard ☐

Table 25

HHE Module: Sediment – Ecological Endpoint Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's sediment and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional sediment contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard with ecological endpoints present in the sediment, select the box at the bottom of the table.

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratios
	Concentrations of select metals in sediment samples were below background (Section 5.3.2; ERT, 2014).		

CHF Scale	CHF Value	Sum the Ratios
CHF > 100	H (High)	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$
100 > CHF > 2	M (Medium)	
2 > CHF	L (Low)	

CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).	

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the sediment is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in sediment has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the sediment to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L
MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the sediment receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to sediment to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to sediment to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to sediment to which contamination has moved or can move.	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	

Sample taken from a shallow ditch with very little flow within the gated, locked, and patrolled MRS area.

No Known or Suspected Sediment (Ecological Endpoint) MC Hazard ☑

Table 26

HHE Module: Surface Soil Data Element Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Record the **maximum concentrations** of all contaminants in the MRS's surface soil and their **comparison values** (from Appendix B of the Primer) in the table below. Additional contaminants can be recorded on Table 27. Calculate and record the **ratios** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** by adding the contaminant **ratios** together, including any additional surface soil contaminants recorded on Table 27. Based on the **CHF**, use the **CHF Scale** to determine and record the **CHF Value**. If there is no known or suspected MC hazard present in the surface soil, select the box at the bottom of the table.

Contaminant	Maximum Concentration (mg/kg)	Comparison Value (mg/kg)	Ratio
Aluminum	7060	7.6E+04	0.0929
Copper	4.6	3.1E+03	0.0015
Lead	7.8	4.0E+02	0.0195
Zinc	11.6	2.3E+04	0.0005
CHF Scale	**CHF Value**	**Sum the Ratios**	**0.1144**
CHF > 100	**H (High)**	$CHF = \sum \frac{\text{[Maximum Concentration of Contaminant]}}{\text{[Comparison Value for Contaminant]}}$	
100 > CHF > 2	**M (Medium)**		
2 > CHF	**L (Low)**		
CONTAMINANT HAZARD FACTOR	**DIRECTIONS:** Record **the CHF Value** from above in the box to the right (maximum value = H).		**L**

Migratory Pathway Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface soil migratory pathway at the MRS.

Classification	Description	Value
Evident	Analytical data or observable evidence indicates that contamination in the surface soil is present at, moving toward, or has moved to a point of exposure.	H
Potential	Contamination in surface soil has moved only slightly beyond the source (i.e., tens of feet), could move but is not moving appreciably, or information is not sufficient to make a determination of Evident or Confined.	M
Confined	Information indicates a low potential for contaminant migration from the source via the surface soil to a potential point of exposure (possibly due to the presence of geological structures or physical controls).	L
MIGRATORY PATHWAY FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	**L**

Receptor Factor

DIRECTIONS: Circle the value that corresponds most closely to the surface soil receptors at the MRS.

Classification	Description	Value
Identified	Identified receptors have access to surface soil to which contamination has moved or can move.	H
Potential	Potential for receptors to have access to surface soil to which contamination has moved or can move.	M
Limited	Little or no potential for receptors to have access to surface soil to which contamination has moved or can move.	L
RECEPTOR FACTOR	**DIRECTIONS:** Record **the single highest value** from above in the box to the right (maximum value = H).	**L**

No Known or Suspected Surface Soil MC Hazard ☐

Table 27

HHE Module: Supplemental Contaminant Hazard Factor Table

Contaminant Hazard Factor (CHF)

DIRECTIONS: Only use this table if there are more than five contaminants in any given medium present at the MRS. This is a supplemental table designed to hold information about contaminants that do not fit in the previous tables. Indicate the **media** in which these contaminants are present. Then record all **contaminants**, their **maximum concentrations** and their **comparison values** (from Appendix B of the Primer) in the table below. Calculate and record the **ratio** for each contaminant by dividing the **maximum concentration** by the **comparison value**. Determine the **CHF** for each medium on the appropriate media-specific tables.

Note: Do not add ratios from different media.

Media	Contaminant	Maximum Concentration	Comparison Value	Ratio

Table 28

Determining the HHE Module Rating

DIRECTIONS:

1. Record the letter values (H, M, L) for the **Contaminant Hazard**, **Migration Pathway**, and **Receptor Factors** for the media (from Tables 21–26) in the corresponding boxes below.
2. Record the media's three-letter combinations in the **Three-Letter Combination** boxes below (three-letter combinations are arranged from Hs to Ms to Ls).
3. Using the **HHE Ratings** provided below, determine each media's rating (A–G) and record the letter in the corresponding **Media Rating** box below.

Media (Source)	Contaminant Hazard Factor Value	Migratory Pathway Factor Value	Receptor Factor Value		Three-Letter Combination (Hs-Ms-Ls)		Media Rating (A-G)
Groundwater (Table 21)	**-**	**-**	**-**		**-**		**-**
Surface Water/Human Endpoint (Table 22)	L	L	L		LLL		G
Sediment/Human Endpoint (Table 23)	-	-	-		-		-
Surface Water/Ecological Endpoint (Table 24)	M	L	L		MLL		F
Sediment/Ecological Endpoint (Table 25)	-	-	-		-		-
Surface Soil (Table 26)	L	L	L		LLL		G

DIRECTIONS (cont.):

4. Select the single highest Media Rating (A is highest; G is lowest) and enter the letter in the **HHE Module Rating** box.

Note:

An alternative module rating may be assigned when a module letter rating is inappropriate. An alternative module rating is used when more information is needed to score one or more media, contamination at an MRS was previously addressed, or there is no reason to suspect contamination was ever present at an MRS.

HHE MODULE RATING	**F**

HHE Ratings (for reference only)

Combination	Rating
HHH	A
HHM	B
HHL	C
HMM	
HML	D
MMM	
HLL	E
MML	
MLL	F
LLL	G

Alternative Module Ratings	Evaluation Pending
	No Longer Required
	No Known or Suspected MC Hazard
HHE Module Rating	**No Known or Suspected MC Hazard**

Table 29
MRS Priority

DIRECTIONS: In the chart below, circle the letter **rating** for each module recorded in Table 10 (EHE), Table 20 (CHE), and Table 28 (HHE). Circle the corresponding numerical **priority** for each module. If information to determine the module rating is not available, choose the appropriate alternative module rating. The MRS Priority is the single highest priority; record this relative priority in the **MRS Priority or Alternative MRS Rating** at the bottom of the table.

Note: An MRS assigned Priority 1 has the highest relative priority; an MRS assigned Priority 8 has the lowest relative priority. Only an MRS with CWM known or suspected to be present can be assigned Priority 1; an MRS that has CWM known or suspected to be present cannot be assigned Priority 8.

EHE Rating	Priority	CHE Rating	Priority	HHE Rating	Priority
		A	1

MEC HA Summary Information

Comments

Site ID: Ft. Stewart AAR
Date: 3/25/2013

Please identify the single specific area to be assessed in this hazard assessment. From this point forward, all references to "site" or "MRS" refer to the specific area that you have defined.

A. Enter a unique identifier for the site:

Anti-Aircraft Range 90-mm - 2 MRS (FTSW-002-R-01)

Provide a list of information sources used for this hazard assessment. As you are completing the worksheets, use the "Select Ref(s)" buttons at the ends of each subsection to select the applicable information sources from the list below.

Ref. No.	Title (include version, publication date)
1	USACE, 2006a. St. Louis District. Range Operations Repo
2	USACE, 2006b. St. Louis District. Range Operations Repo

B. Briefly describe the site:

1. Area (include units): 77 acres
2. Past munitions-related use:

Safety Buffer Areas

3. Current land-use activities (list all that occur):

Ammunition Supply Point

4. Are changes to the future land-use planned? No
5. What is the basis for the site boundaries?

Previous investigations have delineated the six historical anti-aircraft and tank ranges that overlap this MRS. This MRS is positioned downrange of these ranges and does not overlap impact/target areas or firing points.

6. How certain are the site boundaries?

Boundaries are certain based on past and most recent investigations.

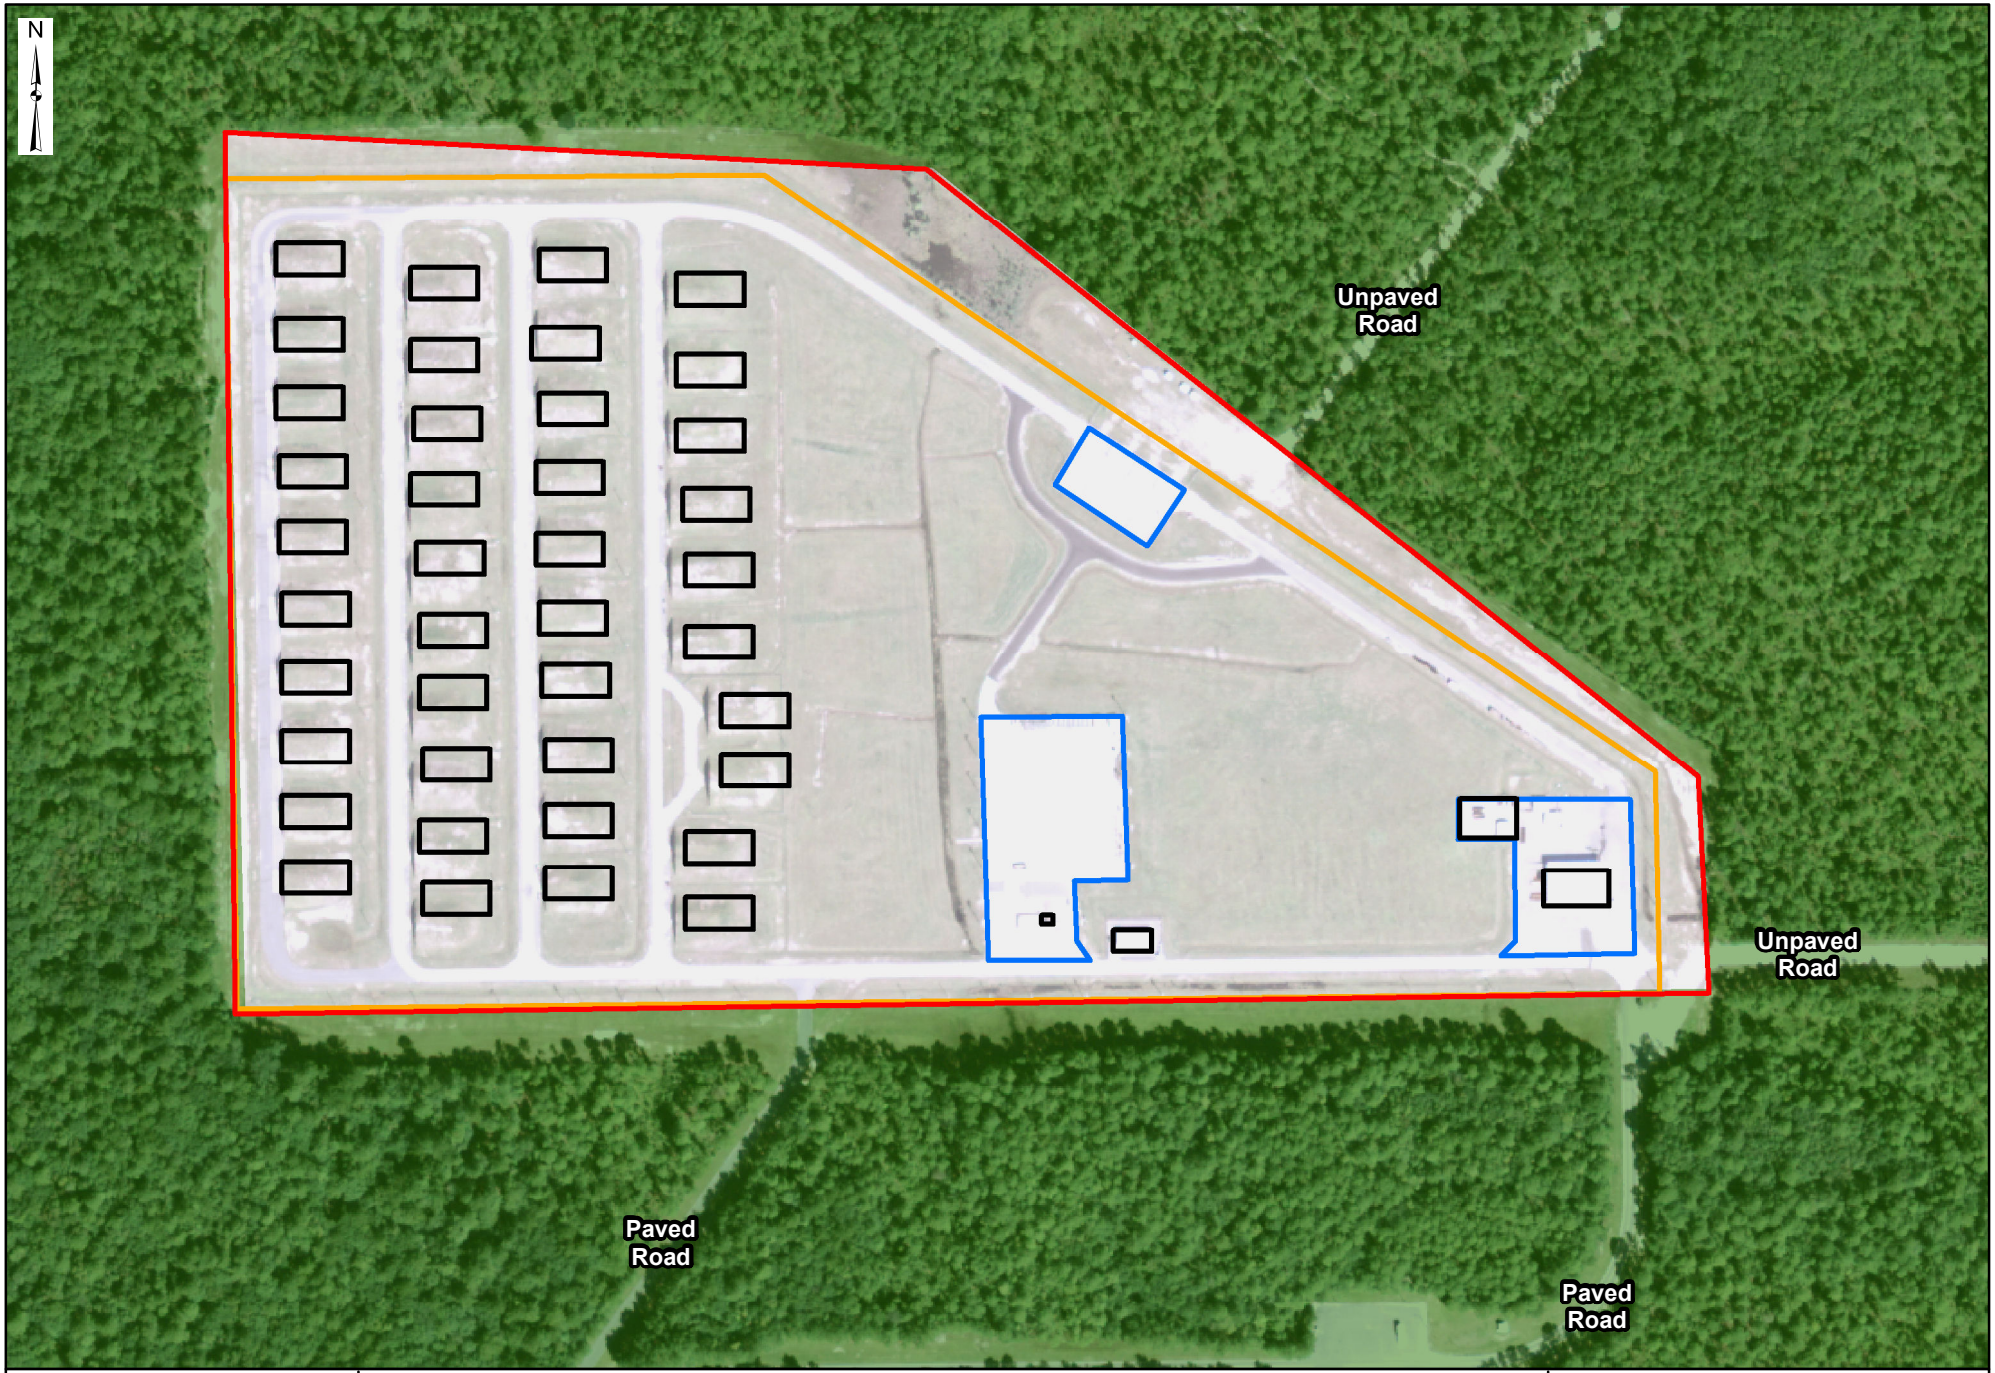
Malcolm Pirnie, 2006. Baltimore District. Final Historical Records Review Fort Stewart, Fort Stewart, Georgia. September.
Malcolm Pirnie, 2007. Baltimore District. Final Confirmatory Sampling Report. Fort Stewart, Georgia. November.

C. Historical Clearances

1. Have there been any historical clearances at the site? No, none
2. If a clearance occurred:
   a. What year was the clearance performed? 2012
   b. Provide a description of the clearance activity (e.g., extent, depth, amount of munitions-related items removed, types and sizes of removed items, and whether metal detectors were used):



Three 40-mm projectiles were removed from the subsurface during RFI activities. DGM surveying was conducted using EM61-MK2

Energetic Material Type Input Factor Categories

The following table is used to determine scores associated with the energetic materials. Materials are listed in order from most hazardous to least hazardous.

	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
High Explosive and Low Explosive Filler in Fragmenting Rounds	100	100	100
White Phosphorus	70	70	70
Pyrotechnic	60	60	60
Propellant	50	50	50
Spotting Charge	40	40	40
Incendiary	30	30	30

The most hazardous type of energetic material listed in the 'Munitions, Bulk Explosive Info' Worksheet falls under the category 'High Explosive and Low Explosive Filler in Fragmenting Rounds'.

Score

Baseline Conditions: **100**
Surface Cleanup: **100**
Subsurface Cleanup: **100**

Location of Additional Human Receptors Input Factor Categories

1. What is the Explosive Safety Quantity Distance (ESQD) from the Explosive Siting Plan or the Explosive Safety Submission for the MRS? 275 feet
2. Are there currently any features or facilities where people may congregate within the MRS, or within the ESQD arc? Yes
3. Please describe the facility or feature.

Ammunition Supply Point

MEC Item(s) used to calculate the ESQD for current use activities

Item #3. Artillery (90mm, High Explosive)

The following table is used to determine scores associated with the location of additional human receptors (current use activities):

	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
Inside the MRS or inside the ESQD arc	30	30	30
Outside of the ESQD arc	0	0	0

4. Current use activities are 'Inside the MRS or inside the ESQD arc', based on Question 2.' ***Score***

Baseline Conditions: **30**
Surface Cleanup: **30**
Subsurface Cleanup: **30**

5. Are there future plans to locate or construct features or facilities where people may congregate within the MRS, or within the ESQD arc?
6. Please describe the facility or feature.

MEC Item(s) used to calculate the ESQD for future use activities

The following table is used to determine scores associated with the location of additional human receptors (future use activities):

	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
Inside the MRS or inside the ESQD arc	30	30	30
Outside of the ESQD arc	0	0	0

7. Please answer Question 5 above to determine the scores. ***Score***

Potential Contact Hours Input Factor Categories

The following table is used to determine scores associated with the total potential contact time:

	Description	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
Many Hours	≥1,000,000 receptor-hrs/yr	120	90	30
Some Hours	100,000 to 999,999 receptor hrs/yr	70	50	20
Few Hours	10,000 to 99,999 receptor-hrs/yr	40	20	10
Very Few Hours	<10,000 receptor-hrs/yr	15	10	5

Current Use Activities:

Input factors are only determined for baseline conditions for current use activities. Based on the 'Current and Future Activities' Worksheet, the Total Potential Contact Time is: **69,520** receptor hrs/yr
Based on the table above, this corresponds to a input factor score for baseline conditions of: **40** Score

Future Use Activities:

Input factors are only determined for baseline conditions for future use activities. Based on the 'Current and Future Activities' Worksheet, the Total Potential Contact Time is: receptor hrs/yr
Based on the table above, this corresponds to a input factor score of: Score

Response Alternative No. 1: Land Use Controls

Based on the 'Planned Remedial or Removal Actions' Worksheet, land use activities will not change if this alternative is implemented.
Total Potential Contact Time, based on the contact time listed for current use activities (see 'Current and Future Activities' Worksheet) **69,520**

Amount of MEC Input Factor Categories

The following table is used to determine scores associated with the Amount of MEC:

	Description	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
Target Area	Areas at which munitions fire was directed	180	120	30
OB/OD Area	Sites where munitions were disposed of by open burn or open detonation methods. This category refers to the core activity area of an OB/OD area. See the "Safety Buffer Areas" category for safety fans and kick-outs.	180	110	30
Function Test Range	Areas where the serviceability of stored munitions or weapons systems are tested. Testing may include components, partial functioning or complete functioning of stockpile or developmental items.	165	90	25
Burial Pit	The location of a burial of large quantities of MEC items.	140	140	10
Maneuver Areas	Areas used for conducting military exercises in a simulated conflict area or war zone	115	15	5
Firing Points	The location from which a projectile, grenade, ground signal, rocket, guided missile, or other device is to be ignited, propelled, or released.	75	10	5
Safety Buffer Areas	Areas outside of target areas, test ranges, or OB/OD areas that were designed to act as a safety zone to contain munitions that do not hit targets or to contain kick-outs from OB/OD areas.	30	10	5
Storage	Any facility used for the storage of military munitions, such as earth-covered magazines, above-ground magazines, and open-air storage areas.	25	10	5
Explosive-Related Industrial Facility	Former munitions manufacturing or demilitarization sites and TNT production plants	20	10	5

Public Review Draft - Do Not Cite or Quote

Minimum MEC Depth Relative to the Maximum Intrusive Depth Input Factor Categories

Current Use Activities

The shallowest minimum MEC depth, based on the 'Cased Munitions Information' Worksheet: **0.5** ft

The deepest intrusive depth: **0** ft

No construciton or excavations planned

The table below is used to determine scores associated with the minimum MEC depth relative to the maximum intrusive depth:

	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
Baseline Condition: MEC located surface and subsurface. After Cleanup: Intrusive depth overlaps with subsurface MEC.	240	150	95
Baseline Condition: MEC located surface and subsurface, After Cleanup: Intrusive depth does not overlap with subsurface MEC.	240	50	25
Baseline Condition: MEC located only subsurface. Baseline Condition or After Cleanup: Intrusive depth overlaps with minimum MEC depth.	150	N/A	95
Baseline Condition: MEC located only subsurface. Baseline Condition or After Cleanup: Intrusive depth does not overlap with minimum MEC depth.	50	N/A	25

Because the shallowest minimum MEC depth is greater than the deepest intrusive depth, the intrusive depth will not overlap after cleanup. MECs are located only subsurface, based on the 'Munitions, Bulk Explosive Info' Worksheet. Therefore, the category for this input factor is 'Baseline Condition: MEC located only subsurface. Baseline Condition or After Cleanup: Intrusive depth does not overlap with minimum MEC depth.' For 'Current Use Activities', only Baseline Conditions are considered. **50** ***Score***

Future Use Activities

Deepest intrusive depth: ft

Not enough information has been entered to determine the input factor category. ***Score***

Response Alternative No. 1: Land Use Controls

Expected minimum MEC depth (from the 'Planned Remedial or Removal Actions' Worksheet): **0.5** ft

Based on the 'Planned Remedial or Removal Actions' Worksheet, land use activities will not change if this alternative is implemented.

Maximum Intrusive Depth, based on the maximum intrusive depth listed for current use activities (see 'Current and Future Activities' Worksheet) **0** ft

Because the shallowest minimum MEC depth is greater than the deepest intrusive depth, the intrusive depth does not overlap. MECs are located only subsurface, based on the 'Munitions, Bulk Explosive Info' Worksheet. Therefore, the category for this input factor is 'Baseline Condition: MEC located only subsurface. Baseline Condition or After Cleanup: Intrusive depth does not overlap with minimum MEC depth.'

Score

Baseline Conditions: **50**

Surface Cleanup:

Subsurface Cleanup:

Response Alternative No. 2: Subsurface Clearance

Expected minimum MEC depth (from the 'Planned Remedial or Removal Actions' Worksheet): **0.5** ft

Based on the 'Planned Remedial or Removal Actions' Worksheet, land use activities will not change if this alternative is implemented.

Maximum Intrusive Depth, based on the maximum intrusive depth listed for current use activities (see 'Current and Future Activities' Worksheet) **0** ft

Because the shallowest minimum MEC depth is greater than the deepest intrusive depth, the intrusive depth does not overlap. MECs are located only subsurface, based on the 'Munitions, Bulk Explosive Info' Worksheet. Therefore, the category for this input factor is 'Baseline Condition: MEC located only subsurface. Baseline Condition or After Cleanup: Intrusive depth does not overlap with minimum MEC depth.'

Score

Baseline Conditions:

Surface Cleanup:

Subsurface Cleanup: **25**

Migration Potential Input Factor Categories

Is there any physical or historical evidence that indicates it is possible for natural physical forces in the area (e.g., frost heave, erosion) to expose subsurface MEC items, or move surface or subsurface MEC items? **No**

If "yes", describe the nature of natural forces. Indicate key areas of potential migration (e.g., overland water flow) on a map as appropriate (attach a map to the bottom of this sheet, or as a separate worksheet).

The following table is used to determine scores associated with the migration potential:

	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
Possible	30	30	10
Unlikely	10	10	10

Based on the question above, migration potential is 'Unlikely.'

	Score
Baseline Conditions:	**10**
Surface Cleanup:	**10**
Subsurface Cleanup:	**10**

ERT, 2012b. Baltimore District. Draft RCRA Facility Investigation Report. December.

MEC Classification Input Factor Categories

Cased munitions information has been inputed into the 'Munitions, Bulk Explosive Info' Worksheet; therefore, bulk explosives do not comprise all MECs for this MRS.

The 'Amount of MEC' category is 'Safety Buffer Areas'. It cannot be automatically assumed that the MEC items from this category are DMM. Therefore, the conservative assumption is that the MEC items in this MRS are UXO.

Has a technical assessment shown that MEC in the OB/OD Area is DMM?

Are any of the munitions listed in the 'Munitions, Bulk Explosive Info' Worksheet: **Yes**

- Submunitions
- Rifle-propelled 40mm projectiles (often called 40mm grenades)
- Munitions with white phosphorus filler
- High explosive anti-tank (HEAT) rounds
- Hand grenades
- Fuzes
- Mortars

At least one item listed in the 'Munitions, Bulk Explosive Info' Worksheet was identified as 'fuzed'.

The following table is used to determine scores associated with MEC classification categories:

UXO Special Case	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
UXO Special Case	180	180	180
UXO	110	110	110
Fuzed DMM Special Case	105	105	105
Fuzed DMM	55	55	55
Unfuzed DMM	45	45	45
Bulk Explosives	45	45	45

Based on your answers above, the MEC classification is 'UXO Special Case'.

	Score
Baseline Conditions:	**180**
Surface Cleanup:	**180**
Subsurface Cleanup:	**180**

MEC Size Input Factor Categories

The following table is used to determine scores associated with MEC Size:

	Description	Baseline Conditions	Surface Cleanup	Subsurface Cleanup
Small	Any munitions (from the 'Munitions, Bulk Explosive Info' Worksheet) weigh less than 90 lbs; small enough for a receptor to be able to move and initiate a detonation	40	40	40
Large	All munitions weigh more than 90 lbs; too large to move without equipment	0	0	0

Based on the definitions above and the types of munitions at the site (see 'Munitions, Bulk Explosive Info' Worksheet), the MEC Size Input Factor is: **Small**

	Score
Baseline Conditions:	**40**
Surface Cleanup:	**40**
Subsurface Cleanup:	**40**

RE: Notice of Decision; Reissuance of the Fort Stewart Hazardous Waste Facility Permit #HW-045(S), incorporating Permit Application dated February 9, 2007, as amended; EPA ID No. GA9 210 020 872.

Dear Mr. Biering:

Enclosed please find Hazardous Waste Facility Permit #HW-045(S) which is hereby reissued to Fort Stewart, Hinesville, Georgia. The Permit requires Fort Stewart to properly manage the storage of hazardous wastes and to investigate and conduct corrective action at solid waste management units (SWMUs) and areas of concern (AOC) identified during past and future investigations by Fort Stewart and the Environmental Protection Division.

This is also to acknowledge receipt of the facility's comments dated August 1, 2007, and as verbalized in a meeting with a representative of the Georgia Environmental Protection Division (GA EPD) on July 31, 2007. We additionally received comments from Algeana Stevenson of Fort Stewart on August 7, 2007 (after the public comment period). These comments were regarding the removal of the Area of Concern (AOC) Sites 1 – 5 and 7 - 8 from Appendix A of the Permit, and the investigation of these sites under an initiative the Department of Defense calls the Munitions Response Site Prioritization Protocol (MRSPP). We have considered the submitted comments and have the following responses to those comments:

- **AOC 1, AOC 4, and AOC 5:** Since, as indicated in Ms. Stevenson's August 7, 2007 comments, AOC 1, AOC 4, and AOC 5 are operating ranges, they will be noted as such in the permit, and will require investigation when the ranges are closed.

- **AOC 3 & AOC 7:** In the August 7, 2007 comments, Ms. Stevenson stated that the Draft Confirmatory Sampling Report concluded that none of the potential munition constituents of concern exceeded their respective regulatory levels at AOC 3 and AOC 7. However, we have not received a final report documenting these findings. If no hazardous constituents or UXO exist in the subject areas, no further action will be required.

- **AOC 2:** The August 7, 2007 comments also noted that Fort Stewart is proposing to revert AOC 2 back to an operational range; however, until that time, the status of the site in the permit remains unchanged.

- **AOC 8:** The August 7, 2007 comments indicated that AOC 8 requires further investigation and should remain in the permit; however, under the Munitions Response Site Prioritization Protocol (MRSPP), this site will not be investigated until 2011. Once we have evaluated the final MRSPP scoring and have been provided with a schedule for investigation of the site, the permit may be modified to incorporate the schedule.

For AOC 2, AOC 3, AOC 7, and AOC 8, we understand that the final Confirmatory Sampling Report will be submitted in September 2007, and will meet the initial deadline of Requirement III.C.4 of the permit.

The final permit is effective immediately and is subject to appeal for thirty (30) days after its issuance. You are hereby informed of the right to be represented by legal counsel, to petition for a hearing on this Permit within thirty (30) days from the date of issuance of the same, and that such Permit shall become final unless a petition for a hearing is filed with the Director as set forth below within thirty (30) days from the date of issuance of the Permit.

The original and three (3) copies of any petition for a hearing in this matter shall be filed with the Director by hand delivering same to the following address: Filing Clerk, Environmental Protection Division, 2 Martin Luther King, Jr., Drive, S.E., Suite 1152, Atlanta, Georgia 30334, or by mailing same to the Director at the following address:

Carol A. Couch, Ph.D., Director
ATTN.: Filing Clerk
Environmental Protection Division
2 Martin Luther King, Jr., SE, Suite 1152
Atlanta, Georgia 30334

The Petition for Hearing shall be deemed filed on the date received by the Filing Clerk or when mailed by first class mail, with proper postage attached, and properly addressed, whichever comes first. A separate copy of any Petition for Hearing shall be served on the Director's counsel of record, to wit:

John Hennelly, Senior Assistant Attorney General
132 State Judicial Building
40 Capitol Square, SW
Atlanta, Georgia 30334-1300

A copy of the rules governing the filing for a petition for hearing, and the procedures involved in any hearing thereon, may be found at Chapter 391-1-2 of the Rules and Regulations of the State of Georgia published by the Georgia Secretary of State.

Should you have any questions concerning this Permit, please contact Fred Rowe at (404) 656-2833

Sincerely,

Carol A. Couch, Ph.D.
Director

State of Georgia

Department of Natural Resources

ENVIRONMENTAL PROTECTION DIVISION

HAZARDOUS WASTE FACILITY PERMIT

Permit No. HW-045(S) **Facility I.D. No. GA9 210 020 872**

In accordance with the provisions of the Georgia Hazardous Waste Management Act and the Rules, Chapter 391-3-11, (as amended through **March 13, 2006**), adopted pursuant to that Act,

Fort Stewart

is issued a Permit for the following:

Storage of 124,080 gallons of hazardous waste in containers in Building No. 1157

at the following location:

Fort Stewart
1550 Frank Cochran Drive
Fort Stewart, Georgia 31314-5000

This Permit is conditioned upon compliance with all provisions of the Georgia Hazardous Waste Management Act, the Rules, Chapter 391-3-11 (as amended through **March 13, 2006**) adopted pursuant to that Act, and any other condition of this Permit.

This Permit is subject to revocation, suspension, modification or amendment by the Director for cause including evidence of noncompliance with any of the above; or for any misrepresentation made in the application(s) dated **February 9,2007** supporting data entered therein or attached thereto, or any subsequent submittals or supporting data; or for failure to disclose fully all relevant facts; or when the facility poses a threat to the environment or the health of humans.

This Permit is further subject to and conditioned upon the terms, conditions, limitations, standards, or schedules contained in or specified on the attached **27** page(s), which page(s) are a part of this Permit.

Permit Issuance Date: **August 14, 2007**
Permit Termination Date: **August 14, 2017**

Director
Environmental Protection Division

Permit Number: HW-045(S)
Fort Stewart - EPA ID No. GA9 210 020 872, hereafter referred to as the Permittee.

SECTION I: GENERAL PERMIT CONDITIONS

I.A Scope and Effect of Permit

I.A.1 The Permittee is allowed to store and treat hazardous waste in accordance with the Conditions of this Permit. Any hazardous waste treatment, storage or disposal not authorized in this Permit is prohibited, unless such treatment or storage is specifically authorized by the Director. The Permittee must comply with the Georgia Hazardous Waste Management Act and the Georgia Rules for Hazardous Waste Management, Chapter 391-3-11, which Rules include certain portions of the Federal Hazardous Waste Regulations (found at 40 CFR Parts 260-266, 268, 270, 273, 279, and 124). Where a citation to the Federal Regulations is made in this Permit, it refers to the specific regulations adopted by the Environmental Protection Division of the Georgia Department of Natural Resources.

I.A.2 The issuance of this Permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations.

I.A.3 Compliance with this Permit does not constitute a defense to any action brought by the Director under Section §12-8-75, "Powers of Director in situations involving imminent and substantial endangerment to the environment or to public health," of the Georgia Hazardous Waste Management Act, as amended.

I.A.4 Nothing in this Permit shall be construed to preclude the institution of any legal action under Section 3008 of the Federal Resource Conservation and Recovery Act or under the Georgia Hazardous Waste Management Act, O.C.G.A. §§12-8-81 through 12-8-82, as amended.

I.A.5 This Permit may be modified, revoked and reissued, or terminated for cause as specified in Rule 391-3-11-.11(7) and 40 CFR §§270.41, 270.42, and 270.43. The filing of a request for a Permit modification, variation and reissuance, or termination or the notification of planned changes or anticipated noncompliance on the part of the Permittee does not stay the applicability of any Permit Condition.

I.A.6 The provisions of this Permit are severable, and if any provision of this Permit or the application of any provision of this Permit to any circumstance is held invalid, the application of such provision to other circumstances, and the remainder of this Permit shall not be affected thereby.

I.B **Management Requirements**

I.B.1 The Permittee shall give notice to the Director at least thirty (30) days prior to any planned physical alterations or additions to the Permitted facility or of any planned changes in the process generating the hazardous waste which changes might affect the performance of the Permitted facility.

I.B.2 The Permittee shall maintain at the facility until closure is completed and certified by an independent registered professional engineer, the following documents and amendments, revisions and modifications to these documents:

(a) Complete copy of this Permit and the Permit Application dated February 9, 2007, as amended;
(b) Waste Analysis Plan;
(c) Personnel Training documents and records;
(d) Contingency Plan;
(e) Closure and Post-Closure Plans;
(f) Miscellaneous Units Monitoring Plan;
(g) Operating Record; and
(h) Inspection Schedule and Log.

I.B.3 All amendments, revisions and modifications to any plan required by this Permit shall be submitted to the Director for approval and Permit modification as necessary.

I.B.4 When the Permittee becomes aware that the Permittee failed to submit any relevant facts in the Permit Application dated February 9, 2007, as amended, or submitted incorrect information in the Permit Application dated February 9, 2007, as amended, or in any report to the Director, the Permittee shall promptly submit such facts or information.

I.B.5 The Permittee shall at all times properly operate and maintain all facilities which are installed and/or used

by the Permittee to achieve compliance with the Conditions of this Permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of a back up or auxiliary facility or similar systems only when necessary to achieve compliance with the Conditions of this Permit.

I.B.6 The Permittee may not commence treatment, storage or disposal of hazardous waste at any new or modified portion of the facility or corrective action of any contaminated groundwater until the Permittee has submitted to the Director by certified mail or hand delivery a letter signed by the Permittee and a registered professional engineer stating that the facility has been constructed or modified in compliance with the Permit where appropriate; and

(a) The Director has inspected the modified or newly constructed facility and finds it is in compliance with the Conditions of the Permit; or

(b) The Director has either waived the inspection or has not within fifteen (15) days notified the Permittee of his or her intent to inspect.

I.C Monitoring and Reporting

I.C.1 Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity. The method used to obtain a representative sample of the waste to be analyzed must be the appropriate method from 40 CFR Part 261 Appendix I. Laboratory methods must be those specified in the most recent editions of Test Methods for Evaluating Solid Waste: Physical/Chemical Methods, SW 846; or Standard Methods for the Examination of Water and Wastewater; (or an equivalent method as specified in the Waste Analysis Plan). Sampling protocol shall follow the guidance as set forth in the most recent edition of the Environmental Protection Agency Region IV Environmental Investigations Standard Operating Procedures and Quality Assurance Manual (EISOPQAM).

I.C.2 The Permittee shall retain records of all monitoring information, including all calibration and maintenance

records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports, records, and certifications required by this Permit and records of all data used to complete the application for this Permit including the certification required by 40 CFR §264.73(b)(9) for a period of at least three (3) years from the date of the sample, measurement, report or record. These periods are automatically extended during the course of any unresolved enforcement action regarding this facility and also may be extended at any time at the Director's discretion.

I.C.3 Records of monitoring information shall include:

(a) The date, exact place and time of sampling or measurements;
(b) The individual(s) who performed the sampling;
(c) The date(s) analyses were performed;
(d) The individual(s) who performed the analyses;
(e) The analytical techniques or methods used, the method of sample preservation, and quality assurance methods; and
(f) The results of such analyses.

I.C.4 The Permittee shall report to the Director or his representative orally within 1 hour from the time the Permittee becomes aware of any circumstances resulting from the conditions at the hazardous waste management facility which may endanger human health or the environment, or any unauthorized releases from the operation of the facility (including periods of noncompliance), including but not limited to:

(a) Release of any hazardous waste, hazardous waste constituent, or hazardous constituent that may cause an endangerment to public or private drinking water supplies; and

(b) Release or discharge of hazardous waste, hazardous waste constituents, or hazardous constituents, or a fire or explosion which could threaten human health or the environment outside the facility.

I.C.5 The description of the reportable incident, as defined in Condition I.C.4, shall include:

(a) Name, address and telephone number of the owner or operator;

(b) Name, address and telephone number of the facility;
(c) Date, time and type of incident;
(d) Name and quantity of materials involved;
(e) The extent of injuries, if any;
(f) An assessment of actual or potential hazards to the environment and human health inside and outside the facility, where this is applicable; and
(g) Estimated quantity and disposition of recovered material that resulted from the incident.

I.C.6 Within fifteen (15) days of becoming aware of any reportable incident as defined in Condition I.C.4 above, the Permittee shall submit a written report of the incident covering the following:

(a) Description of occurrence as in I.C.4 above;
(b) Cause of occurrence;
(c) Period of occurrence, including exact dates and times;
(d) Time occurrence expected to continue (if not already corrected); and
(e) Steps taken or planned to reduce, eliminate, and prevent recurrence.

I.C.7 Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this Permit shall be submitted no later than fourteen (14) days following each schedule date.

I.C.8 The Permittee shall report instances of non-compliance, other than those described in Conditions I.C.4 and I.C.7, semi-annually on July 15 (covering January 1 - June 30) and January 15 (covering July 1 - December 31). The report shall cover the information requested in Condition I.C.5 for each incident.

I.C.9 All reports or other information requested by the Director shall be signed and certified according to the requirements in 40 CFR §270.11.

I.D **Responsibilities**

I.D.1 Right of Entry. The Permittee shall allow the Director of GA EPD, the Regional Administrator of EPA, and/or their authorized representatives, agents, or employees, upon the presentation of credentials and other documents as may be required by law to:

(a) Enter upon the Permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the Conditions of this Permit;

(b) Have access to and copy any records that must be kept under the Conditions of this Permit;

(c) Inspect any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Permit; and

(d) Sample or monitor for the purposes of assuring Permit compliance or as otherwise authorized by the Georgia Hazardous Waste Management Act, any substances or parameters at any location.

I.D.2 Transfer of Permits. This Permit may be transferred to a new owner or operator only if it is modified or revoked and reissued pursuant to 40 CFR §§270.40(b) or 270.41(b)(2) to identify the new Permittee and incorporate such other requirements as may be necessary under the appropriate Act. Before transferring ownership or operation of the facility during its operating life, the Permittee shall notify the new owner or operator in writing of the requirements of 40 CFR Parts 264, 268 and 270.

I.D.3 Duty to Comply. The Permittee shall comply with all Conditions of this Permit, except to the extent and for the duration such non-compliance is authorized by an emergency Permit. Any noncompliance with this Permit constitutes a violation of the Georgia Hazardous Waste Management Act and is grounds for enforcement action, Permit termination, revocation and reissuance, modification, or for denial of a Permit renewal application.

I.D.4 Duty to Reapply. If the Permittee wishes to continue an activity regulated by this Permit after the expiration date of this Permit, the Permittee must submit a complete application for a new Permit at least 180 days before this Permit expires.

I.D.5 Need to Halt or Reduce Activity Not a Defense. It shall not be a defense for the Permittee in an enforcement action that it would have been necessary to halt or

reduce the Permitted activity in order to maintain compliance with the Conditions of this Permit.

I.D.6 Duty to Mitigate. The Permittee shall take all reasonable steps to minimize or correct any adverse impact on human health or the environment resulting from non-compliance with this Permit.

I.D.7 Duty to Provide Information. The Permittee shall furnish to the Director, within a reasonable time, any relevant information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Permit or to determine compliance with the Permit. The Permittee shall also furnish to the Director, upon request, copies of records required to be kept by this Permit.

I.D.8 Anticipated Non-Compliance. The Permittee shall give advance notice to the Director of any planned changes in the Permitted facility or activity which may result in non-compliance with Permit requirements.

I.D.9 Reporting Planned Changes. The Permittee shall give notice to the Director as soon as possible of any planned physical alterations or additions to the Permitted facility, including any investigative or corrective action activities.

I.E Definitions

For purposes of this Permit, terms used herein shall have the same meaning as those in 40 CFR Parts 124, 260 through 268, 270 and 279, unless this Permit specifically provides otherwise; where terms are not defined in the regulations or the Permit, the meaning associated with such terms shall be defined by a standard dictionary reference or the generally accepted scientific or industrial meaning of the term.

Area of Concern (AOC) for the purposes of this Permit includes any area having a probable release of a hazardous waste, hazardous constituent, or hazardous waste constituent which is not from a solid waste management unit and is determined by the Director to pose a current or potential threat to human health or the environment. Investigation and remedial action of such areas of concern may be required under the Georgia Hazardous Waste Management Act, §12-8-60, et seq, and 40 CFR §270.32(b)(2) in order to ensure adequate protection of human health and the environment.

Contamination for the purposes of this Permit refers to the presence of any hazardous waste, hazardous waste constituents or hazardous constituents in a concentration which exceeds the naturally occurring concentration of that waste or constituent in the immediate vicinity of the facility (in areas not affected by the facility).

Corrective Action for prior or continuing releases from any solid waste management units at the facility, as well as for other releases, for the purposes of this Permit shall be any measure necessary to protect human health and the environment for all releases of hazardous waste or hazardous constituents from said solid waste management units at the facility, regardless of the time at which waste was placed in the unit, as required under 40 CFR §264.100 and/or §264.101, and as required under the Georgia Hazardous Waste Management Act §12-8-60, et. seq. Corrective action may address releases to air, soils, surface water or groundwater.

Day for the purposes of this Permit shall mean a calendar day.

Extent of contamination for the purposes of this Permit is defined as the horizontal and vertical area in which the concentrations of hazardous waste, hazardous waste constituents or hazardous constituents in the environmental media being investigated are above estimated quantitation limits, as defined in the most recent version of SW-846 or naturally occurring concentrations representative of the facility.

Facility for purposes of this Permit includes all contiguous land, and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (e.g. one or more landfills, surface impoundments, or combination of them). For the purposes of implementing corrective action under 40 CFR §264.101, a facility includes all contiguous property under the control of the owner or operator seeking a Permit under the Georgia Hazardous Waste Management Act.

Hazardous Constituents for the purposes of this Permit are those substances listed in 40 CFR Part 261 Appendix VIII, "Hazardous Constituents," and Part 264 Appendix IX, "Groundwater Monitoring List."

Investigation-Derived Waste (IDW) for the purposes of this permit is defined as waste generated through investigative processes. IDW may include, but is not limited to, drilling muds, cuttings, and purge water from test pit and well installations; purge water, soil, and other materials from collection of samples; residues (e.g., ash, spent carbon, well

development purge water) from testing of treatment technologies including pump and treat systems; contaminated personal protective equipment (PPE); and solutions (aqueous or otherwise) used to decontaminate equipment.

Interim Measures (IM) for purposes of this Permit are actions necessary to minimize or prevent the further migration of contaminants or limit actual or potential human and environmental exposure to contaminants while long-term corrective action remedies are evaluated and, if necessary, implemented.

Land Disposal Facility for purposes of this Permit is a facility that uses a surface impoundment, landfill, land treatment or waste pile unit to manage or dispose of hazardous waste pursuant to §12-8-66 of the Georgia Hazardous Waste Management Act, as amended, and §3004 of RCRA, as amended.

Qualified Groundwater Scientist for the purposes of this Permit means a scientist who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields, as demonstrated by a current State of Georgia registration and completion of accredited university courses, that enable that individual to make sound professional judgments regarding groundwater monitoring and contaminant fate and transport.

Release for the purposes of this Permit includes any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment of any hazardous waste, hazardous waste constituents or hazardous constituents.

Remediation waste for the purposes of this Permit includes all solid and hazardous wastes, and all media (including ground water, surface water, soils, and sediments) and debris, which contain listed hazardous wastes or which themselves exhibit a hazardous waste characteristic, that are managed for the purpose of implementing corrective action requirements under 40 CFR §264.101 and Section 12-8-71(b) of the Georgia Hazardous Waste Management Act. For a given facility, remediation wastes may originate only from within the facility boundary, but may include waste managed in implementing corrective action required under 40 CFR §264.101(c) for releases beyond the facility boundary.

Solid Waste Management Unit (SWMU) for the purposes of this Permit includes, but is not limited to, any landfill, surface

impoundment, waste pile, land treatment unit, incinerator, injection well, tank (including storage, treatment, and accumulation tanks), container storage unit, wastewater treatment unit, elementary neutralization unit, transfer station, or recycling unit or any other unit from which hazardous waste, hazardous waste constituents or hazardous constituents might migrate, irrespective of whether the units were intended for the management of solid and/or hazardous waste. SWMUs include areas that have been contaminated by routine and systematic releases of hazardous waste or hazardous constituents, excluding one-time accidental spills that are immediately remediated and cannot be linked to solid waste management activities (e.g., product or process spills).

Treatment for the purpose of this Permit refers to any method, technique, or process, including neutralization, designed to change the physical, chemical or biological character or composition of any hazardous waste so as to neutralize such waste, or so as to recover energy or material resources from the waste, or so as to render such waste non-hazardous, or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage or reduced in volume.

I.F Conditions Related to Compliance with General Facility Standards (40 CFR Part 264 Subparts B, C, D, E, G, H)

I.F.1 The Permittee must follow the procedures and plans described in detail in the Permit Application dated February 9, 2007, as amended, which are hereby incorporated by reference and include at least the following:

(a) Waste Analysis Plan - Section C-2
(b) Biennial Reporting - Section D-9
(c) Procedures to Prevent Hazards - Section F
(d) Contingency Plan - Section G
(e) Personal Training Program - Section H
(f) Closure and Post-Closure Plans - Section I

I.F.2 The following activities must be carried out as prescribed in 40 CFR Part 264 Subparts B, C, D, and E.

(a) Required Notices - §264.12(a) and (b)
(b) Security - §264.14(b) and (c)
(c) Repairs and Inspection Log - §264.15(c) and (d)
(d) Annual Review of Training - §264.16(c)

(e) General Requirements for Ignitable, Reactive and Incompatible Wastes - §264.17
(f) Design and Operation - §264.31
(g) Testing and Maintenance of Equipment - §264.33
(h) Access to Communications or Alarm System - §264.34
(i) Maintain Aisle Space - §264.35
(j) Arrangements with Local Authorities - §264.37
(k) Amendment of Contingency Plan - §264.54
(l) Operating Record - §264.73 and Disposition of Records §264.74
(m) Reports - §264.75 and §264.77
(n) Manifest System - §264.70 through §264.72

I.F.3 The following activities must be carried out as prescribed in 40 CFR Part 264 Subparts G & H, and Section I of the Permit Application dated February 9, 2007, as amended.

(a) Closure Performance Standard - §264.111 and §264.112
(b) Closure in Accordance with Approved Plan - §264.113
(c) Amendment of Closure Plan and Notification of Closure - §264.112(b) and (c)
(d) Disposal or Decontamination of Equipment - §264.114
(e) Certification of Closure - §264.115
(f) Contingent Post-Closure - §264.117
(g) Amendment of Post-Closure Plan - §264.118
(h) Post-Closure Notices - §264.119
(i) Certification of Completion of Post-Closure - §264.120

I.G Special Conditions Applicable to Entire Facility

I.G.1 Waste Minimization. The Permittee shall be required to certify no less often than annually that the Permittee has a program in place to reduce the volume and toxicity of hazardous waste that he generates to the degree determined by the Permittee to be economically practicable, and the proposed method of treatment, storage, or disposal is that practicable method currently available to the Permittee which minimizes the present and future threat to human health and the environment in accordance with 40 CFR §264.73(b)(9).

I.G.2 Land Disposal Restrictions. The Permittee shall comply with all provisions of 40 CFR §268 (Land Disposal Restrictions) for all wastes to which they are applicable.

I.G.3 Contingency Plan. The Permittee must submit any revisions of the Contingency Plan to those government agencies and local authorities listed in Section G of the application within twenty (20) days of approval of the revision by the Director.

I.G.4 Relationship with Tenant Commands and Other Activities. Each tenant command, contractor worksite, deployable unit, Army and Air Force Exchange Service (AAFES) operation, or other activity at the Facility is subject to the conditions of this permit.

a. All satellite accumulation areas including those at tenant commands and other activities shall be operated in accordance with all requirements of Section 391-3-11-.08 of the Rules (40 CFR 262 Subpart C).
b. Accumulated waste at any satellite accumulation area shall be removed within three days of completion of accumulation to Building 1157.

I.G.6 Generator Accumulation Sites. The Permittee shall provide the following at each individual or group generator accumulation site, 90-day area, satellite accumulation area, or area where IDW is managed at the Facility:

a. Secondary containment and leak detection for containers, conforming to the requirements of 40 CFR 264 Subpart I. All containers, regardless of age or contents, are subject to this requirement.
b. Secondary containment and leak detection for tanks, conforming to the requirements of 40 CFR 264 Subpart J. All tanks, regardless of age or contents, are subject to this requirement.
c. The secondary containment requirement for satellite accumulation areas and areas where Investigation-Derived Waste (IDW) is managed may be waived if the unit is located on a competent, impervious, compatible surface, and protected from precipitation.

I.H Standards for the Management of Used Oil

I.H.1 Definitions. Terms used in this section shall be defined as in 40 CFR Part 279.

I.H.2 Applicability. The conditions in this section apply to all used oil generation and management points at the Facility. The Facility is also subject to the applicable Spill Prevention, Control and Countermeasures

requirements (40 CFR Part 112) and, for those sites utilizing underground tanks, the Underground Storage Tank requirements (40 CFR Part 280), whether or not the used oil exhibits any characteristics of hazardous waste. Determination of jurisdiction for underground storage tanks at the Facility shall be performed by the Director on a unit-by-unit basis.

I.H.3 General. The Permittee shall be subject to the requirements of 40 CFR Part 279 for the generation and management of used oil generated by, received at, or shipped from the Facility. Unless otherwise stated in Section I.H.4 below, used oil activities at the Facility shall comply with the requirements of 40 CFR Part 279 Subpart C.

I.H.4 Storage of Used Oil. The Permittee shall store used oil only in containers or tanks; for the purposes of this authorized storage, secondary containment and spill prevention, control, and countermeasures structures or devices (specifically including Wash Racks) are not considered containers or tanks. Storage containers and tanks shall be maintained and labeled, and releases responded to, as in 40 CFR Part 279 Subpart F. Containers of used oil generated at the Facility shall be transferred within 72 hours of completion of accumulation to the accumulation tank assigned to the generating activity.

SECTION II: STORAGE IN CONTAINERS

II.A **General.** The Conditions in this section apply to the Hazardous Waste Storage Facility, Building Number 1157, as depicted in the Topographic Map, Figure B-2, and shown in Figures B-6, B-7, B-8, B-9, D-1 and D-2 of the Permit Application dated February 9, 2007, as amended.

II.B **Conditions Related Solely to Storage in Containers**

II.B.1 The Permittee is authorized to store a maximum of 124,080 gallons of hazardous waste in the Hazardous Waste Storage Facility, Building Number 1157, as identified in Section D of the Permit Application dated February 9, 2007, as amended.

II.B.2 If a container holding hazardous waste is not in good condition, or if it begins to leak, the Permittee shall transfer the hazardous waste from such container to a container that is in good condition.

II.B.3 Containers must be managed according to 40 CFR §264.173.

II.B.4 Spilled or leaked waste and accumulated precipitation must be managed in accordance with 40 CFR §264.175(b)(5).

II.B.5 Incompatible wastes and materials must be managed according to 40 CFR §264.177.

II.B.6 The Permittee shall maintain the containment system in accordance with 40 CFR §264.175.

II.B.7 Each container in the Hazardous Waste Storage Facility, Building 1157, must be clearly marked with the words "Hazardous Waste," the applicable EPA Hazardous Waste Number(s) found in 40 CFR Part 261, and a description of the actual contents of that container.

II.B.8 If applicable, the Permittee shall comply with all of the requirements and provisions of 40 CFR 264 Subpart AA - Air Emission Standards for Process Vents, 40 CFR 264 Subpart BB - Air Emission Standards for Equipment Leaks, and 40 CFR 264 Subpart CC - Air Emission Standards for Tanks, Surface Impoundments, and Containers.

SECTION III: CORRECTIVE ACTION FOR RELEASES FROM SOLID WASTE MANAGEMENT UNITS AND AREAS OF CONCERN

III.A **Applicability.** The Conditions of this Permit Section III apply to all solid waste management units (SWMUs) and Areas of Concern (AOCs) listed in Appendix A and any additional SWMUs or AOCs discovered by any other means. The determination of the need for and implementation of Corrective Action is required by 40 CFR §264.101(a) and §12-8-66 of the Georgia Hazardous Waste Management Act for releases from all SWMUs and AOCs contained within the facility property boundaries and, as required by 40 CFR §264.101(c) and §12-8-66 of the Georgia Hazardous Waste Management Act, for releases extending beyond the facility property boundaries.

The Conditions of Permit Section III apply to:

(1) The SWMUs and AOCs, identified in Appendix A, which are undergoing corrective action per an approved Corrective Action Plan (CAP);
(2) The SWMUs and AOCs, identified in Appendix A, which require RCRA Facility Investigation (RFI);
(3) The SWMUs and AOCs, identified in Appendix A, which require Confirmatory Sampling (CS);
(4) The SWMUs and AOCs, identified in Appendix A, which require a SWMU Assessment Report (SAR);
(5) The SWMUs and AOCs, identified in Appendix A, which require no further action under this Permit at this time; and
(6) Any additional SWMUs and AOCs discovered during the course of groundwater monitoring, field investigations, environmental audits, or other means.

III.B **Notification and Assessment Requirements for Newly Identified SWMUs and AOCs and for Newly Discovered Releases at Previously Identified SWMUs and AOCs**

III.B.1 The Permittee shall notify the Director in writing, within fifteen (15) days of discovery, of any additional SWMUs or AOCs discovered during the course of groundwater monitoring, on-going field investigations, environmental audits, or any other means. This shall include, but is not limited to, newly discovered releases at previously identified SWMUs or AOCs. Notification shall include, at a minimum, the location of the SWMU or AOC and all available information pertaining to the nature of the release (e.g., media affected, hazardous constituents released, magnitude of release, etc.). The Permit shall be modified in accordance with 40 CFR Part 270 to incorporate the newly discovered SWMUs or AOCs.

III.B.2 The Permittee shall prepare and submit to the Director, within sixty (60) days of discovery of a SWMU or AOC as identified in Condition III.B.1 or within sixty (60) days of notification by the Director, a SWMU Assessment Report (SAR). The SAR shall describe the methods and specific actions used to determine whether a prior or continuing release of hazardous waste, hazardous constituents or hazardous waste constituents has occurred. At a minimum, the SAR shall provide the following information for each SWMU or AOC:

(a) Type of unit;
(b) Location of each unit in a topographic map of appropriate scale, as required by 40 CFR §270.14(b)(19);
(c) General dimensions, capacities and structural description of the unit (supply any available plans/drawings);
(d) Function of unit;
(e) Dates that the unit was operated;
(f) Description of the wastes that have been managed at/in the unit to the extent available. Include any available data on hazardous constituents in the wastes; and
(g) Description of any known releases or spills (to include groundwater data, soil analyses, sediment, air, and/or surface water data). If the report is being prepared as a result of a newly discovered release at a previously identified SWMU or AOC, the data may be limited to that pertaining to the newly discovered release, as long as a brief summary of the investigative and remedial actions taken in response to previous releases at the SWMU and/or AOC is provided, along with the current status in relation to those releases.

III.B.3 Based on the contents of the SAR, the Director shall determine the need for further investigations at the SWMU or AOC covered in the SAR. If the Director determines that such investigations are needed, the Permittee shall be notified to prepare a Confirmatory Sampling Work Plan, as outlined in Condition III.C, or an RFI Work Plan, as outlined in Condition III.D, for such investigations.

III.C **Confirmatory Sampling (CS)**

III.C.1 The Permittee shall prepare and submit to the Director, within forty-five (45) days of notification by the Director, a Confirmatory Sampling (CS) Work Plan to determine any release from SWMUs or AOCs identified in Condition III.B.3. The CS Work Plan shall include schedules of implementation and completion of specific actions necessary to determine whether or not a release has occurred.

III.C.2 The CS Work Plan must be approved by the Director, in writing, prior to implementation.

III.C.3 The Permittee shall implement the confirmatory sampling in accordance with the approved CS Work Plan.

III.C.4 The Permittee shall prepare and submit to the Director in accordance with the schedule in the approved CS Work Plan, a Confirmatory Sampling (CS) Report which includes all data (including raw data), a summary and analysis of the data, and a recommendation for further investigation or No Further Action based upon contents of the CS Report.

III.C.5 Based on the results of the CS Report, the Director shall determine the need for further investigations at the SWMUs or AOCs covered in the CS Report. If the Director determines that such investigations are needed, the Permittee shall be required to prepare a plan for such investigations as outlined in Condition III.D.1. The Director will notify the Permittee of any No Further Action decision.

III.D **RCRA Facility Investigation (RFI)**

III.D.1 RFI Work Plan

III.D.1.a The Permittee shall complete and submit to the Director, within ninety (90) days of notification by the Director, an RFI Work Plan for those units identified under Conditions III.B.3 and III.C.5.

III.D.1.b The Permittee shall complete and submit, within ninety (90) days of notification by the Director, an RFI Work Plan for those SWMUs and AOCs referenced in Condition III.A as requiring an RFI.

III.D.1.c The RFI Work Plan required by Condition III.D.1 shall include, but is not limited to, a schedule for implementation and report submittal; a description of the specific actions necessary to determine the nature and extent of contamination (including releases that extend beyond the facility's property boundary); potential migration pathways for releases (e.g., air, land, surface water, and groundwater); actual or potential receptors; and applicable background concentrations. The Permittee must provide sufficient justification that migration through a potential pathway is not likely if it is not included in the plan. Such deletions are subject to the approval of the Director.

III.D.1.d Upon a determination by the Director that the Work Plan required by Condition III.D.1.a is complete, the Permittee shall conduct the RFI in accordance with the schedule contained in the approved Work Plan.

III.D.2 RFI Report

III.D.2.a The Permittee shall complete and submit the RFI Report in accordance with the schedule contained in the RFI Work Plan required by Permit Section III.D.1. The report shall provide a summary of all activities undertaken during the RFI to implement the approved Work Plan. The report shall provide a complete description of the nature and extent of contamination identified during the RFI including sources, migration pathways, actual or potential receptors and applicable background concentrations. The RFI Report shall address all releases which extend beyond the facility property boundary unless the Permittee demonstrates to the Director's satisfaction that, despite the Permittee's best efforts, the Permittee was unable to obtain permission to undertake actions required by the Work Plan.

III.D.2.b If the time required to conduct the RFI is greater than one hundred eighty (180) days, the Permittee may be required to provide the Director with quarterly RFI Progress Reports (90 day intervals) beginning ninety (90) days from the initiation of the RFI, as specified in the approved RFI Work Plan. The Progress Report shall, at a minimum, contain the following information:

(i) A description of the portion of the RFI completed;
(ii) Summaries of findings;
(iii) Summaries of any deviations from the approved RFI Work Plan during the reporting period;
(iv) Summaries of all contacts with local community public interest groups or State government regarding RFI investigations;
(v) Summaries of any problems or potential problems encountered during the reporting period;
(vi) Actions taken to rectify problems;
(vii) Changes in relevant personnel; and
(viii) Projected work for the next reporting period.

III.D.2.c The Director shall review the RFI Report required by Condition III.D.2.a, and upon determination that the report is complete, shall notify the Permittee of the need for further investigative actions and/or the need for corrective action as required under 40 CFR §264.101 and/or §12-8-71(b) of the Georgia Hazardous Waste Management Act.

III.E Corrective Action Plan (CAP)

III.E.1 The Director shall review the RFI Report required by Conditions III.D.2 and, upon a determination that the report is complete, shall notify the Permittee of the need for corrective action as required 40 CFR §264.101(a).

III.E.2 Upon a determination by the Director that corrective action is needed, the Permittee shall submit a CAP in accordance with a schedule to be determined by the Director. The CAP shall provide a description of the corrective measures to be taken with regard to those releases identified by the RFI Report required by Conditions III.D.2 including a schedule of implementation and completion, and a cost estimate for completion of Corrective Action.

III.E.3. Upon a determination by the Director that the CAP is complete, the Director shall initiate a Permit modification pursuant to 40 CFR §270.41 for remedy selection.

III.E.4 Upon approval of a corrective action plan required in Condition III.E.2, the Permittee will implement the selected remedy in accordance with the approved CAP and the schedule of implementation contained in the CAP.

III.E.5 Upon completion of corrective action per an approved CAP, the Permittee shall request a Permit modification to reflect the corrective action status of the SWMU(s) and/or AOC(s). Such a modification request which would result in a No Further Action determination will be a Class 3 modification pursuant to 40 CFR §270.42.

III.E.6 The Permittee may propose Risk-based standards in any corrective action plan required by the Director to be submitted pursuant to this Permit.

III.E.7 All plans and schedules required by the conditions of this Permit are, upon approval by the Director, incorporated into this Permit by reference and become an enforceable part of this permit. Any noncompliance with such approved plans and schedules shall be termed noncompliance with this Permit.

III.F Interim Measures (IM)

III.F.1 IM Work Plan

III.F.1.a Upon notification by the Director that Interim Measures (IM) are necessary for any SWMU and/or AOC, the Permittee shall prepare and submit an IM Work Plan. The IM Work Plan shall be submitted within thirty (30) days of such notification and shall minimally include the elements listed in Condition III.F.1.b. The Permittee may initiate an IM by submitting an IM Work Plan for approval and reporting in accordance with the requirement under Condition III.F.

III.F.1.b The IM Work Plan shall ensure that the interim measures are designed to mitigate any current or potential threat(s) to human health or the environment and are consistent with and integrated into any long-term solution at the facility. The IM Work Plan shall minimally include the following: Introduction/Purpose, Conceptual Model of Contaminant Migration, Evaluation of Interim Measure Alternatives, Description of Interim Measures (including any designs, plans, or specifications), and a Schedule of Implementation.

III.F.1.c The IM Work Plan must be approved by the Director, in writing, prior to implementation.

III.F.2 IM Implementation

III.F.2.a The Permittee shall implement the IM in accordance with the specifications and schedule in the approved IM Work Plan.

III.F.2.b The Permittee shall give notice to the Director, for approval, at least fifteen (15) days prior to any planned changes, reductions or additions to the IM Work Plan.

III.F.2.c Final approval of corrective action required under 40 CFR §264.101 which is achieved through IM shall be in accordance with 40 CFR §270.41 for remedy selection.

III.F.3 IM Report

III.F.3.a Upon completion of interim measures, the Permittee shall complete and submit an interim measures report within ninety (90) days. The report shall provide the following information:

(i) A description of interim measures implemented;
(ii) A summary of all data or other information obtained during implementation of interim measures; and
(iii) A summary of the effectiveness of the interim measures in achieving the objective of Condition III.E.1.b.

III.F.3.b If the time required for completion of interim measures is greater than one year, the Permittee shall provide the Director with progress reports at intervals specified in the approved Work Plan. The Progress Reports shall minimally contain the following information:

(i) A description of the portion of the interim measures completed;
(ii) Summaries of any deviation from the IM Work Plan during the reporting period;
(iii) Summaries of any problems or potential problems encountered during the reporting period;
(iv) Projected work for the next reporting period; and
(v) Copies of laboratory/monitoring data.

III.G Reporting, Recordkeeping and Response

III.G.1 All work plans and schedules shall be subject to approval by the Director prior to implementation. Upon approval, the Permittee shall implement all work plans and schedules as written, or as specified by the Director.

III.G.2 Two (2) copies of all reports and work plans required by the Conditions of the Permit Section III shall be provided by the Permittee to the Director. The Permittee shall provide up to two (2) additional copies of each report or work plan at the written request of the Director.

III.G.3 All work plans and reports shall be submitted in accordance with the approved schedule. Extensions of the due date for submittals may be granted by the Director based upon the Permittee's demonstration that sufficient justification for the extension exists. The extension request (1) must be submitted to the Director in writing (2) must be made in a timely manner and (3) must specify an alternate submittal due date.

III.G.4 The Permittee shall enter all monitoring, testing and analytical data obtained pursuant to the Conditions of this Permit into the operating record, as required by 40 CFR §264.73(b)(6).

III.G.5 All geologic and engineering reports required by this permit shall be signed and sealed by the appropriate Georgia registered professional as defined by State law. Additionally, reports containing ground water data or interpretation shall be accompanied by the following certification statement:

> I certify that I am a qualified ground-water scientist who has received a baccalaureate or postgraduate degree in the natural sciences or engineering, and have sufficient training and experience in ground-water hydrology and related fields, as demonstrated by state registration and completion of accredited university courses, that enable me to make sound professional judgments regarding ground-water monitoring and contaminant fate and transport. I further certify that this report was prepared by myself or by a subordinate working under my direction.

III.G.6 The Permittee shall ensure that all plans, reports, notifications, and other submissions to the Director required by the Conditions of the Permit Section III are signed and certified in accordance with 40 CFR §270.11.

III.G.7 All raw data, such as laboratory reports, drilling logs, bench-scale or pilot-scale data, and any other supporting information gathered or generated during activities undertaken pursuant to this section shall be maintained at the facility during the term of this Permit, including any reissued Permits.

III.G.8 All plans and schedules required by the Conditions of Permit Section III are, upon approval by the Director, incorporated into this section by reference and become an

enforceable part of this Permit. Any non-compliance with such approved plans and schedules shall be termed non-compliance with this Permit.

III.G.9 If the Director or the Permittee at any time determines that any reports or activities conducted pursuant to any plan required by Section III of this Permit, no longer satisfies the requirements of 40 CFR §264.101, this Permit, or the intent of that plan or report for prior or continuing releases, the Permittee must submit an amended plan to the Director within sixty (60) days of such determination.

APPENDIX A:
FORT STEWART HAZARDOUS WASTE PERMIT HW-045(S)
SOLID WASTE MANAGEMENT UNITS AND AREAS OF CONCERN

SWMU/AOC NUMBER	SWMU/AOC NAME	CORRECTIVE ACTION REQUIREMENT
1	Post South Central Landfill	CAP dated 12/99 & revised 5/22/00

MEMORANDUM

TO: Travis McCoun, USACE-CENAB
Tom Colozza, USACE- CENAB
David King, USACE-CENAB
Chris Larson, USACE-CENAB

FROM: Jennifer Harlan, ERT

DATE: June 14, 2012

SUBJECT: Transect spacing at the Hero Road Trench Area (HRTA) for the Military Munitions Response Program (MMRP) RCRA Facility Investigation (RFI), Fort Stewart, Georgia

On the morning of June 13, 2012, upon review of the first set of EM31 data collected the previous day at the HRTA, it was discovered that transects in the area had been laid out at a spacing of 6.09 m (20 feet) rather than the previously agreed upon 4.57 m (15 feet).

The transects were initially staked by licensed surveyors at an interval of 100 m or less at the 6.09 m spacing, based on coordinates provided by ERT to the surveyors; this work was completed on June 7, 2012. Brush cutting of these marked transects is currently ongoing and should be completed June 14, 2012. However, 6.09 m transect spacing does not meet the data quality objective (DQO) in the Work Plan. ERT therefore proposes to collect data on transects in between the currently marked transects, resulting in a final transect spacing of 3.05 m (10 feet). The additional transects will be pin flag marked by ERT field personnel using the existing stakes placed by surveyors. Brush cutting will proceed on the new transects after they are flagged, and then EM31 data will be acquired on these newly installed transects.

The addition of these new transects should not affect the overall project schedule as ERT will be bringing in additional field staff to complete the work.

ERT will continue to coordinate closely with CENAB to ensure that all work is conducted in accordance with approved methods and agreements, and will document all discussions during the field work phase.

Please contact me if you have any questions or concerns with this revised approach.

MEMORANDUM

TO: Ana del R. Vergara, USACE-CESAS, Travis McCoun, USACE-CENAB, Thomas Colozza, USACE-CENAB, David King, USACE-CENAB, Chris Larson, USACE-CENAB

FROM: Jennifer Harlan

DATE: June 29, 2012

SUBJECT: Instrument Verification Strip at Fort Stewart, GA

ERT, under contract with the U.S. Army Corps of Engineers (USACE), Baltimore District, is performing a RCRA Facility Investigation (RFI) at Fort Stewart, Georgia. This memorandum addresses the Instrument Verification Strip (IVS) for the geophysical equipment being used in the Anti-Aircraft Range 90mm – 2 Munitions Response Site (MRS). The IVS is located adjacent to the Ammunition Supply Point (ASP) outside of the MRS.

A 50 m x 15 m test area was flagged for data collection on June 26, 2012. A mag and dig sweep of the area by UXO personnel was conducted first, and 82 scrap and MD items were recovered (Appendix A). The EM61-MK2A, integrated with a Topcon HiperGa RTK GPS, was used for data collection over this area in order to check for anomalies. Approximately 18 anomalies were found within the area covered, and a smaller area of 9 m x 25 m for the IVS was selected (Figure 1). Seven anomalies within the smaller area were excavated by UXO Technicians; these were aluminum and brass items that were not picked up by the instruments used during the map and dig operation. Once the anomalies were removed, the EM61-MK2A was used to verify clearance. The onsite USACE geophysicist verbally approved the pre-seed clearance.

Industry Standard Objects (ISOs) were utilized as seed items and buried at the depths/orientations designated by the design shown in Figure 7 of the Final Work Plan (Figure 4). The EM61-MK2A data were collected on the IVS on the background line and on the seed line 6 feet away (Figure 2). For the QC purpose (data repeatability), the two lines were surveyed a second time (Figure 3). The data were evaluated and the two data sets were very similar. The maximum differences between the two surveys are less than 10%. All of the seeds were detected on both passes.

A Georgia licensed surveyor captured the horizontal coordinates and depths of each seed item. Seed orientation and depths are summarized in Table 1.

Profiles of the two passes (mV vs. distance for each channel) for background line and seed line are shown in Figure 5. The data from Channel 2 are selected to present the maps and will be used for selecting the targets.

The IVS data were presented to the onsite USACE geophysicist on 26 June 2012 and approval was granted to proceed with data collection.

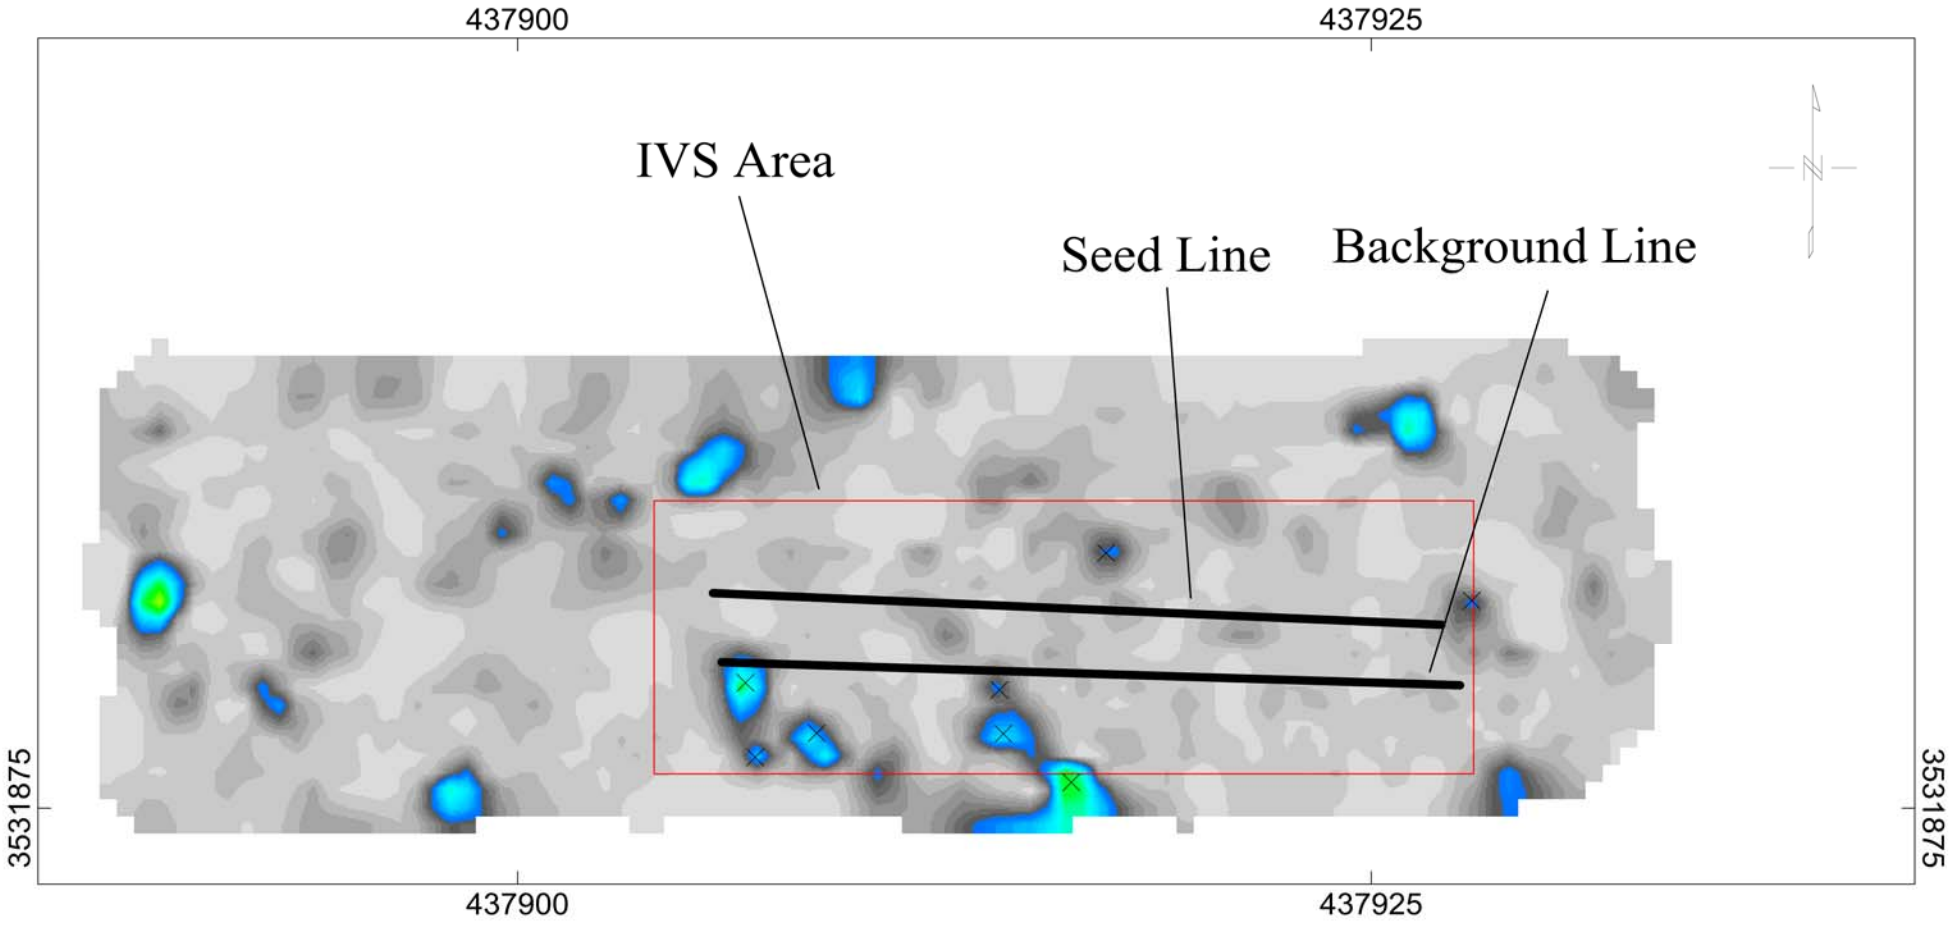

Table 1: Seed Items

Seed	ISO size	UTM Zone 17 N coordinates (m), center		Orientation	Direction	Seed depth (top) below ground surface (in)
		Easting	Northing			
1	Small	437924.168	3531880.858	Vertical	N/A	6
2	Small	437921.196	3531880.745	Horizontal	Across line	9
3	Medium	437918.071	3531881.108	Vertical	N/A	18
4	Medium	437911.924	3531881.068	Horizontal	Along line	18
5	Large	437915.106	3531880.953	Vertical	N/A	24

Profiles of the two passes (mV vs. distance for each channel) for background line and seed line are shown in Figure 5. The data from Channel 2 are selected to present the maps and will be used for selecting the targets.

The smallest MEC item recovered during previous investigations in this MRS was a 37mm high explosive round. The small ISO diameter is 33mm and was detected in the first pass of the survey with a peak value of 5.5 mV and the second pass with a peak value of 8.5 mV. The IVS background and noise values are 2 mV and 0.4 mV, respectfully. Given that this is a RFI to determine nature and extent of MEC and based on discussion with the onsite CENAB geophysical representative, an initial target threshold of **5 mV** is recommended for this investigation.

The EM61 ISO minimum response curves are shown in Figures 6-8, with actual responses plotted. All seed responses plotted above the theoretical minimum response calculated using EM61-MK2 Response v1.2.0.0 (NRL software).

TECHNICAL PROJECT PLANNING MEETING #2

MMRP RCRA Facility Investigation at
Anti-Aircraft Range 90mm – 2 MRS (FTSW-002-R-01) and
Hero Road Trench Area MRS (FTSW-008-R-01)
February 15, 2012

FINAL Meeting Summary

Attendees:

NAME	ORGANIZATION	EMAIL
Zsolt Haverland	USACE – Savannah	Zsolt.e.haverland@usace.army.mil
Travis McCoun	CENAB	Travis.mccoun@usace.army.mil
David King	CENAB	David.v.king@usace.army.mil
Jennifer Harlan	ERT	Jennifer.harlan@ertcorp.com
Neil Jones	ERT	neil.jones@ertcorp.com
Amy Rosenstein	ERT	envriskexpabr@aol.com
Algeana Stevenson	Ft. Stewart	algeana.stevenson@us.army.mil
Mary Ellen Maly	USAEC	Mary.e.maly.civ@mail.mil
Amy Potter	DNR-EPD	amy.potter@gaepd.org
William Powell	DNR-EPD	william.powell@gaepd.org
Mo Ghazi	EPD	mo.ghazi@gaepd.org

Action Items:

- ERT will update the figures for the Hero Road Trench Area MRS to show that DGM and random soil sampling will not occur in the small parking area.
- ERT will keep the Project Team informed of the schedule for distribution and review of the Test Pit Recommendation Memo.

Meeting Minutes:

Travis McCoun started the meeting by thanking everyone for attending this TPP #2 meeting and asked everyone to introduce themselves. He recapped that at the last meeting we talked about the general approach and data quality objectives; since then the Work Plan has been drafted and the Team has reviewed it. The goal of this meeting is to resolve any outstanding issues, review the technical approach, and come to a point where we can finalize the Work Plan and get out into the field. The approach with the TPP is to plan your work and work your plan; the objective is to make sure that no one is surprised by the results at the end of the investigation and no data gaps are left.

Jennifer Harlan asked if the GA EPD had a chance to review the Work Plan yet. They responded that they had not and they had received the work plan the week prior to the meeting (Friday February 3rd). Travis McCoun noted that normally the idea is to talk about the issues after Work Plan review and added that we will adjust based on this fact and go over the highlights of the Work Plan. Algeana Stevenson asked when the Installation received the Work Plan. Jennifer Harlan responded it was received on January 5th. Algeana Stevenson noted that it can be a week to 2 weeks to get the plans/reports through Installation review prior to mailing to GA EPD. Later in the meeting Algeana Stevenson noted that the Work Plan was mailed out on February 1st.

Jennifer Harlan reviewed the agenda and began going over the action items from TPP #1 (October 2010). (Action item in italics below).

- *ERT will distribute the GA EPD, Army and EPA guidance for risk assessments.* Complete.
- *Algeana Stevenson will work with installation personnel to determine if construction documents for the bunkers can be located. Complete. Related to the bunkers at the Anti-Aircraft Range 90mm – 2 MRS.* Construction drawings showing material was removed from borrow areas within the Installation and design drawings for the bunkers made of concrete and reinforced steel were found. This information has been included in the Work Plan.
- *Algeana Stevenson will attempt to find any reports on EOD finds at the ASP.* No EOD records could be found related to historical EOD calls.
- *ERT will attempt to determine the target areas and insert them on the present maps of the Fort Stewart range fans.* ERT could not find any information specific to Ft. Stewart, but were above to find "typical" general range information, which we will review later on in this meeting.

Jennifer Harlan reviewed the maps of the locations of the MRSs being investigated. She reviewed the historical ranges that overlap the Anti-Aircraft Range 90-mm – 2 MRS (AAR). By reviewing general historical information ERT determined that targets used for anti-aircraft were either balloons towed behind planes or some other type of target in the air. Therefore, everything was random and there were no set impact areas. For the tank ranges, targets were also moving so again there is no set impact area. There are safety danger zones on the sides of all ranges; based on the historical information this MRS appears to be located only in the safety danger zones for the overlapping historical ranges.

Jennifer Harlan reviewed the conceptual site model (CSM) for the AAR and noted it is an active ammunition supply point (ASP). The site is 77 acres and is surrounding by heavily wooded undeveloped operational range. The AAR was developed using fill material from borrow areas within Ft. Stewart. The potential future land use is assumed to be the same as current use and the MRS does not contain any firing points, target zones, or impact areas. MEC is not expected on the surface as the area is maintained and regularly mowed.

For the AAR geophysical investigation, UXO Estimator was used to determine the area to be investigated. Per TPP #1 discussions, structures, roads and parking areas were excluded from the investigation area. The digital geophysical mapping (DGM) will cover approximately 5.56 acres or 9.78% of investigation area. Virtual Sampling Plan (VSP) was used to determine random grid locations. In addition, ERT added in an additional 13,630 linear feet of transects based on TPP #1 request in order to

have coverage between the bunkers. An instrument verification strip (IVS) with industry standard objects (ISO) will be installed just outside the MRS. An IVS simulates site- and MEC-specific items and is used to confirm equipment is working and giving a consistent response. A check over the IVS with the equipment is conducted at the beginning and end of each day. Blind seeding will be conducted in this MRS. One item will be placed in every survey grid and per every 10,000 linear feet of transect, which ensures that at least 1 blind seed is encountered on every day of DGM activities. The EM61 will be utilized for DGM. All targets above the target threshold based on DGM will be intrusively investigated; the threshold is based on IVS and background responses. All items will be catalogued and disposed of properly.

Jennifer Harlan reviewed the map showing the DGM locations for the AAR. Some of square grids were changed to rectangles so that we could fit them between the fence line and MRS boundary. Neil Jones noted that there are some internal fences within the AAR and therefore some of the grids may be adjusted based on field observations/conditions. Amy Potter asked if the fence created any kind of interference. Neil noted that within 5 feet of the fence the data would not be useful. Transects will be conducted between the bunkers, but we will not be doing any DGM on top of the bunkers based on their reinforced steel construction.

For the MC investigation, there will be 10 randomly (determined by VSP) placed surface, defined as 0-12 inches, and 10 subsurface, defined as 12-24 inches soil samples; sampling locations will be co-located. Additional biased samples will be collected if we find MEC that looks like it has been breached or there is evidence of soil staining; these will be collected on an as needed basis. Amy Rosenstein asked what intervals the GA EPD normally used for surface samples. Amy Potter responded that everything between 0-12 inches is defined as surface; everything below is subsurface. Samples will be analyzed for explosives and 4 metals: aluminum, copper, lead, and zinc. The selected metals are based on subset of TAL metals and are described in the MC Memo included as Appendix H of the Work Plan. The Munitions Items Disposition Action System (MIDAS) was used to identify any MC over 1% of the munitions calculated weight based on what we expected could have been used within the AAR. Travis McCoun noted that a difference between other MMRP projects and this one is that usually we have to confirm a release has occurred prior to conducting MC sampling; this is different as we are following the recommendations of the SI to conduct a RFI for MC. Travis McCoun questioned if there was a good database available so that naturally occurring metal levels would not be a concern. Jennifer Harlan noted that there is a background dataset for Ft. Stewart based on all the SWMU work; however, the only metal included in this dataset is lead. ERT will be collecting 10 background samples and analyzing for aluminum, copper, and zinc. We will be utilizing the same SWMU locations used for the existing background dataset and coordinating sampling locations with Algeana Stevenson.

Amy Potter asked which munitions were used. Neil Jones noted that the stuff that has been found may not be exactly what was used; Jennifer Harlan added that Table 1.1 of the Work Plan includes a list of what we based the MIDAS search on. Appendix H of the Work Plan provides detailed information including all MIDAS information gathered on each munition item investigated. Travis McCoun noted that the MRS is highly reworked. Jennifer Harlan stated that the rationale for depth interval sampling is based on risk assessment. Amy Rosenstein added that surface soil will be looked at for human contact,

and the subsurface is classified as 12-24 inches below ground surface and not deeper because future use is expected to remain the same so any excavation is expected to be minor.

Mary Ellen Maly asked if the surrounding area is swampy. Neil Jones replied there are areas nearby that are swampy, but the area immediately surrounding the ASP does not appear to be. Algeana Stevenson noted that there is a high percentage of wetland at Ft. Stewart and this area may have been wetland prior to being filled over 30 years ago. Jennifer Harlan stated if we have to do a blow in place, we will do incremental sampling that will include placing a grid approximately 100 x 100 feet and compositing the sample from that area. Based on the TPP #1 meeting discussion related to groundwater sampling and the location of the MRS surrounded by operational range, ERT will review the soil sampling results before determining if groundwater wells should be installed. Amy Potter asked what the depth to groundwater was in this area. Algeana Stevenson replied it was the same as across all of Ft. Stewart, which is 3-6 feet during a non-drought year and 6-10 feet during a drought year.

Will Powell asked if there were any drainage swales around the MRS. Neil Jones replied yes a few were seen during the site visit the day before. Travis McCoun reminded everyone these were manicured grounds. Will Powell asked if the swales were draining off the site. Neil Jones noted that the swales are only a few inches deep and the topography of the site is relatively flat, with the exception of the bunkers. Will Powell asked if there was anything on the inside of the fence line. Jennifer Harlan noted that ERT did not go into the MRS due to the security of the site. Jennifer Harlan mentioned that ERT had talked to the folks overseeing the ASP to let them know they were looking at the site and added that there will be a significant amount of coordination as there are exclusion zones for the ASP when gathering munitions in addition to the exclusion zones related to the intrusive investigation work. Neither Neil Jones or Jennifer Harlan thought there was any standing water within the MRS based on the site visit and aerial photos. Algeana Stevenson agreed that she hadn't ever seen any water at the site either. Mary Ellen Maly asked that if there is a drainage ditch with standing water within the MRS does that change GA EPD's opinion. Will Powell replied yes, they would want samples from that area. Amy Potter clarified that they would want a sediment sample from any wet drainage ditches.

No one had any questions related to the AAR approach. Everyone agreed that the plan looked good and that the coverage, specifically over 10% of the AAR with DGM, would provide good statistically based information.

Jennifer Harlan then reviewed the approach for the Hero Road Trench Area MRS (HTRA). The CSM for this MRS notes that the site is 34.5 acres in size with most of the area fenced. The property is undeveloped with a small parking area (not fenced) in the southern portion of the MRS. No potential future land use has been identified. The reason for the investigation is that there is ancillary information that dilute agent CAIS kits were buried in this MRS at no more than 10 feet below ground surface. Will Powell asked what the size of the CAIS kits were. Neil Jones responded it depends on if they were in a PIG or were individual kits. If they were individual kits these are no larger than a coffee can with individual glass vials. A pig is similar in size to a beer keg, although not as round. Travis McCoun added that CAIS kits were either dilute agents or vials used to train soldiers in the field as to how different gases smell. A very small number of CAIS kits actually contained dilute agent; the Army has accounted for all of these kits. As part of the technical approach, the Corps did a Probability Assessment to determine if

there was a risk or potential for the chemical warfare CAIS kits; the Probability Assessment determined the potential was low. He added, if in fact there were CAIS kits how do you do a geophysical investigation for something that has a low probability of being there especially something that is glass vials. Travis McCoun added another challenge is that anything that is classified as chemical warfare material requires additional resources. The Department of Defense has issued a policy that all CAIS kits with exception of the 100,000 already accounted for are not considered chemical warfare material.

Travis McCoun noted that the technical approach includes field observations, looking for broken vials, etc and added that degradation products will probably not be found due to mineralization. Neil Jones added the instrumentation selected for this investigation (EM31) has the potential to detect disturbed soils/changes in ground conductivity not related to metal presences. He added that there are metals at the site based on our site walk and the responses from those items may drown out the lower level non-metal responses. Will Powell asked what the danger in the dilute agent CAIS kits was. Travis McCoun replied nothing in the individual one; he added that in the field these are usually remediated by sticking them in a bucket of water. If there is any evidence of CAIS kit in the field, ERT will immediately stop work, backfill the excavation, and fall back and re-group to determine the path forward. Again the technical approach is based on the low probability of finding these kits. If there is any evidence the Corps will reevaluate the situation and update the Probability Assessment with the new data and get Huntsville involved to undertake a more robust investigation. Mary Ellen Maly asked what kind of debris was in the MRS. Neil Jones replied that there was various debris, such as radial tires, chunks of concrete, etc. Algeana Stevenson added that ground penetrating radar (GPR) of the area was previously done (about 8 or 9 years ago) and there were so many anomalies it was hard to determine what had transpired at the site. Neil Jones noted that GPR does detect tree trunks so it might not have been best instrument to use as the MRS is wooded. Travis McCoun noted that there is a good possibility that we will find HTRW materials at site (dunnage, concrete, etc.). In the event that ERT runs across it, they will do their best to determine what it is and then refer the site to the IRP. Jennifer Harlan reminded everyone this is not a MEC site, it's being investigated for MC only. As no historical ranges overlap this MRS, there is no maximum probability penetration depth and no MEC is expected to be found in this area.

Jennifer Harlan pointed out an area where there may be ground disturbances based on historical photos from the timeframe burial would have occurred. ERT will coordinate the results of the DGM with this information to see if there is an overlap in possible trenches and DGM results for ground disturbances. Jennifer Harlan noted that there is the parking area outside of the fenced area and that originally the plan was to do DGM using the EM31 on the whole MRS, but there doesn't appear to be a reason to do DGM on this area due to the gravel and the fact that it is used on a daily basis. Everyone agreed it was okay not to do DGM on this area.

Geophysical investigation at this MRS will be conducted using the EM31 with 15 foot line spacing. Brush removal will be conducted in order to use the robotic total station (RTS) navigation system that uses line of sight. Neil Jones noted that if there is an issue with RTS related to the vegetation/trees in the MRS that as a backup we may want to use line and fiducial. David King agreed and noted it was good to have a back-up plan. There will not be blind seeds in this MRS as we are not looking for individual anomalies. There will be an IVS with ISOs to check equipment daily. Once we get the DGM data back ERT will develop a Test Pit Recommendation Memo that will detail what we found and where we want to

dig. This will be sent out to the team for approval, and as we will already be out in the field we will need a quick turnaround. If we need to we will have a conference call/meeting to discuss the memo and get approval. Algeana Stevenson asked the GA EPD if, for this particular action, is it okay to just do an email correspondence. Amy Potter agreed that this would work in order to move things along and asked that they be kept in the loop for when the memo is coming and when approval/review is needed. Jennifer Harlan agreed.

Once the location of the pits/trenches is determined the initial plan is to hand dig the trenches. There is the possibility that we need to go more than 4 feet deep (will depend on location of groundwater, etc.) and ERT will bring in mechanical equipment to finish the excavation. If mechanical equipment is used, ERT will use skilled UXO techs for operation so there should not be a safety issue (these personnel use mechanical equipment to dig for bombs regularly). If we find CAIS kits we will backfill the hole, establish an exclusion zone, and coordinate with CENAB. Travis McCoun noted that ERT needs to be very specific on the things that we pull out of the ground; if MD, determine what kind and what type of munitions these are related to. Photos will be taken of the entire operation. Algeana Stevenson stated that for this site the preference is not to have land use controls at the end of this process; the MRS is adjacent to an elementary school.

The MC investigation associated with this MRS includes the collection of biased soil samples from each pit; the surface sample will be collected from the top 12 inches, while the subsurface sample will be collected from 1 foot to the bottom of the trench. The bottom of the trench will be 10 feet bgs or groundwater. Sixteen additional biased soil sampling locations will be determined based on the DGM results. Ten random surface and subsurface samples (co-located) as determined by VSP will also be collected. Analyzing for dilute agent CAIS kits degradation products: arsenic, 1,4 dithiane, 1,4-oxanthiane, and thiodiglycol.

Mary Ellen Maly asked what happens when you find HTRW – will you collect any samples? Travis McCoun replied that this project is under the MMRP program and therefore the scope only includes MEC and MC identification. If we find something unusual, ERT will collect samples to determine what the material is and then make proper notifications to Corps. ERT is not responsible for characterizing the nature and extent of HTRW. ERT will coordinate with Corps if something is found; the Corps will then work with AEC to determine the next steps.

Jennifer Harlan stated that the determination for the need to do groundwater wells will be based on review of the soil sampling results. Amy Potter noted that the GA EPD usually does this type of phased approach on RFIs and they are in agreement with this approach. Will Powell asked if the current figure for random sampling locations includes one in the parking lot. Jennifer Harlan replied yes, but based on this meeting ERT will update that figure.

Jennifer Harlan then turned the meeting over to Amy Rosenstein to review the risk assessment portion of the project. The risk assessment will follow the GA EPD guidelines from 1996; Amy Rosenstein did verify with GA EPD that this is the most recent version. It is limited on its direction for a human health risk assessment (HHRA) and more detailed for the ecological risk assessment. For the HHRA USEPA guidelines are generally accepted and used. The first step is to screen the chemicals for exceedances of

screening levels and look at any potential impacts to groundwater based on groundwater screening levels. The background information used for development of the risk assessment approach includes: secure facility, both MRSs are fenced; and future use will be the same as current use, except construction may occur at HRTA. Therefore it is more important to look at soil at depth at HRTA due to unknowns about future use. Receptors include workers, visitors and trespassers; trespassers are unlikely but are always added to the risk assessment. Mary Ellen Maly asked Algeana Stevenson if they were looking at having HRTA being an unrestricted site. Algeana Stevenson agreed with this statement as the MRS is in the cantonment area with a school and residential area nearby and this is prime property. ERT will need to revise the approach for HRTA to screen against residential numbers rather than industrial. The risk assessment for the AAR will be done as presented. Amy Rosenstein noted the GA EPD always uses residential to screen. This doesn't mean that you will have to clean up to residential numbers, but screen to this level as it is the most conservative. ERT will add in residential receptors for HRTA.

Amy Rosenstein noted that for the SLERA we will screen using EPA Region IV ecological screening levels and FTSW SWMU background dataset. Receptors are typical and ERT will do a search for endangered species or species of concern. For AAR if screening levels are exceeded ERT will go with a qualitative discussion because the MRS is a well developed area with grass that is mowed regularly and therefore is not good ecological habitat. The HRTA currently is forested and it provides good ecological habitat; if screening levels are exceeded would go to a quantitative risk assessment. If warranted, ERT will recommend a more detailed ecological risk assessment if the concentrations are significantly above the screening levels or there are species of concern. Jennifer Harlan added that a MEC hazard assessment will be conducted for the AAR only.

Mary Ellen Maly asked if we had screening levels for all of the parameters being looked at. Will Powell noted that if there isn't a screening criteria it automatically gets carried forward to the risk assessment. Amy Rosenstein noted that she has some experience with this, and other states as well as the Department of Defense (DoD) may have additional values. We would ensure GA EPD agrees with using these prior to completing the risk assessment. She added that some of these parameters do not have toxicity values. Amy Potter noted that you cannot use a surrogate for screening, but it can be used for toxicity. She added if a parameter doesn't have a screening value it goes into the risk assessment and that if we need help with any of the values to let her know and they will put us in contact with the right folks at GA EPD.

Travis McCoun noted if we don't see any of the compounds associated with the munitions then we wouldn't take the data into the risk assessment; this would be part of the CSM to support how to move forward. He noted this is more of a presence or absence situation. For example, if we find thiodiglycol we are going to know it's from CAIS and move forward to next step. Amy Potter noted if there are DoD screening values, ERT should provide them to GA EPD to review and they can use this information in the future. Amy Rosenstein stated that the current Work Plan does not include screening levels, once it is determined what chemicals are found we would then determine how to move forward in terms of finding additional screening levels or toxicity values.

Jennifer Harlan reviewed the schedule and noted the Work Plan needs review by the GA EPD, ERT will do a response to comments and then finalize the Work Plan. Current plan is to get out in the field by May which would have us finished by July (7-8 weeks). The Work Plan has a detailed field schedule in

Appendix E (QAPP). The RFI Report would then be ready for regulatory review in December 2012 followed by a TPP meeting to discuss the results/report in February 2013. Jennifer asked when the GA EPD thought they might be able to provide comments. Algeana Stevenson noted usually the State has 45-60 days for review of a document. Amy Potter noted they have a few things ahead of this Plan for review; they will get back to Algeana Stevenson with a timeframe as they are booked for the next 2-3 weeks. Algeana Stevenson added that the plan has already been reviewed by the Baltimore Corps, as well as the Installation and AEC. She added that for a Work Plan, the contractor can proceed at their own risk while the GA EPD is reviewing. The GA EPD can always come back and ask for additional sampling/analysis. Algeana Stevenson added that Work Plans are not a required State buy-off before field work begins. Algeana Stevenson asked if ERT was going to work on both sites at the same time. Jennifer Harlan responded that no, we will do some phased work and move back and forth between sites as needed based on what is going on. GA EPD noted that the plan does cover everything discussed at the last meeting and there does not seem to be any show stoppers or concerns based on this meeting.

Mary Ellen Maly asked how much coordination ERT has done with the staff running the ASP. Jennifer Harlan and Neil Jones responded that ERT talked to them the day before and that we will need to coordinate with them very closely as they will have exclusion zones when they have to remove munitions from the bunkers. ERT will also have exclusion zones when conducting the intrusive investigations. Everything will be coordinated through Algeana Stevenson; Algeana Stevenson noted Jimmie McGowen will be the POC for ERT and will assist with coordination. She noted ERT should send Jimmie McGowen and Dale Kiefer emails related to access stuff. Jennifer Harlan noted that Mr. Walker (who oversees ASP) noted he would need a rooster from ERT and ERT will also forward equipment frequencies to him. Algeana Stevenson noted it would be best to draft a letter to him to cover potential timelines, how we are going to approach the investigation, etc. Travis McCoun noted a Baltimore District OESS will be on site and they are former EOD guys who will work with everyone to minimize disruptions to regular activities.

After it was determined there were no additional questions or concerns related to the presented information, Jennifer Harlan thanked everyone for their participation and closed the meeting.

FORT STEWART

TECHNICAL PROJECT PLANNING MEETING #1

MMRP RCRA FACILITY INVESTIGATION

ANTI-AIRCRAFT RANGE (90mm - 2) AND HERO ROAD TRENCH

October 13, 2010

FINAL Meeting Summary

Attendees:

NAME	ORGANIZATION	EMAIL
Ana del R. Vergara	USACE – Savannah	Ana.delr.vergara@usace.army.mil
Zsolt Haverland	USACE – Savannah	Zsolt.e.haverland@usace.army.mil
Travis McCoun	CENAB	Travis.mccoun@usace.army.mil
Debbie McKinley	CENAB	Deborah.k.mckinley@usace.army.mil
David King	CENAB	David.v.king@usace.army.mil
Ira May	ERT	Ira.may@ertcorp.com
Jennifer Harlan (Phone)	ERT	Jennifer.harlan@ertcorp.com
Neil Jones	ERT	neil.jones@ertcorp.com
Amy Rosenstein (Phone)	ERT	envriskexpabr@aol.com
Algeana Stevenson (Phone)	Ft. Stewart	algeana.stevenson@us.army.mil
Amy Potter	DNR-EPD	amy.potter@dnr.state.ga.us
William Powell	DNR-EPD	william.powell@dnr.state.ga.us
Mo Ghazi	EPD	mo.ghazi@gaepd.org

Action Items:

- ERT will distribute the GA EPD, Army and EPA guidance for risk assessments.
- Algeana Stevenson will work with installation personnel to determine if construction documents for the bunkers can be located.
- Algeana Stevenson will attempt to find any reports on EOD finds at the ASP.
- ERT will attempt to determine the target areas and insert them on the present maps of the Fort Stewart range fans.

Meeting Minutes:

Travis McCoun welcomed everyone to the meeting and stated that this was the first Technical Project Planning (TPP) for the Fort Stewart RCRA Facility Investigation (RFI). Travis McCoun noted that this project would be following RCRA guidelines, rather than CERCLA. He noted that the purpose of TPP is to engage everyone early on, understand the goals of the project and the questions that are being asked, and determine the data needed. The goal of the TPP is to come to a conclusion that answers all the questions and that everyone can agree on; this information will then be used to make decisions on the next steps. He then requested that everyone introduce themselves. After introductions he explained that the USACE group is a Project Delivery Team (PDT) and that while Ana del R. Vergara from the Savannah District is the Project Manager, the Baltimore District is assisting with the technical aspect of the project. Travis McCoun noted that this is primarily a geophysical project and that the overall goal is to have a concerted team effort from everyone in order to appropriately characterize the sites and take the right follow-up actions.

Travis McCoun reviewed the important terminology. He noted that ERT has a performance based contract with the object to complete an Army and regulator approved RFI that characterizes the nature and extent of any MMRP constituents. He also stated that munitions debris (MD) are the remnants that remain after munitions are used. Munitions and explosives of concern (MEC) are items with an explosive safety hazard that can cause immediate harm. These include items that were fired, but did not go off. Material potentially presenting an explosive hazard (MPPEH) are pieces of ordnance or items that potentially have an explosive hazard, but this is not known for sure. He noted that munitions constituents (MC) are the chemical components of what goes into an item to make it function and that there is no explosive safety hazard associated with the chemical component of MC.

Travis McCoun reviewed the MMRP and stated that it was established by the Department of Defense (DoD) in 2001 under the Defense Environmental Restoration Program (DERP) to address sites with MEC. With the MMRP, the DoD established a requirement to identify all locations other than operational ranges requiring a military munitions response, specifically Closed, Transferring and Transferred (CTT) ranges. Again he noted that while the MMRP program usually follows CERCLA guidelines, this project will be conducted under RCRA.

Travis McCoun noted that this project would primarily have visual and geophysical surveys and that the major outputs would include a revised conceptual site model (CSM), a MEC hazard assessment (HA) and a MC risk assessment (RA). He noted that a MEC HA is different from a RA due to the acute risk associated with an explosive safety hazard.

Travis McCoun then reviewed the TPP process, which includes developing data quality objectives (DQO) for the project and getting input from the group before the work plan is developed. He stated that the DQOs are used to identify and understand the project, to determine data needs and the quality of the data, and identify what the best data collection options are. The field sampling program is then finalized to support the DQOs. Once the work plans are drafted, they are distributed and reviewed and the second TPP meeting is held to discuss the comments and agree on resolutions. Once the work plan is finalized, the field work is conducted and the draft RFI is developed and distributed. At the third TPP meeting, everyone discusses the draft RFI and comes to an agreement on the content. The Corps' contractors usually develop draft work documents, which are only reviewed by the Corps and Army. A draft final is distributed for all the stakeholders to review and then the final is prepared and is considered the document of record. Algeana Stevenson noted that they usually have a draft report reviewed by the installation and then the final report is submitted to the stakeholders. If there are comments on the final report, a revised final report is developed. Travis McCoun noted that an agreement on report terminology would be developed, but that the important thing to note was that nothing leaves the Corps until it is peer reviewed.

Travis McCoun then reviewed the seven DQO steps and noted the goal was for everyone to be in agreement with the work plan (tools, questions asking, etc.). He then reviewed the site history and previous investigations. He noted that Ft. Stewart is the largest army installation east of the Mississippi River and that it has been used since the 1940s to train soldiers. The 2003 CTT report was a crude assemblage of data collection based on a request for information sent to the installations. AEC then hired contractors to conduct the Historical Records Review (HRR) and Confirmatory Sampling (CS) Study. The HRR identified 7 MRSs for CS, while the 2007 CS provided a rough evaluation of the sites and 2 MRSs were identified for further evaluation, the Anti-Aircraft Range 90 mm - 2 and the Hero Road Trench Area. He then noted that slide 14 shows the location of these MRSs. The Anti-Aircraft Range 90 mm – 2 MRS was recommended for MEC and MC investigations, while the Hero Road Trench Area was recommended for a MC investigation only.

Travis McCoun then reviewed the Anti-Aircraft Range 90 mm – 2 site map and historical range information. The current MRS boundary shown in the presentation is the boundary as we currently know it from the HRR and CS. The area functions as an ammunition supply point (ASP). Typically an ASP stays in an operational range, but in this case it was removed and is now an MRS. Some MEC was found during construction of the ASP bunkers. The historical range map provides some information on the activities that were occurring in this MRS and what MEC could possibly be found. Neil Jones noted that the MRS is not within the firing points or target point for any of the historical ranges that overlap it. Travis McCoun added that the MRS falls within the intermediate area or safety danger zone where rounds can fall short, etc. He also noted that there was heavy construction within this area and things have been moved around.

William Powell inquired about how targets were set up and stated that he would like to see where the impact/target areas were on the maps. The group replied that there were probably drums to fire on or a target could have been pulled by an aircraft. Everyone agreed that it was hard to determine exactly what occurred on these ranges. Debbie McKinley added that there are manuals that show typical range areas for types of ranges and these could be used to assist with determining the firing and target/impact areas. Travis McCoun noted the CS report had a preliminary CSM as its stopping point, which is the starting point for this RFI. ERT will figure out if there is additional information and will refine the CSM. Travis McCoun also noted that any MRS that has MEC or previously had MEC will have some kind of land use controls on the MRS forever.

Mo Ghazi asked if more than 2 sites were recommended for RFI. Algeana Stevenson responded that the Small Arms Range 2 will be addressed in a separate RFI. The Small Arms Range 2 MRS is currently undergoing an expanded HRR. Travis McCoun added that it was not ready to move forward with these 2 MRSs that are being discussed today, but an RFI for the Small Arms Range 2 MRS will be initiated in the future.

Travis McCoun reviewed the CSM for the Anti-Aircraft Range 90 mm – 2 and noted that it is a 77-acre site with 42 buildings and is an ASP. The operational area surrounding this MRS is undeveloped and heavily wooded. The MRS was originally part of the operational range and was then developed and turned into an ASP. Construction of the building began in the 1970's; the last 10 buildings were constructed in the mid-1990s. The assumption for this site is that any MEC is primarily in the subsurface as regular mowing/maintenance has been occurring throughout this MRS. Mo Ghazi asked if the MRS boundary matched the fence line. Travis McCoun responded that the boundaries are as shown on slides 16 and 23, and that it is not entirely matched up with the fence. Travis McCoun added that different groups in the Army keep different types of records and that we are using the boundary as we understand it from the CS report, but are trying to verify that G3 agrees with this boundary. If G3 wants the boundary to be the fence line, we will coordinate this change with the group.

Ira May began reviewing the DQOs for the geophysical investigation at the Anti-Aircraft Range 90 mm – 2. It was noted that for numbers 5 and 7 on the slide, 1 MEC/acre should be 0.5 MEC/acre. He stated that an EM61 would be used for this site to locate anomalies and that the boundary of this MRS is limited to the other than operational range area. Travis McCoun added that there have only been a handful of items found and that these were not items known to have been historically used at the site. Therefore, it can be assumed that MEC is not prevalent and that a conservative approach is needed. William Powell inquired about the amount of disturbance during construction and how much things may have been moved around, and expressed concern that the assumption that the subsurface distribution of MEC, if present, may not be homogeneous due to earth moving activities. Algeana Stevenson responded that they had

looked through the records for construction dates, but didn't look for plans or blueprints. She noted that they could go back and look for drawings showing the depth of disturbance. Ira May noted that this conservative approach is based on a worst-case scenario of what we currently know and if we get additional information, such as the construction information, we can update the approach. William Powell noted this seemed to be the best solution and Ira May agreed. Neil Jones added that if less MEC per acre (0.5 versus 1.0) are assumed then more data is actually collected. Travis McCoun noted that there is a statistical evaluation that goes into the planning to ensure that the areas investigated can be correlated back to the rest of the MRS. William Powell noted that this approach assumes the area is homogenous, which is not the case due to all the construction that has occurred. Neil Jones agreed, but noted there were no other tools available to set up the approach as there is no target area, firing zone or disposal area. Travis McCoun added that the Corps reviewed this approach with ERT and are in agreement based on what we know about the MRS.

Ira May then reviewed the geophysical investigation approach. UXO Estimator was used to determine the acreage to be investigated and then VSP was used to determine the random center points for the 100 x 100 foot grids. Each grid will have 100% survey coverage, meaning that there will be no space between the survey lanes. Discussions occurred about the locations of the grids and roads and everyone was in agreement that the roads should be removed from the investigation area, as the parking lots were. William Powell noted that none of the grids were located in the areas of the bunkers. Discussions transpired that noted that the 100 x 100 foot grids could not be fit between the bunkers and due to the construction of the bunkers with reinforced concrete, it would be almost impossible to get any data from any geophysical investigations around or on the bunkers. It was noted that biased transects could be added that went between the bunkers north to south. Travis McCoun stated that when developing the work plan, the end state should be considered. Based on previous EOD calls this MRS will have at least a land use control, if not some other type of action and that it was extremely unlikely that the bunkers would be dug up if something were found. Therefore, he asked if it was necessary to conduct transects between the buildings, based on what the end state will be. William Powell replied that he was more concerned about the "hills" on the sides of the bunkers. Neil Jones acknowledged that if surveys were done near the bunkers the instrumentation would not be able to pick out small metal objects. William Powell was concerned about the safety of grounds maintenance personnel. Agreement was made that the work plan should address if these areas can be surveyed effectively and if not, why.

Ira May stated that the DGM survey would be conducted using EM61, that brush removal was not needed and that there is an assumption that surface clearance is not needed due to the regular mowing of this MRS. The geophysical system verification (GSV) will be used for quality control. Neil Jones added that the RTS navigation system would also be used on this project. In responding to a question Neil Jones noted the EM61 survey area is 1 meter wide. Ira May stated

that based on the size of the area to be investigated (5.6 acres total), ERT is estimating 280 total anomalies based on an estimate of 50 anomalies per acre. He added that this estimated number is high and a worst-case scenario based on the historical site usage. In response to a question, Neil Jones noted that ERT was using GSV vs. a GPO. With GVS the instrument verification strip is checked two times a day vs. just once with the GPO. In addition, blind seed items will be placed within the investigation areas by an outside contractor.

Ira May then reviewed the DQOs and proposed plan for the environmental sampling in the Anti-Aircraft Range 90 mm – 2. He noted that the MC investigation includes collecting 10 biased soil samples based on MEC finds with a potential for release; an additional 21 random samples (determined by VSP) will be collected for risk assessments. All soil samples will be collected as discrete samples for the risk assessment, unless a blow-in-place (BIP) is required; if BIP is needed, multi-incremental sampling will be conducted. The current metals list included in the presentation is based on the CS report and will be updated based on the results of the MIDAS database investigation. Ira May noted that the biased samples will not be collected if no MEC with the potential for release are found. Travis McCoun stated that the usual rationale to conduct MC sampling is that first a demonstration of MEC release is needed and then MC sampling is conducted based off of that release. He's concerned that if there were no MEC, then sampling would be conducted just to collect samples. He feels a decision matrix is needed for the work plan that details that MC sampling will be conducted if MEC is found. Additionally, this matrix would determine how to justify the number of samples. For instance if only 1 MEC item is found in the 66 acre investigation area, how many soil samples are needed to characterize the area? Travis McCoun added that there could be a stepped/phased approach for the MC sampling based on the geophysical investigation finds. Neil Jones responded to a question regarding the depth of the sub-surface samples by stating that the samples will be collected just above the groundwater, which ERT has been told is 3-6 feet. Algeana Stevenson noted that the groundwater can fluctuate significantly and could be lower during a dry season. Everyone agreed that the groundwater depth will be unknown until the investigation is conducted. After some discussions regarding if soil sampling for MC was necessary depending on the geophysical investigations, William Powell noted that the soil samples are necessary to reinforce the conclusion of whether or not there are any concerns/issues. Debbie McKinley noted that the list of metals will determined with the MC memo and that metals in small amounts in the munitions should not be included in the analyte list. Amy Potter noted that if the metal is not considered hazardous, then it should not be included on the analyte list. She also stated that EPD would review the metal analyte list as part of the work plan review.

Ira May went on to discuss the groundwater investigation, which will only be conducted if the soil sampling results warrant additional investigations. Initially 4 piezometers would be installed to determine the groundwater flow direction and then 5 temporary wells will be installed for the sampling. If groundwater sampling is needed the groundwater would be analyzed for the same

parameters as the soil. Travis McCoun noted that this is a small area surrounding by operational range and if groundwater sampling was conducted and contamination was noted, how could it be attributed to this MRS and not the operational range. Amy Potter agreed and noted that there is a problem with the location of this site and that there would be no way to clean up the groundwater.

Ira May began to review the Hero Road Trench Area and noted that no historical ranges overlap this MRS. The site is 34.5 acres with 31 acres enclosed within a fence. No potential future land use has been identified. There is ancillary information that CAIS kits may have been buried in this area. No MEC is expected to be found since no explosives were fired in this area. Travis McCoun added that this investigation is based off of anecdotal information from a former DPW employee. Ira May stated that there are some historical photos that show possible areas of disturbance, but no one is sure what those disturbances were. Mo Ghazi asked if there was an erosion issue at this site. Algeana Stevenson noted that there is some surface water runoff in a small area that was noted in one of the previous reports. Ira May reviewed the geophysical investigation program which includes using an EM31 to identify large scale ground disturbances over the entire MRS. Neil Jones explained that the EM31 is carried and covers a much larger footprint than the EM61, but cannot locate small (MEC sized) individual items. Travis McCoun noted that the instrument is used to look for subsurface disturbances. Ira May noted that based on the prior days site visit, the vegetation is much more dense than expected and brush clearing will be needed. Ira May noted that the plans call for hand excavation, but everyone agreed that mechanical excavation might be needed depending on the depth of the trenches being dug. Again, the depth of the trenches will depend on field observations and the water table.

Ira May reviewed the MC investigations, which include the collection of 2 samples from each trench, an additional 16 soil samples based on the distribution of DGM anomalies and 21 random (VSP determined) samples. Discrete samples will be collected when possible. He then noted that the samples will be analyzed for the detectable agent breakdown products of the chemicals associated with the CAIS kits. William Powell asked what was in the CAIS kits and Neil Jones responded that they contained lewisite, mustard agent, phosgene, and chloropicrin.

Ira May went on to explain that in the worst-case scenario, groundwater sampling would be conducted if the soil sampling results warranted additional investigation. Similar to the Anti-Aircraft Range 90 mm – 2 site, the groundwater flow direction would be determined and then a total of 11 temporary wells (1 upstream and 10 downstream) would be installed around the MRS. Amy Potter noted that if groundwater sampling was needed, 10 wells might not be necessary. Ira May agreed and stated that the number of wells depended on the groundwater flow direction determination.

Ira May stated that the Ft. Stewart RFI will refine the CSM, include a MEC HA, if MEC is found, make boundary recommendations for the Hero Road Trench Area, and have results for a baseline human health RA and a screening level ecological RA. Amy Potter noted that there was guidance available from GA EPD for the ecological RA. Travis noted that both the Army and EPA have recently completed guidance for munitions work and risk assessments. Amy Rosenstein noted that it would be good for all of these documents to be distributed to the group.

The schedule was reviewed and it was noted that this was just an estimate and could change significantly. If all goes according to the schedule, the draft final work plan would be distributed to the stakeholders in April 2011. Travis McCoun added that the Army is looking to put temporary land use controls in place for all of the MRSs until the RI/RFIs are completed. He inquired about the normal review time that the EPD would need on documents. Amy Potter noted it depending on what was going on at the time, but that 45-60 days could be used for planning purposes.

Travis McCoun then closed the meeting by thanking everyone for their participation.

MEMORANDUM

TO: Ana del R. Vergara, USACE-CESAS; Travis McCoun, USACE-CENAB; David King, USACE-CENAB; Thomas Colozza, USACE-CENAB; Chris Larson, USACE-CENAB; Debbie McKinley, USACE-CENAB; Eddie Lawhorn, USACE-CENAB; Elbert Caraballo, USACE-CENAB; Jeff Brewer, USACE-CENAB; Mary Ellen Maly, USAEC; Algeana Stevenson, FTSW; Zsolt Haverland, USACE-CESAS; Amy Potter, GAEPD; William Powell, GAEPD; Mo Ghazi, GAEPD

FROM: Jennifer Harlan, James Stuby, Neil Jones, and Lauren Franke (ERT)

DATE: 27 July 2012

SUBJECT: **Final** Hero Road Trench Area MRS Test Pit Memo

1. As part of the ongoing field investigations for the Fort Stewart (FTSW) RCRA Facility Investigation (RFI), ERT performed digital geophysical mapping (DGM) of the Hero Road Trench Area MRS (HTRA) (FTSW-008-R-01) from June 9, 2012 through July 13, 2012. The HTRA site is being investigated for MC only, specifically the degradation by-products (arsenic, 1,4-dithiane, 1,4-oxathiane, and thiodiglycol) of dilute agent CAIS kits.

2. While the Work Plan called for transects to be placed 15 feet apart, due to a software mapping error, the licensed surveyors staked out the transects at a 20 foot interval. After discussion with the CENAB geophysical staff, ERT added additional transects in between each 20 foot transect. Therefore, data at HRTA was collected on transects 10 foot apart; data was collected on a total of 119 transects (Figure 1).

3. Figures 2 and 3 provide the results of EM31 Conductivity and In-Phase mapping, respectively. The color scale selected for this contoured geophysical data was selected to highlight areas with geophysical responses typical of a burial area, rather than to identify potential individual items. The color scale is set up so that responses that exceed the top and bottom numbers are all the same color (i.e., everything over 11.5 is pink). Due to the varying responses, there is no way to set the scale to include the entire range of values without losing resolution. Mapped surface features and debris (varying size black dots, circles, and polygon) are shown along with the perimeter fence, and the locations of two ground scars based on historical photography (1957). Geophysical anomalies in the southeast portion of the southern ground scar resemble a potential burial area. Surface debris, such as radial tires, concrete piles, rusted drums, etc., in the area provides additional evidence that dumping has occurred in the region.

Laurel, MD 20707
Phone: 301-361-0620
Fax: 301-361-0659
www.ERTCorp.com

4. The Revised Preliminary Memo dated 17 July 2012 provided the suggested locations of four (4) trenches and sixteen (16) biased sampling locations. These preliminary locations were selected based on both the ground conductivity and ground scar information.

5. A conference call was held on 26 July 2012 to discuss the memo and finalize trench and biased sampling locations. Call participants included: Amy Potter, Will Powell, and Mo Ghazi, GAEPD; Algeana Stevenson, Jimmie McGowan, and Dale Kiefer, Ft. Stewart; Debbie McKinley and Tom Colozza, CENAB; and Jennifer Harlan, Lauren Franke, Jim Stuby, and Neil Jones, ERT.

6. Based on this call, a total of 5 trenches will be investigated and 16 biased samples will be collected.

7. Three of the five final trench locations have conductivity responses with an absolute value higher than 20 mS/m (Table 1). Trench locations T1 though T3 are located in the southern historical ground scar. The preliminary trench location T4 was in the northern historical ground scar, in order to provide coverage to this area, but the anomaly had a relatively low response. Therefore, based on the 26 July 2012 conference call, T4 was moved to an area just south of the historical ground scar where preliminary soil sample bias-4 was located. Bias-4 will be collected from the preliminary T4 location. T2 is located within the largest surface debris area, which is surrounded by multiple strong conductivity anomalies. This cluster of surface debris and anomalies is the best indicator of a burial area shown by the data. T5 is located to the east of the southern historical ground scar and surface debris area. ERT field personnel will conduct a visual and Schonstedt assisted survey of this location to determine if the anomaly is caused by surface debris. If it is not, ERT will conduct trenching in this location.

Table 2: Trench Locations

ID #	X Coordinate	Y Coordinate	Conductivity mS/m
1	442259.6	3527310.0	-10
2	442306.3	3527359.4	-30
3	442222. 6	3527391.3	24
4	442304.9	3527324.3	-22
5	442329.1	3527381.5	12

8. The trenches will be 30 square feet in surface area and will be centered on the location of the conductivity response. The site is moderately to heavily vegetated with trees and brush that may limit where the trenches can be installed. Placement and orientation of the trenches will be made in the field in accessible areas, ensuring the anomalous response is bisected by the trench. GPS data on the outline of the pit will be collected and included in the RFI Report. The surface size of the trench may be increased if the

Earth Resources Technology

6100 Frost Place, Suite A

Fax: 301-361-0659
www.ERTCorp.com

trenches are extended below 5 feet (10 feet is the maximum depth of investigation at this MRS) in order to conduct stepping that is needed for safety concerns. A Trenching Competent Person will oversee all trenching work starting at a depth of 4 feet bgs, with sloping to occur starting at 5 feet bgs. All trenching work will be conducted using a mini-excavator.

9. Per Table 3-4 of the January 2012 Final Work Plan, two samples will be taken from the side wall of each trench. The first sample (surface) will be collected from the top 12 inches of the trench and the second sample (subsurface) will be collected from 1 foot bgs to the bottom of the trench. As detailed in Worksheet #11 of Appendix E, the determination of the location of the side wall samples will be made using best professional judgment by the geophysicist and sample team lead who will look for soil staining, the location of dilute agent CAIS kits (if found), and direction of groundwater flow (if found). If there are no field indicators available, the sample will be collected from the southern wall of the pit/trench. Additionally, biased soil samples will be collected if discrete areas of soil staining or contamination related to MC are observed.

10. Figure 4 shows the location of the 16 biased soil samples based on the distribution of the ground conductivity results and historical aerial photography. Both a surface (0-12 inches) and a subsurface sample will be collected from these 16 biased locations. As detailed in Table 2, each biased soil sample location was selected due to the response noted during the EM31 DGM work and the historical aerial photography. The geophysical responses from the EM31 within the ground scars were given highest priority in selecting biased sample locations. A lower priority was given to areas where a geophysical response was evident, but the location was unassociated with ground scars. The greater the difference in response from 0.0 mS/m, which is considered the background conductivity, the greater the chance the response is due to non-natural conditions (i.e., metallic anomaly, disturbed soil, etc.); therefore, these areas show the most promise to assist in characterizing the site as it related to MC contamination and the possible burial of dilute agent CAIS kits. ERT will collect the biased soil samples directly above the peak of the associated geophysical response, or as close to the peak as is reasonable based on field conditions. Approximately half of the biased sampling locations are within the historical ground scars; the other ones are outside of these areas in order to provide coverage of the entire MRS at these higher response sites.

11. Per the 26 July 2012 conference call and subsequent follow up by the GAEPD, the subsurface sample will be collected from the soil horizon immediately above the groundwater or if groundwater is not reached by 10 feet bgs from the interval 9-10 ft bgs at each biased sampling location. Per the GAEPD Risk Assessment unit, subsurface samples need to be collected no more than 10 feet bgs or the top of the water table for the construction worker scenario, which is being evaluated in the RFI Report. This is a slight deviation from the July 2012 Final Revised Work Plan, which stated that biased subsurface soil samples will be collected from the soil horizon immediately above the

groundwater, or at a depth suggested by the DGM ground conductivity results. As the depth of the groundwater is not known and the DGM results are not able to provide a depth associated with each anomaly, the sampling approach needed to be revised to have an absolute bottom depth. All participants on the conference call agreed to this approach.

Table 2: Biased Soil Sampling Locations

Biased Soil ID #	X Coordinate	Y Coordinate	Conductivity
1	442320.6	3527225.9	-14
2	442225.4	3527271.6	-150
3	442273.9	3527310.9	-32
4	442166.2	3527562.8	-8
5	442293.3	3527345.1	-8
6	442325.7	3527347.4	-12

		REVIEW:	**MEMORANDUM**, **REVISED** Preliminary results of the Hero Road Trench Area MRS DGM and recommended Test Pit and biased sampling locations, 17 July 2012
		DATE:	18 July 2012
		NAME:	Debbie McKinley, P.E., CENAB
NO.	SECTION, PAGE OR OTHER REFERENCE	COMMENT	RESPONSE
Debbie McKinley's comments			
1.	Paragraph 5	Worksheet #11 of the Final Work Plan states that, if pits need to be dug deeper than 4 feet, ERT will implement the trenching and excavation plan detailed in the APP and may utilize mechanical excavation equipment to complete the trenches. This paragraph refers to a 5-foot cutoff. Please resolve this apparent discrepancy.	The reference to increasing the size of the trench if it is deeper than 5 feet is due to the safety regulations that require slopes/stepping out for trenches 5 feet or deeper. We will need to implement the trenching and excavation plan in the APP at 4 feet bgs and have an Excavation Competent Person onsite, but the footprint of the trench will not need to increase until a depth of 5 feet is reached. We do intend to use mechanical excavator from the beginning of the trench work, rather than digging by hand first and then using mechanical equipment.
2.	Paragraph 6	While the reference to Table 3-4 is correct, it would appear to be incomplete. Worksheet #11 of the Final Work Plan states that the determination of the location of the side wall samples will be made using best professional judgment by the geophysicist and sample team lead who will look for soil staining, the location of dilute agent CAIS kits (if found), and direction of groundwater flow (if found). If there are no field indicators available, the sample will be collected from the southern wall of the pit/trench. Suggest these specifics be added to the memo.	These additional specifics will be added to the memo.

3.	Paragraph 7	It is stated that the locations of the 16 biased soil samples are based on the distribution of the ground conductivity results and historical aerial photography. Yet, it is stated in the third sentence that each biased soil sample location was selected due to the response noted during the EM31 DGM work. Therefore, it is unclear what information from the historical aerial photography was used to assist in locating the biased samples. Please clarify and revise the text as appropriate.	The biased sample locations were selected based on both the ground conductivity and ground scar information. The following text was added after the 3rd sentence: "Geophysical responses from the EM31 within the ground scars were giving highest priority in selecting biased sample locations. A lower priority was given to areas where a geophysical response was evident, but the location was unassociated with ground scars."
4.	Paragraph 7	It is stated in Section 3.7.5.1 of the Final Work Plan that the biased subsurface soil samples will be collected from the soil horizon immediately above the groundwater, or at a depth suggested by the DGM ground conductivity results. What, therefore, is the basis for collecting the subsurface sample from 12-24 inches bgs at each of the 16 biased locations? Is this the depth suggested by the DGM ground conductivity results at each of the 16 biased locations? Please clarify and revise the text as appropriate.	The notation of subsurface samples 12-24 inches bgs was incorrectly included in the memo. When preparing the Work Plan, ERT thought that the depth of groundwater at this MRS would be 3-4 feet bgs, which is why the statement of sampling immediately above groundwater was included in the Work Plan. However, we now know that GW could be anywhere from 3 - 15 feet bgs and sampling to that depth is not needed to support the risk assessment work. Additionally, the DGM ground conductivity results do not provide justification for sampling at any particular depth. They do provide information for possible burial areas and if those areas have material, sampling should be conducted below the buried materials. This was discussed during the 26 July conference call, as detailed in the response to comment #17.
5.	Table 1	Several of the conductivity values exceed the mS/m color scale provided in Figure 4 (e.g., -14, -150, -32, 50, etc.). This, combined with the distance scale of the figure make it difficult to discern whether or not the biased soil samples are actually placed in the noted areas of conductivity or not.	The scale is set up so that responses that exceed the top and bottom numbers are all the same color (i.e., everything over 11.5 is pink). Due to the varying responses, there is no way to set the scale to include the entire range of values without losing resolution. A note to this issue will be included in the memo. Additionally, the following text will be added: "ERT will collect each biased soil samples directly above the peak of the associated geophysical response, or as close to the peak as is reasonable based on field conditions."

6.	Figure 4	Please verify that location Bias 3 is sited to address a separate conductivity response than the nearby test pit T-1. Again, the distance scale of the figure makes it difficult to discern this.	Bias 3 and T1 are two separate conductivity response areas. ERT revised the figures to include close-ups of the southern portion of the southern historical ground scar.
7.	Figure 4	The locations of the random soil samples differ from those presented in Figure 11 of the Final Work Plan, yet no explanation is given for revising the sampling locations. Please clarify and revise the text as appropriate.	Random soil locations were revised based on comments from TPP #2 that we did not need to collect a soil sample in the parking lot; ERT re-ran VSP to get the updated random samples shown in this memo. The Final Revised Work Plan, dated July 11th has a revised Figure 11 and table with the sample coordinates that match what was used in this memo.
Tom Colozza's comments			
8.	Item #3	All potential burial anomalies should be identified and labeled on the DGM maps.	The selected locations for the trenches represent the areas that have the highest possibility of being burial areas.
9.	Item #4	Why only consider anomalies within the ground scars, small excavations could have occurred which would not show up on aerial photography. All target anomalies present in both channels of the EM31 should be investigated.	These anomalies occurred on a single EM31 path and represent discrete items, rather than being indicative of burial areas. The focus of the trenching activity is not to resolve individual anomalies but to characterize broader anomalous areas that may represent burial pits/landfills. We believe that biased samples will be sufficient to characterize the individual anomalies.
Mary Ellen Maly's comments:			
10.	Page 1, Item 4:	I'm not sure I understand your 2nd sentence, particularly this part, "...but excluding areas outside of mapped surface debris areas". Does this mean that you ignored the EM31 data outside the surface debris areas with regards to where you put your test pits? If yes, why? It seems likely that there could be burials in areas w/o surface debris.	This statement notes that we did not pick locations for the test pits where there were large responses from surveyed surface debris areas so that the test pits locations were not biased to areas that only have a response due to the surface debris; we focused on non-surface debris areas initially, but did place 1 test pit the area with the most surface debris as there were indications that this area could also represent a subsurface burial area.
11.	Page 2, Item 5:	What will your test pit dimensions be? You say 30 sq feet, but that could be 1x30, 2x15, 5x6, etc. Can you be more specific?	We will use a light excavator with an 18" to 24" bucket. Most trenches will be the width of one bucket and approximately 15 feet long. However, it is expected that dimensions will vary based on field conditions (primarily trees) and may not be perfect rectangles. GPS data will be collected on each trench for the RFI Report.

12.	Page 2, Item 6:	You say the test pits will be from 5 to 10 ft deep. You say that your 2nd (deeper) side wall sample will be in the zone from 1 ft bgs to the bottom of the trench. That will be from a 4 - 9 ft zone, which seems excessively large. Would you composite over this zone? What if you see discrete areas of different staining or contamination? Will you collect additional samples?	There may be a difference in the depth of each test pit; however, the subsurface sample will be from a discrete sample of the trench wall covering the interval of 1 foot bgs to the bottom as noted in the approved Work Plan. The Work Plan also notes that additional biased samples will be collected as needed based on field observations related to MC (this includes soil staining). This information will be added to the memo.
13.	Test Pit locations	I'm not that familiar with interpreting EM31 data. Based on the conductivity results and the in-phase data maps, I tried to figure out why you chose the 4 locations for the test pits, but I didn't see anything obvious. Could you add your rationale for why each of the test pits was located where you recommend them to be?	As stated in #4, the test pit locations had response with an absolute value higher than 20 mS/m and three of these areas were within the historical ground scars. The fourth test pit location was selected due to the large area of surface debris and responses that noted this could be a potential burial area. A more detailed rationale for each location will be included in the Final Test Pit Memo that will be generated after the 26 July conference call.
26 July Conference Call Comments			
14.	Biased Sample location	GAEPD asked if Biased Sample 10 should be relocated further to the west where the conductivity data shows an anomaly.	ERT survey crews identified this area to the west of Biased Sample 10 to be surface debris (specifically metal pipes); therefore, a biased sample was not placed in that location.
15.	Test Pit and Biased Sample Locations	GAEPD suggested replacing Biased Sample #4 with a Test Pit in order to characterize this anomaly. Biased Sample #4 should then be moved from the southern ground scar area to the northern ground scar area where Test Pit #4 was previously located.	USACE, FTSW, and ERT agree. This information will be added to the memo. ERT will also revise the figures attached to the memo to reflect these changes.
16.	Biased Sample location	Tom Colozza expressed concern that a sampling location is not identified for the anomaly detected outside of the southern ground scar area to the east of Test Pit #2.	This location is noted as T5 on Figures 2 and 3. ERT field personnel will examine this area and determine if this area is associated with surface debris; if surface debris is not present, ERT will conduct trenching activities in this location. This information will be added to the memo.

17.	Depth of Subsurface Biased Samples	The project team discussed the depth of subsurface samples at the biased sample locations; previous indications were that the depth of groundwater may range from 3-15 ft. ERT stated that because the subsurface samples are being collected for use in the Risk Assessment, the maximum depth of the subsurface samples if groundwater is not encountered needs to be determined.	Per discussions, it was determined that groundwater may only be 3-6 feet bgs in this area, but this is unknown until the work is conducted. As such, the biased subsurface samples will be collected on the soil horizon above groundwater or if groundwater is not reached by 10 feet bgs, at the interval of 9 – 10 feet bgs. After the 26 July conference call, GAEPD followed up with their Risk Assessment Unit who indicated that subsurface samples can be taken at a maximum of 10ft bgs if groundwater is not encountered prior to this depth. This covers the construction worker scenario. This information will be added to the memo.
18	Excavator Safety	Ft. Stewart DPW personnel noted that if an excavator was being used for the project, a certified operator is required. This operator must have a physical within the last year. Additionally, the excavator must undergo a daily safety inspection that is documented in the field reports.	ERT noted that the operator was certified and per USACE safety requirements, every person working on the site has had a physical within the last year. Additionally, the ERT Project Manager will coordinate with the Safety Officer to ensure the safety inspections are completed and documented in the daily safety reports.

Hero Road Trench Area MRS Trench Report

Introduction:

As detailed in the 27 July 2012 Final Hero Road Trench Area MRS Test Pit Memo, a total of five (5) trenches were chosen for investigation based on the results of the digital geophysical mapping (DGM) investigation using the EM31. The goal of this trenching was to determine if dilute agent CAIS kits had been improperly disposed of at the MRS in burial pits. Three of the five final trench locations (T1 through T3) were located within the southern historical ground scar. Trench location T4 was in an area just south of the historical ground scar and trench location T5 was located to the east of the southern historical ground scar. A large surface debris area was associated with trench location T2. Figure 10 in Appendix A of this RFI Report shows the locations of the trenches. Additionally, a copy of the 27 July 12 memorandum is included in Appendix K.

ERT completed the excavation, sampling, and characterization of five trenches on 30 and 31 July 2012. Each trench had an approximately 8 by 4 feet surface area and was dug to native soil, as determined by the field soil scientist; the trench depth ranged from 4 to 6 feet. The Hero Road Trench Area MRS is a densely vegetated area that had loose organic vegetation covering the ground surface. This vegetation layer ranged from between 2 inches and 9 inches thick at the trench locations and was not included in the depth of the trench nor was it included in the soil surface sample.

Trench #1

This trench, located within the southern historical scar, was dug to a depth of 48 inches (4 feet) below ground surface (bgs) (Photo 1). Due to the development of the soil horizons and the colors of the soil, the field soil scientist determined that native soil had been reached at this depth. The western side wall was scraped with a knife to expose and accurately describe the soil horizons (Photo 2). The spoils from Trench #1 contained a large metal cable, drum remnants and other miscellaneous metal debris, which were the most likely cause for the DGM response in this location (Photos 3 through 7). The soil sample for Trench #1 was taken towards the middle of the western wall of the trench because of the presence of thick tree roots in other areas of the trench and because there was no evidence of soil staining or contamination at the sample location.

There was approximately 8 to 9 inches of ground surface organic matter and vegetation, consisting of tree roots, branches, and leaves; this organic layer was not included in the surface sample. The surface sample was taken from 0 to 12 inches bgs and consisted of dark brown to dark grey sandy loose soil with many small roots and contained little organic material (Photo 8).

The composite subsurface sample was taken 12 inches bgs to the bottom of the trench (48 inches bgs). The surface horizon in Trench #1 was underlain by a thin horizon of yellow sand, followed by approximately 24 inches of dark grey loose sand to a depth of 36 inches bgs. From 36 to 48

inches bgs the soil was dark grey sand with red oxidation; the presence of reddish spots (iron oxidation) in the soil is indicative of water saturation at some point. The bottom layer of Trench #1, starting at 48 inches bgs, consisted of yellowish brown very loose sand. There was no indication of contamination throughout the entire trench soil profile.

Trench #2

Trench #2, located in the southern historical ground scar, was dug to 48 inches (4 feet) bgs and was located in an area surrounded by old rusted metal drums and other surface debris (Photos 9-11). The field soil scientist determined that native soil had been reached at 48 inches bgs due to the development of soil horizons. The western side wall was scraped with a knife in order to expose the soil horizons. The spoils from Trench #2 contained bricks, construction debris, and other miscellaneous metal scrap (Photos 12-15), which were likely the cause of the DGM response at this location. The DGM results at this location were likely caused by the presence of this debris. A large piece of construction debris imbedded in the western wall on the north end of the trench was determined to be the likeliest location in Trench #2 for any contamination that may exist; therefore, this area was chosen for collection of the soil samples. Otherwise, no indication of contamination was observed in Trench #2.

There was approximately 2 inches of organic vegetation on the ground surface at Trench #2, which was not included in the surface sample. The surface sample was taken from 0 to 12 inches bgs, which consisted of dark brown sand to 1 inch bgs followed by dark brown sand mixed with construction debris down to 24 inches bgs (Photo 16).

The composite subsurface sample was taken from 12 inches bgs to the bottom of the trench; approximately 48 inches bgs (Photo 17). From 12 to 24 inches bgs, the soil horizon consisted of dark brown sand mixed with construction debris. The horizon from 24 inches to 36 inches bgs was dark brown to dark grey sand. Underlying that layer was another organic layer approximately 2 or 3 inches thick that contained wood chips and some red sandy soil to a depth of approximately 39 inches bgs. Directly beneath that layer was approximately 0.5 inches of black soil, which is indicative of dissolved organic matter, as well as the presence of iron reduction. From 39.5 inches bgs, the soil was light brown and light grey sand followed by dark grey and black sand down to 48 inches bgs. At 48 inches bgs there was a thick black horizon, which may indicate the presence of groundwater at some time in the past.

Trench #3

Trench #3, also located in the southern historical ground scar, was dug to 60 inches (5 feet) bgs (Photo 18). Due to the development of the soil horizons and the colors of the soil, the field soil scientist determined that native soil had been reached at this depth. There was a significant amount of large tree roots throughout the top 36 inches of soil. The southern side wall was exposed with a sharp knife in order to accurately describe the soil horizons. The spoils of Trench #3 contained barbed wire, and a large empty steel drum located on the south side wall of the trench (Photos 19-21), which was the likely cause of the DGM response at this location. There

was no noticeable soil discoloring or contamination evident in Trench #3; therefore, the soil sample was taken on the southern wall to the west of the empty drum.

The surface of the soil was covered with approximately 4 inches of organic vegetation, which was not included in the surface soil sample. The surface sample was taken from 0 to 12 inches bgs (Photo 22). The top horizon was dark brown sand with thick and medium-thick roots to 4 inches bgs. This was followed by a layer of light to dark brown mix sandy soil with few black spots to approximately 24 inches bgs.

The subsurface composite sample was taken from 12 inches bgs to 60 inches bgs at the trench bottom (Photo 23). At approximately 24 inches bgs, a very thin distinct black layer was present followed by 2 inches of dark to medium grey sand. This layer was followed by medium brown sand diffusing for about 3 inches to light brown with some reduction around the roots to approximately 36 inches bgs. Below this layer to 48 inches bgs, light brown sand was present that included some reddish lines. Dark brown sand was present at 48 inches bgs and diffused into very dark grey to black sand to the bottom of the trench at 60 inches.

Trench #4

Trench #4, located south of the southern historical trench, was dug to a depth of 72 inches bgs (6 feet) (Photo 24). Due to the development of the soil horizons and the colors of the soil, the field soil scientist determined that native soil had been reached at this depth. The east side wall of Trench #4 was scraped with a knife to expose the soil horizons. In this trench, extreme care was taken when sampling due to the presence of broken glass. The spoils of Trench #4 contained miscellaneous metal scrap and glass bottles (Photos 25-31); these glass bottles were representative of household debris, such as soda bottles, rather than small vials that would have been associated with dilute agent CAIS kits. A layer of glass bottles was present around the entire trench at approximately 18 inches bgs (Photo 32). This debris was the likely cause of the DGM response at this location. The glass layer also contained some reddish sandy soil. Since the glass layer continued around the entire trench, the sample was taken on the south end of the east wall where the clearest example of the glass deposit was noticed. Other than the reddish soil, which could also indicate iron reduction, no other contamination was noticed.

Approximately 3 inches of organic vegetation was present on top of the ground surface and was not included in the surface sample. The surface sample was taken above the glass layer from 0 to 12 inches bgs (Photo 33). The first soil horizon was dark grey sand to 18 inches bgs.

The composite subsurface sample was taken from 12 inches bgs to the bottom of the trench at 72 inches bgs (Photo 34). The sample began in the top soil horizon of dark grey sand, which extended to 18 inches bgs. Below this layer was approximately 6 inches of bottle debris and reddish soil to a depth of 24 inches bgs. At approximately 24 inches bgs there were 8 inches of dark grey sand with dark brown sand mixed in, as well as some spotting of reddish soil. From 32 inches bgs to approximately 35 inches bgs, dense organic roots with wood and what appeared to be decomposing palm branches (Photo 32) were present. Intermingled with this layer of organic

material was dark brown sandy soil. Below this organic layer approximately 24 inches of dark and medium dark brown sand followed by a 1 inch distinct black sand horizon was present to 60 inches bgs. The last horizon contained dark brown sand with some spots of black sand to 72 inches bgs. The black horizon is an accumulation of decomposed organic matter and could indicate the presence of groundwater at one time.

Trench #5

Trench #5, located east of the southern historical ground scar, was dug to a depth of 60 inches (5 feet) bgs and was directly adjacent to a very large, established tree having many large roots (Photo 35). At 60 inches bgs, the field soil scientist determined that native soil had been reached due to the color and development of the soil horizons. The western side of the trench was scraped with a knife to accurately describe the soil horizons. No significant amounts of debris were contained in the trench; however, some barbed wire was located around the tree adjacent to the trench (Photo 36), which was most likely the cause of the DGM response. Trench #5 was dug north to south and the samples were taken on the south end of the western wall (Photo 37). There was no indication or noticeable presence of contamination.

Approximately 2 to 3 inches of organic vegetation, including pine needles, was present above the ground surface, which was not included in the surface sample. The surface sample was taken from 0 to 12 inches bgs (Photo 38). The first soil horizon consisted of dark grey to medium grey sand with small to medium roots present to a depth of 18 inches bgs. The entire surface sample was taken from this horizon.

The subsurface sample was taken from 12 to 60 inches bgs (Photo 39). This sample began towards the end of the first soil horizon containing dark grey to medium grey sand until 18 inches bgs. The second horizon contained reddish orange soil with dark brown to black spots and a significant amount of reduced iron from 18 to 30 inches bgs. Dark grey sand with some light brown and white sand followed until 36 inches bgs. This was followed by a layer of dark brown, black, and light grey sand to the bottom of the trench at 60 inches bgs. A thick layer of black sand was present at the very bottom of Trench #5.

Conclusions:

Based on the DGM results and the trenching that was conducted at the areas that were most likely to be burial pits, there is no physical evidence that dilute agent CAIS kits were improperly buried at the Hero Road Trench Area MRS.

HEALTH AND SAFETY CHECKLIST

Project Name/Number: Hero RD 190mm RNG
Site Information/Location: MMRP / Ft Stewart
Date: 07 04 12

Answer each question by checking the appropriate column (yes, no, or N/A). If "no" is checked, please provide an explanation on the form.

	Documentation	Yes	No	N/A
1	Is the Site Health and Safety Plan (SSHP) on the Site?	☒	☐	☐
2	Has the SSHP and/or supplement been reviewed, dated, and signed within the last year?	☒	☐	☐
3	Are the tasks being completed reflected in the Supplement?	☒	☐	☐
4	Is there a written acknowledgement that all employees have been briefed on and read the SSHP (signature sheet)?	☒	☐	☐
5	Are the following training records current and available:			
	- 40-Hour HAZWOPER for ALL employees?	☒	☐	☐
	- 24 Hours Supervised Field Experience?	☒	☐	☐
	- 8-Hour HAZWOPER Annual Refresher?	☒	☐	☐
	- CPR/First Aid (minimum one person on site)?	☒	☐	☐
	- 8-Hour Hazardous Waste Site Supervisor and refresher?	☒	☐	☐
	- Initial Site Health and Safety Briefing?	☒	☐	☐
6	Site Health and Safety Briefing for each location or site (record in field log notebook)?	☒	☐	☐
7	Were fire extinguishers checked on first day?	☒	☐	☐
8	Were applicable Material Safety Data Sheets at the Site (located in Sampling Plan)?	☒	☐	☐
9	Are documents current and available that indicate personnel are medically fit to work and wear the required personal protective equipment (if required)?	☒	☐	☐
10	Are work zones adequately designated?	☒	☐	☐
11	Is required personal protective equipment available and correctly used, maintained, and stored?	☒	☐	☐
12	Is the following emergency equipment located at each site:			
	- Fire extinguisher?	☒	☐	☐
	- Eye wash (minimal)?	☒	☐	☐
	- Communications (walkie talkie or phone)?	☒	☐	☐
	- First aid kit?	☒	☐	☐
13	Is the buddy system in use?	☒	☐	☐
14	Are personnel refraining from drinking, chewing, smoking, taking medications, or other hand-to-mouth contact while working in the exclusion zone?	☒	☐	☐
15	Is the site organized to allow the use of lifting equipment, and avoid tripping hazards and spreading contamination?	☒	☐	☐
16	Was a random employee asked if he/she know site hazard and emergency procedures?	☒	☐	☐

The QC Inspector shall sign this checklist upon completion of all items on the checklist.

Project / Client _____

0630 Safety brief
0700 Left hotel
0715 Arrived @ ASP
0730 Set up equipment. GPS rover not communicating w/ base
- Called Lynnlee
0915 QC tests
0930 Traveled to grid 02
0950 Finished G-2. Started G-1
1000 GPS issues → lost NMEA string to allgeo
- resent command
1020 Cont' collected G-1, G-8
12:15 – 13:20 Lunch
13:20 G-7
1430 G-6
1515 PM QC test

Location Fort Stewart ASP Date 09 July 2012

Project / Client EM61 survey

0630 Safety meeting

0700 Left hotel. Traveled to ASP

0720 Arrived @ site. Waited until 0730 for storage bldg to open/unlock

0740 Rec NEMA string from rover. Called Lynelle for field laptop.

0800 Recent NEMA command. QC test

0830 Start survey

1200 Lunch

1245 Restart survey

1445 Finished survey. Ran repeat lines

1500 PM QC tests. ~~Process~~ Breakdown GPS base station. Traveled to ASP & Drive unloaded equipment

1520 Left site

Location Fort Stewart ASP Date 10 July 2012

Project / Client EM61 survey

0700 Safety meeting. Traveled to site.

0725 Arrived @ site. Loaded equipment in truck. Traveled to ASP EVS. Setup equipment

0745 Rover GPS not sending NEMA to allegro. Used field laptop to resend NEMA command.

0800 EVS & QC test.

0815 Traveled to G-8 / G-5 area.

1200 – 1245 lunch

1300 Survey

1500 QC test.

- readings fluctuating. Turned equipment off and disconnected all connections. Blew out any possible dust on connection. Reconnected connections. Decrease in fluctuation. Let machine run

1530 Ran QC test. Channels 2–4 were level w/ a 10mV fluctuation on channel 1

1600 Left site

6

Location Fort Stewart ASP Date 11 July 2012

Project / Client EM61 survey

0700 Safety meeting. Left hotel

0745 Arrived @ site. Set up equipment. Rover base did not send NEMA string. Set up laptop and reprogrammed rover to send NEMA string to Allegro

0800 Ran QC tests

0845 Began collecting short transects between the 2 rows of western bunkers

1030 Finished data collection.

1035 Ran QC tests. Broke down equipment.

1100 Dropped equipment @ ASP Facility for storage

Location HRTA Date 6/20/12

Project / Client _____

630 Brode, Mussio met UXO team in lobby for safety briefing & completing ~~of~~ incident reports on tick bites.

700 Leave hotel for the site. Stop for ice.

720 On-site. Set Geo & 1 UXO Tech (Shawn Rhodes) assisted w/ establishing fudicials in southern fenced in area.

830 Charlie Ethridge on-site. Brode met w/ him to give him instruction on cutting for today. Main goal is to get transects 100% complete. He started on. Transect 2 - 10, then is to call Brode.

~1100 Charlie called. He cut up to transect 15. 100% complete. Stopped to refuel.

1215-100 Brode, Mussio & Rhodes lunch on break & return to hotel for a couple of items.

100 Back on site. Geo began flagging T8 →T2

Location _____ Date _____

Project / Client _____

2300 - Ethridge called asking where
330 T33 needed to be cut at.
- Rhodes reported cut to Reg Shin to Brode. Brode instructed him to return to the van. Pull out first aid kit to clean wound & apply pressure dressing w/ gauze. Brode then phoned Safety, Steve Burnham. Steve met ~~Shaw~~ Rhodes @ van.
- Brode walked over to T33 to meet Ethridge. Showed him the depression area on the S. end of transect needed to be cut. ~~He & I~~ We decided he would finish clearing ~~T33~~ everything North of the thick vines (T32→17) then move South and clear below vines (T16-27, 29½-33)
- Shared Ethridge GPS unit for new transects. It looks like we can get it to work for him.

Location _____ Date _____

Project / Client _____

400 Geo finished setting fiducials for the day. Fenced in section of T3-21? Completed. T8 & 7 complete.
- Brode took Mussio + Uxo techs back to hotel.
430 Brode on site.
615 Decided to quit for the day.

Cutting completed: 2-15 100%
16→27: North & South portions completed. Center (b/t stakes -3½-4) have thick vines to be cut. 16+17 may be 100%??
28 100%
29-32 ~75% done. Need to be cut across depression
33-61 100%

Charles to return on 6/21/12.

1DW
FTSW-1DW-01 @ 905

930 Finish sampling, pack samples then return to hotel to print Shp labels for samples & rental equipment.

~~1030~~ 130* Drop samples @ eq. offload FedEx

~~1035~~* Return to Hero Rd. UXO team assisted Brode w/ loading eq. & supplies into van.

1200 Brode returned Keys for Hero Rd. to Jimmy. He wasn't in office so Brode gave them to his coworker.

~~1230~~ 130 Bye

200 Return to hotel. Project is completed.

Ft. Stewart
Sunny, partly cloudy, around 80°F
slight breeze

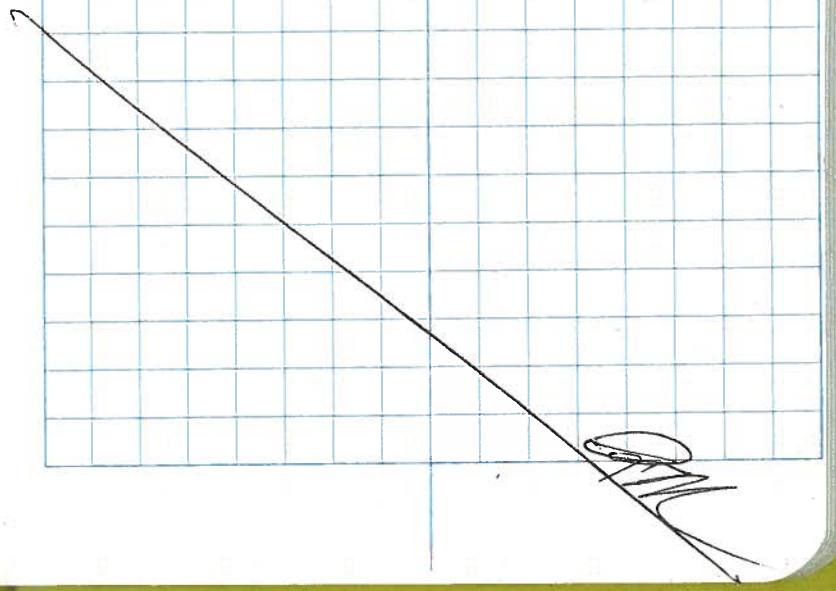
0900 Rebekah M on site at Ft Stewart Hero Rd parking lot.

Collecting IDW sample

FTSW-IDW-02 @ 1015
4 1 L bottles
2 250mL bottles
brownish soapy water

0920 Headed to North Gate
lid on too tight, called Jimmy for wrench. Told me to go to Hazardous waste office.

0940 Headed to Hazardous waste office, borrowed wrench



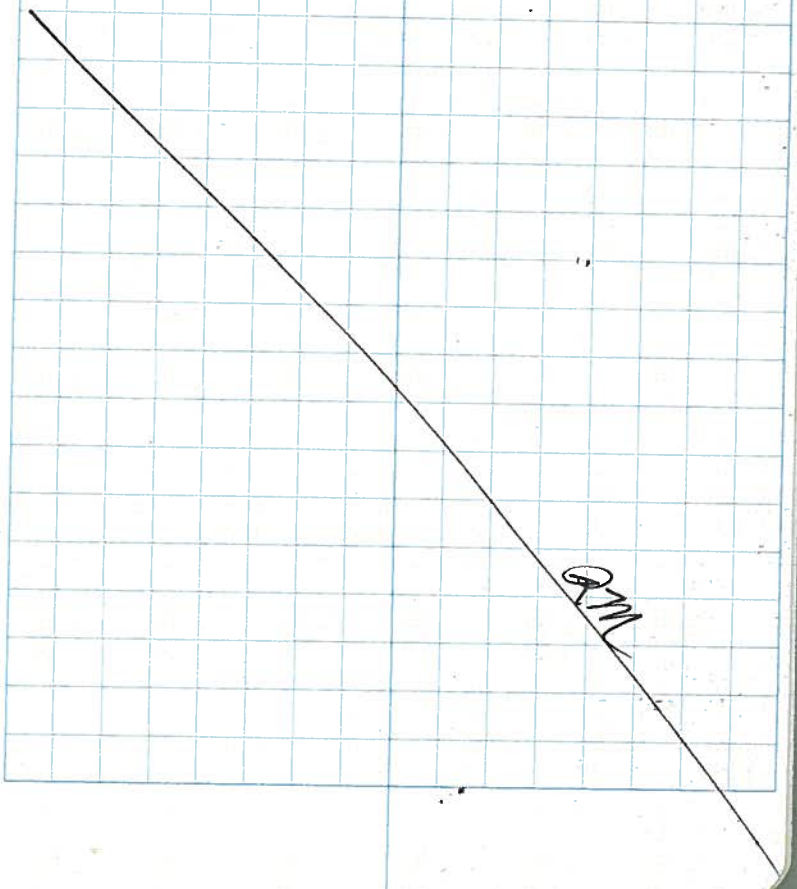
1000 Back at Hero Rd North Gate
Completed taking samples
filled 4 1 L bottles and
2 250mL just in case

1025 Returned wrench to Hazardous waste office and returned Hero Rd keys to Mr. Keifer since Jimmy was not available

1045 Rebekah M off Base and headed to hotel

1115 Dropped off cooler at Fed Ex

1125 Rebekah M Back at hotel



Fort Stewart, GA 3153-004

Jennifer Harlan - PM

7/24/12

1500 Rebekah McCoy arrived at hotel.

1730 Rebekah M, Lynelle B, TJ met to discuss sampling

Ft. Stewart

7/25/12 Sunny, Hot, Humid

0645 Safety Briefing at hotel

0735 Rebekah M arrived at security building to retrieve pass for vehicle

0900 ~~Headed~~ Called Jimmy McCallen and set up meeting with him now

0910 Arrived at building 1137 Jimmy's office. Discussed 12 sampling areas with him and Ag Determined That sites 2 and 3 were too far away. All other areas are within Cantonment area except 12A. Should be no issue going but Jimmy is going to double check. He sent shapefile of sampling areas. Will upload to trimble.

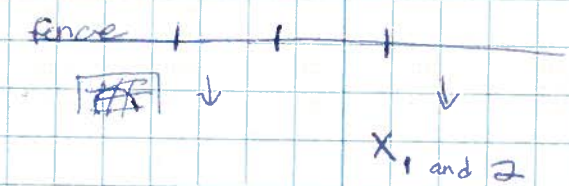
1011 Called Lynette to lead Rebekah to Hero Road.

1045 Met Lynette at Burger King parking Lot Discussed Background sampling and Scheduling, directions around Base

1115 Rebekah + Lynette Arrived at Hero Road Con Ex

1120 Lynette Left Conex, headed back to ASP. Rebekah inventoried, organized, seperated bottleware. Determined that Lab only sent 36 metals 4oz glass jars when supposed to send 38.

- Called lab - found out They only need 1 8oz glass jar for explosives. Also ordered additional glassware for 10 samples at AAR and 5 at Hero Road and ~~AAR~~ 2 additional sediment and surface water samples.
- Called Jenn Harlan and gave Update on background Samples. Decided That can take 2 Samples at one site if some sites are inaccesable.



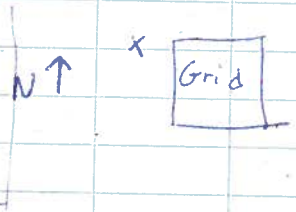
Cont At 1144 called Mike Gearheart to update him on bottle order from Lab and sampling schedule

1315 RM called Lynette B to inform her of completion at Conex and for notification That RM would be leaving the site

1320
1335 RM off site
1330 RM at hotel, proceeded to download new shapefiles of SWMUs from Jimmy Mcallen and edit, upload, and test Trimble

7/26/12 Clear skies, hot, humid, slight breeze

0645 Safety Briefing at hotel
0700 Team Left hotel
0742 Arrived at ASP
0800 Set up on first sampling location at edge of fence



- Lots of grass, surface soil dark grey w/ lots of organic roots
- dug about 4" before taking surface sample

Subsurface - Sand until 2' then slight clay, orange + red blotches, (iron)

Surface sample FTSW-AA-SO-01 @ 814

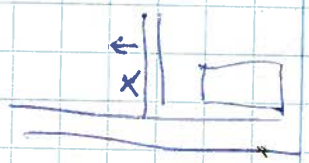
Subsurface 1.5ft FTSW-AA-SO+02(1.5) @ 820

0855 Moved to next sample Location.

Surface soil dark grey sandy w/ lots of roots no evidence contamination

Surface Sample FTSW-AA-SO-03 @ 0902
Dup FTSW-AA-SO-03 Dup 0904
MS FTSW-AA-SO-03 MS 0906
MSD FTSW-AA-SO-03 MSD 0905

Subsurface very clayey light grey, orange, lots of oxidized iron, very crumbly no evidence of contamination no smell
FTSW-AA-SO-04 (1.5) @ 0917

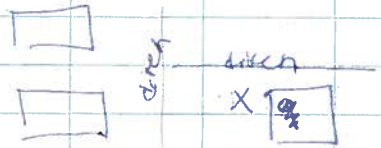


0950 Moved to 3rd Location

Surface Sample - next to animal hole, light grey sandy, no smell lots of roots, few bugs
FTSW-AA-SO-05 @ 0957

Subsurface - mix of light and dark grey sandy soils, little to no clay, few oxidations. no evidence of contamination
FTSW-AA-SO-06 (@1.5) @ 1002

1015 at 4th Location



Surface - Sandy lots roots, light grey on hill, no smell
FTSW-AA-SO-07 @ 1033

Subsurface - light grey, clayey w/ some sand, lots of oxidation reddish blotches (iron) some reduction characteristics indicative of saturation took Dup, MS, MSD

FTSW-AA-SO-08 (02) @1041
FTSW-AA-SO-08 (02) Dup @1043

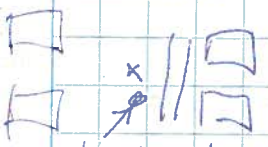
FTSW-AA-SO-08 (02) MSD @1050

1147
1120 at 5th Location

Surface - dark grey Sandy lots of roots, no evidence of contamination

FTSW-AA-SO-09 @ 1145

Subsurface - light grey, very light orangish, oxidation and reduction (red + black) present Sandy very loose



FTSW-AA-SO-10 (02) @1147

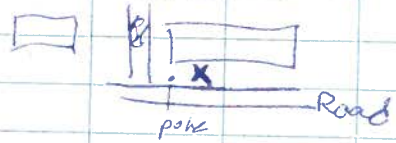
1157 - moved to outside gate for lunch, finished up notes + cleanup from last samples.

1230 Began ERB, from last sample @ sample 10

1245 FTSW-AA-SO-10 (03) ERB

1300 Arrived at 6th location

Surface Medium grey extreme amount of roots very loose Sand, no odor



FTSW-AA-SO-11 @ 1320

Subsurface

Very gravely from about 6" to 1' had tech come w/ pick to loosen. Tech was then able to use augur to collect sample, RM took augur and extracted soil. Very Sandy, very packed, Sandy medium grey with some reduced iron.

FTSW-AA-SO-12 (01.5) @ 1330

1350 Arrive at 7th site

surface - dark brown sandy, loose, no odor, no sign of contamination

few redox coloration's in surface

FTSW-AA-SO-13 @ 1406

Subsurface - Sandy Dark grey, brown, reddish - redox and oxidation, very loose, no odor, no sign of decontamination

FTSW-AA-SO-14 (02) @1412

1425 Arrive at 8th site

Surface- very hard, sandy grey, large clumps had to use knife to break soil, no evidence of contamination

FTSW-AA-SO-15 @1436

Subsurface

FTSW-AA-SO-16(01.5)@1450

Sandy brownish grey with redox and some white no odor - no evidence of contamination

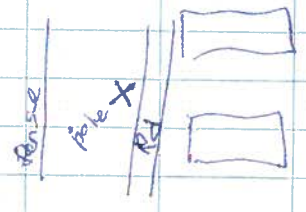
* Had UXO tech assist with pick on samples 16 and 12
* Decon'ed Auger after each subsample

1500 Steve gave ok to leave site
1525 arrive at hotel to complete COCs and ship the days samples,
1630 Delivered coolers to Fedex
1645 RM and Lynette Back at hotel

Ft Stewart

7/27/12 Hot, humid, little to no clouds slight breese at times

0645 Safety meeting at hotel



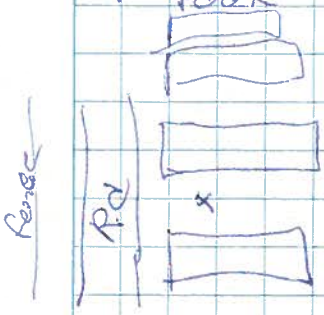
0700 Rebekah M left hotel to go get ice

0724 Rebekah M and Lynette B arrive at Hero Road comex

0745 Rebekah + Lynette left Hero Road

0755 Rebekah + Lynette on site at ASP

0805 Rebekah at random sample site



Surface - light grey loose, very dry no discoloration.

FTSW-AA-SO-17 @ 0825

Subsurface - hit rocks going down, sandy, few redox, dark grey w/ some white/light grey distinct odor - rotten eggs (sulfur) may have been saturated w/ water

FTSW-AA-SO-18(01.5) @ 0834

0839 Called Jenn Harlan, last sampling site on asphalt. She said to sample near there, chose location between bunkers + took GPS point

Surface - light grey, no odor, sandy, loose lots of roots

FTSW-AA-SO-19 @ 0915

Subsurface - needed UXO help to break up soil, very Hard dry clay redox and oxidized, dark grey to brown, no odor, some ants.

FTSW-AA-SO-20(01.5) @ 0944

0952 Arrive at North end of Ditch

Surface water present along w/ tadpoles + frogs, no odor

Surface water
FTSW-AA-SW-21 @ 1007

Sediment - Dark brown - much few organic roots. no odor
FTSW-AA-SO-21 @ 1010

1027 arrive at South end of ditch
no Surface water present
very fine layer of Dark grey sand then light grey light brown Sand w/ no odor. Some redox and oxidation
FTSW-AA-SO-22 @ 1036
1106 Rebekah M + Steve left ASP
1120 arrive @ background #1
located next to dirt road in field w/ multiple gas storage tanks, light-Dark brown loose Sand w/ few roots
FTSW-~~BK~~ AA-SO-23@1130

1140 arrive at background #2
- Located along fence + drainage ditch next to waste water containment.
- Had to dig through about 6" of gravel to get to very sandy light grey, w/ light brown sand w/ few roots
FTSW-~~BK~~ AA-SO-24 @ ~~10~~ 1152
GPS unit dead
1153 ~~1053~~ Steve left to head back to asp

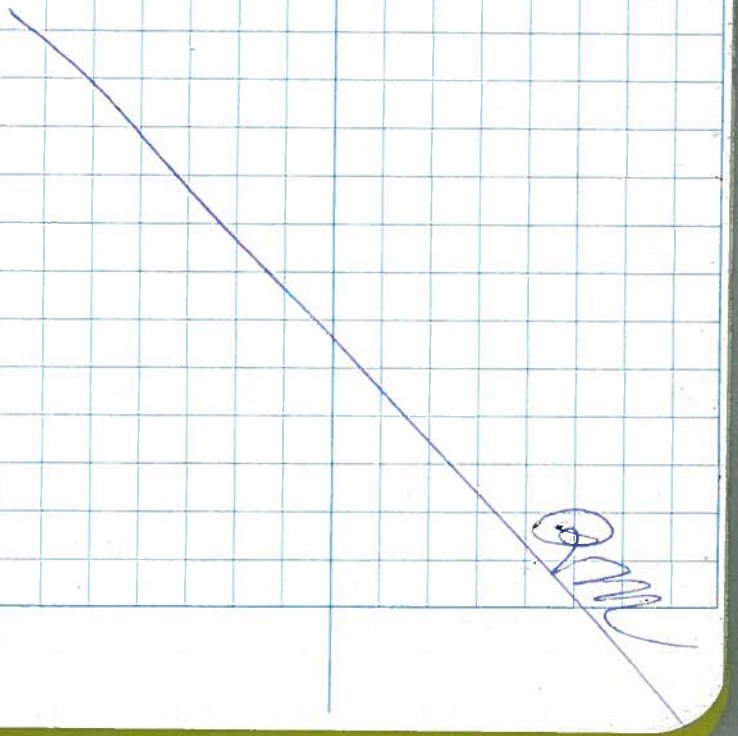
FTSW-AA-SO-22 ERB @ 1425

1441 Rebekah + Steve left HR

1455 Arrive at edge of old landfill now old pine forest + lake on edge
All sandy soil, light brown, light gray loose, some roots
FTSW-~~BK~~ AA SO-25 @ 1502
FTSW-~~BK~~ AA-SO-25 Dup@1504

went farther down rd to entrance of landfill took on right side of Road near edge of forest Dark Brown sand loose w/ lots small rocks

FTSW-~~BK~~ AA-SO-26 @ 1516



1525 Arrived at next location Waste Water plant - sample taken inside of fence at entrance, dark to light brown Sandy loose w/ some gravel, little to no rocks

FTSW-~~BK~~ AA-SO-27 @ 1530

1540 Next site - construction zone
1550 following site found by locked by gates will return on Monday

1605 Rebekah and Steve off Base
1620 Arrived at hotel

Samples will remain w/ Rebekah until Monday.

Ft. Stewart

7/30/12

0700 Safety Brief at hotel

0810 Rebekah arrive at HR parking lot

inputed trench coordinates going to flag location of trench's.

Lynelle brode will be buddy for Rebekah McCoy

0920 Completed placing flags for trenches

0929 Arrive at background location next to RR tracks + trains grass field + trees

FTSW-AA-SO-28 @ 940
Dark brown sandy soil, few roots, no odor

FTSW-AA-SO-29 @ 943
few roots Closer to train tracks, light to Dark brown sandy loose, no odor

1045 Arrive at HR parking Lot

Set up for Sampling at first site. About 6" organic peat + mat. Sandy soil with some roots, Dark brown soil, no odor, loose, few bugs

FTSW-HR-SO-01 @ 1134
FTSW-HR-SO-01 Dup @ 1134
FTSW-HR-SO-01 MS @ 1136
FTSW-HR-SO-01 MSD @ 1138

Subsurface - light grey, dark grey sandy loose soil cool. no odor no sign of contamination

FTSW-HR-SO-02 (01.5) @ 1144

collected ERB

FTSW-HR-SO-02 (01.5) ERB @ 1204

1225 At second random sample only about 1" peat + organic

Surface - medium grey w/ white specs, loose, no odor, sand some roots, lots organic

FTSW-HR-SO-03 @ 1233

Subsurface
Sand Dark + medium sand very loose no odor, no roots

FTSW-HR-SO-04 (02) @ 1237

1250 Arrive at 3rd site

Lots of peat x 6" worth Surface red w/ medium to Dark Grey Sand, no odor lots of roots

FTSW-HR-SO-05 @ 1310

Subsurface - orange to yellowish sand, no odor some black to dark grey mixed. no odor, very loose

FTSW-HR-SO-06 (01.5) @ 1315

1335 @ 4th random
Middle of woodchip pile

About 8" of organic and peat Medium to dark grey loose Sand w/ white specs. no odor

FTSW-HR-SO-07 @ 1349

Subsurface - grey/yellow sand w/ some black splotching, very loose no odor

FTSW-HR-SO-08 (02) @ 1354

1400 Arrive at 5th site
Next to large tree about 6" peat, lots of rocks, Medium to Dark Grey w/ white spots loose Sand no odor

FTSW-HR-SO-09 @ 1408

subsurface - Dark grey w/ some light grey w/ some white sand hit few roots, loose, no oder

FTSW-HR-SO-10 (01.5) @ 1420

1325 Rebekah M off site headed to hotel

1600 Rebekah M dropped off 2 coolers at Fedex location

1610 Rebekah M Back at hotel

Ft. Stewart

7/31/12 overcast, cooler light breeze

0645 Safety Brief at hotel

0710 Rebekah McCoy and Lynette brode at HR convey along w/ Jeff (USACE)

0745 Arrive at N gate at HR Head out to 1st sample

Medium to dark grey sand w/ white specs, lots of roots, loose no odor

FTSW-HR-SO-11 @ 0811

Subsurface

Some deep roots, dark grey, with some light grey sand loose, little organic no odor

FTSW-HR-SO-12 (10 1.5) @ 0818

0820 Arrive at next location

Some surrounding trees, lots roots

Medium to Dark grey sand w/ some white, loose, no odor

FTSW-HR-SO-13 @ 0827

Subsurface - some small roots
Dark to Medium grey loose sand
little organic. no odor

FTSW-HR-SO-14 (01.5) @ 0833
FTSW-HR-SO-14(01.5)Dup @ 0835

0834 Tornado warning sounded, gathered everything headed to van. Checked w/ Steve and w/ NWS - no warnings. Was a Drill.
0900 All clear
0905 Arrive at next site about 1" organic

lots roots Dark brown, Dark grey w/ some white specs loose sand no odor damp

FTSW-HR-SO-15 @ 0915

Subsurface - Dark brown sand little organic damp loose some red roots

FTSW-HR-SO-16(01.5)@0921

0935 Arrive at next site

About 6-7" organic layer

Surface Dark to medium grey w/ white sand, loose no odor, lots roots

FTSW-HR-SO-17 @ 0943

Subsurface
- Dark black w/ lots of wood (decaying tree or woodchips) sand w/ organic lots

FTSW-HR-SO-18(02)@1016

1045 Arrive at last location

About 1" organic layer
Dark to Medium grey loose sand with few white specs no odor

FTSW-HR-SO-19 @ 1058

Subsurface - some roots reaching 1'

Medium to light grey sand w/ some black and some white spots very loose, no odor

FTSW-HR-So-20(01.5)@1104

1120 Arrive (RM + LB) at south Gate AR.

1145 Trench #1

Anomaly most likely due to cable, drum remnants and other metal debri, random glass

8-9" of organic on top Dark Brown / Dark grey horizon followed by Thin layer yellow sand then 1.5-2' of Dark grey sand. About 3' down run into Dark grey w/ root oxidized red spots (groundwater at this point some time ago) At 4' run into yellowish brown sand.

prev Groundwater level and light sand indicate native soil

Surface

FTSW-HR-So-21 @ 1200

Subsurface 1' to 4'

FTSW-HR-So-22(04) @ 1204
FTSW-HR-So-22(04) @ 1207
FTSW-HR-So-22(04) @ 1210
FTSW-HR-So-22(04)MSD@1213

1215 Trench #4

about 6' deep possible vehicle debris Anomaly most likely due to metal scrap including round objects, lots of glass bottles, medical + beer

3" of organic Dark grey sandy 1.5' followed by 6" of bottle debr. w/ reddish s.i followed by about 6" of Dark grey with Dark brown sand, Then 3" organic

roots/ wood with Dark brown soil
few more 2" of Dark + medium
brown sand soil
1" black sand distinct
boundary
1' of Dark brown soil w/.
some black sand

Surface to 1'

FTSW-HR-So-23 @ 1239

Subsurface 1' - 6'

FTSW-HR-So-24(06)@1244

1300 Arrive at trench #2

Area surrounded by steel drums
Anomoly probably due to
steel drums, scrap metal, bricks
and other building materials

Top 2" organic pine + debris,
followed by 1" Dark brown
soil with mix of building
materials. About 2' down

where sample being taken, old buried
building material. All dark brown
to dark grey soil until about
3' then organic layer (wood
chips) with some red soil
followed by 1/2 in thin black
layer with some redox then
light brown, light grey sandy soil
followed by Dark grey/black
thick horizon (water level
may have been here) to 4'

Surface to 1'

FTSW-HR-So-25 @ 1319

Subsurface 1' to 4'

FTSW-HR-So-26(04)@1322

1330 Arrive at trench #5
about 5"
Anomoly may be due to wire fence
Nothing of note in spoils
from trench

Surface 1½' Dark grey to medium grey sand w/ lots roots, About 2' down reddish sal with Dark brown to black Splotches lots of redox for about 1', after Dark Grey w/ some light brown + white Sand for about 6" Then mix of Dark brown, Black and light grey Sand to bottom More black at bottom

Surface to 1'

FTSW-HR-So-27 @ 1340

Subsurface 1' to 5'

FTSW-HR-SO-28(05) @ 1343

1350 Trench #3

Anomaly due to steel barrel drum and lots barbed wire

Surface to 4" Dark grey to Dark brown sand, loose lots of roots, 6"s of light brown Dark brown mix w/ some black Spots, under lying very thin black layer followed by 2 in Dark to medium grey sand, then Medium Brown diffusing 3" below to light brown w some redox around roots about 1' followed by light brown w/ some reddish lines at about 3.5 to 4 ft Dark brown 4' and below Dark brown to black dense sand

Surface to 1'

FTSW-HR-So-29 @ 1414

Subsurface 1' to 5'

FTSW-HR-SO-30(05)@ 1418

1510 Rebekah M Left HR site

1540 Dropped off Samples at Fedex

Ft. Stewart

8/1/12

0645 Safety meeting at hotel

0655 Called Jenn to confirm subsurface sample taken 9-10', yes

0730 At HR site

Bias #1

Surface - Medium Grey sand loose no odor

FTSW-HR-SO-31@ 0744

FTSW-HR-SO-31D@ 0746

FTSW-HR-SO-31MS@ 0748

FTSW-HR-SO-31MSD@ 0751

Subsurface

Dark compact extremely hard in spots Reddish brown sand w/ little clay

FTSW-HR-SO-32(10)@ 853

Bias #2

Surface Medium to light grey sand, loose no odor

FTSW-HR-SO-33@ 0924

Subsurface

Dark compact hard spots Reddish brown sand w/ some clay

FTSW-HR-SO-34(10)@ 1016

FTSW-HR-SO-34(10) Dup@1018

Bias #3

Surface medium grey w/white specs loose sand

FTSW-HR-SO-35 @ 1046

Tried to do subsurface - got stuck at 3ft

Bias #7

Surface Medium to light grey loose sand no odor some roots

FTSW-HR-SO-36 @ 1128

* Hit metal scrap at around 2-3 ft

Hit very moist to saturated soil at 9.5 ft

FTSW-HR-SO-37(09.5) @ 1252

1264 Talked w/ Jenn Harlan about how long and amount of effort going into subsurface sampling. There might be a few options
- using excavator then auguring
- having techs help out
- using geoprobe

1309 Tried calling Jimmy again to gain access to last locations for background sampling

1325 Started collecting ERB

FTSW-HR-SO-37(09.5) ERB @ 1340

Bias #5

Medium to light grey loose sand w/ some roots.

FTSW-HR-SO-38 @ 1357

Bias #6

Medium to light grey loose sand w/ lots of roots + organic

FTSW-HR-SO-39 @ 1405

Bias #8

Medium to light grey loose sand w/ 6-8" peat + debris on top lots of roots

FTSW-HR-SO-40 @ 1415

Bias #10

Medium grey to brow loose sandy soil w/ lots roots metal plate buried

FTSW-HR-SO-41 @ 1425

Bias #9

Dark grey w/ white specs, lots of organic roots, sandy loose

FTSW-HR-SO-42 @ 1434

* Next to massive metal structure

1510 Headed out to ship current Samples, left HR Lot

1530-1545 talked w/ Dail about access to background sampling

~~1600~~ Dropped off samples at FedEx

1~~6~~00 Arrive at HR Northbank

Bias #16

Dark Grey Sand w/ some reddish soil from peat about 6" of organic on top

FTSW-HR-SO-43 @ 1621

Bias #15

In between 2 trees Medium to light grey loose sand covered w/ 1-1½ ft peat and organic

FTSW-HR-SO-44 @ 1633

Bias #13

Next to tree

Medium to Dark grey loose sandy soil 6 inch peat above

FTSW-HR-SO-45 @ 1645

Bias #14

1½ ft ~~peat~~ w/ ~~some~~ ~~reddish~~ Medium to light grey sandy soil with some white specs →

FTSW-HR-SO-46 @ 1700
FTSW-HR-SO-46 Dup @ 1705

Bias 11

4" peat Medium grey sand Soil w lots of roots throughout

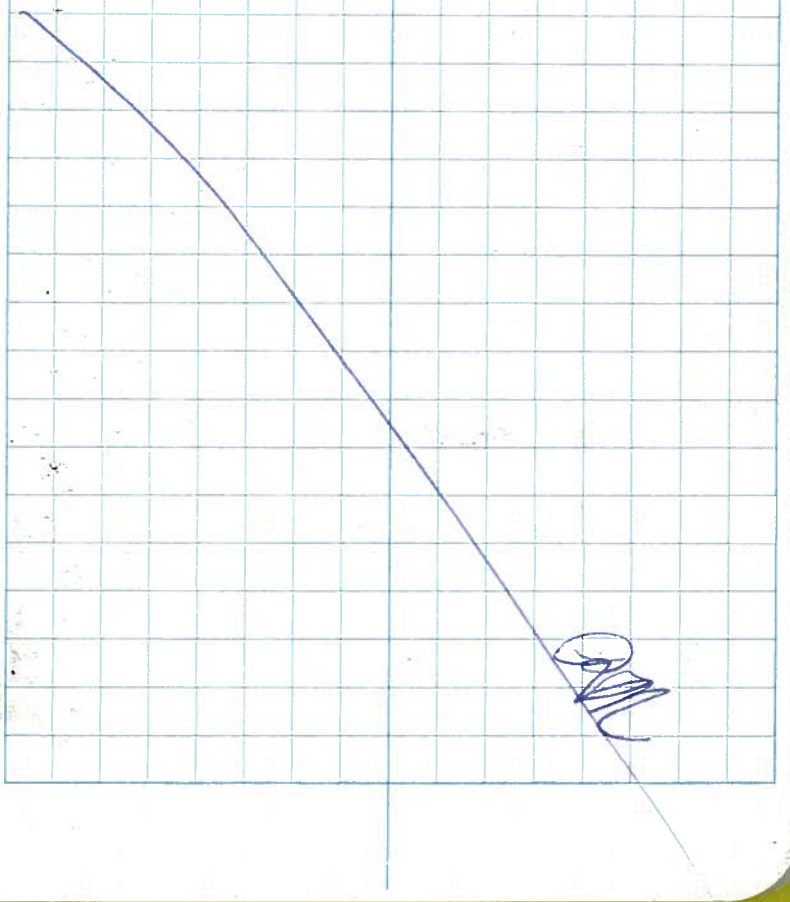
FTSW-HR-SO-47 @ 1730

Bias # 4
on slope of ground scar

1' of peat ~ other organic light grey w/ some white Sand. loose

FTSW-HR-SO-48 @ 1740

Bias # 12



Point in middle of rusted metal chair (middle empty) no organic on top Dark grey Sandy Soil w/ some brown

Some to few roots

FTSW-HR-SO-49 @ 1750

1800 Rebekah M, Lynette B, + Steve Left HR site

1815 All back at hotel

Ft Stewart
8/2/12

645 Safety mtg at hotel
0715 Rebekah McCoy at Buddy B office building 1175 Division of Public Works O+M

He talked w/ willie and he will meet me at the gate to evans area wwtp at 10 am.

0740 Rebekah M. arrived at HR Conex

0910 Rebekah M Left HR conex headed to Evans Sampling area

0930 Arrived at Evans Sampling area Gate ~~had been~~ open but waited for Willie

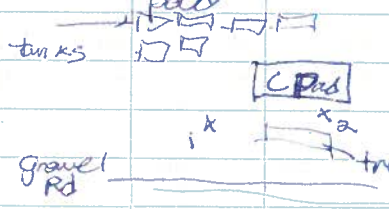
0935 Willie Joe met Rebekah at Gate entrance, entered with vehicles and took samples Sampling are from top of ww treatment pad (west) to gate entrance.

Background # 8

Dark brown sandy Soil w/ some (little) clay few roots, low grass cover at bottom of slope to treatment area. no odor.

FTSW-AA-So-30 @ 0943

Background # 9



at NE area of sampling area.

. Dark ~~Red~~dish brown sandy clay loam with some roots few roots On top of slope at very edge of sampling area

FTSW-AA-SO-31 @ 0955

1000 Left Evans area and headed back to cantonment area.

1025 At 1st sampling location next to tank field + concrete pad

Dark Reddish Brown sand w/ very little clay, few roots, no odor few ants & grubs

FTSW-AA50-32 @ 1034

1040 Completed Sampling Rebekah heading back to hotel

1050 Arrive at hotel

1145 Dropped off samples at FedEx location

1155 RM Back at hotel

Ft. Stewart

8/3/12 overcast, hot, humid
