

MEDICAL SIMULATION TRAINING CENTER

Mission:

To provide state of the art medical training that ensures a highly educated, innovative, and adaptive medical and non-medical Soldier.

Vision:

Be the Army's premier pre-hospital medical training center where Soldiers can learn and sustain the most up to date life saving techniques

Scope:

To provide training for medical and non-medical personnel, with priority given to deploying units. Courses facilitated include: TC 8-800, Tactical Combat Casualty Care (TCCC), Basic Life Support (BLS), Combat Lifesaver (CLS) Course, and Improved First Aid Kit (IFAK) Familiarization.

Intense Trauma Training

The Fort Stewart MSTC provides comprehensive training in several formats: the classroom setting, practical hands-on training, simulation, trauma lanes and distance learning.

Our Staff combines the expertise of 68W Combat veterans with the experience of instructors who have prepared thousands of Soldiers for deployment

Latest Innovations in Simulator Technology

MSTC is a leader in the pursuit of technologies and innovative training techniques that transform the Combat Medic training experience.

Realistic Combat Trauma Scenarios and Simulations:

Our cutting edge high definition/fidelity simulators combined with state-of-the-art wound replicas are designed for optimal performance in military casualty lanes training and battle drills.

TC 8-800 (Target, 68W):

TC 8-800 Medical Education & Demonstration of Individual Competence (MEDIC) is a 48hr, 9 day course that includes Tables I-VII and skills validation (Table VIII). These are individual tasks and skills used for treating patients in medical and military environments. Completing tables I-VII provides the 68W with 48 hours toward NREMT re-certification. This combined with Table VIII testing (ACMS-VT) meets The Surgeon General of the Army's intent.

Combat Lifesaver (CLS) Course (Target, 1 Soldier per squad/team):

This 4 day course serves as a bridge between the self-aid/buddy aid training given to all Soldiers, and the medical training given to the combat medic. The CLS is a non-medical Soldier who provides lifesaving measures as his primary mission allows, who can assist the medic in providing care and preparing casualties for evacuation.

Basic Life Support (BLS):

This course is designed to provide the skills to sustain life until more advanced lifesaving measures are available. Certification is a 6 hour course and covers adult and child CPR, adult and child 2-rescuer CPR, bag-valve mask technique, choking, automated external defibrillation (AED), special situations, rescue breathing, and stroke.

Tactical Combat Casualty Care (TC3) Course (Target, all Soldiers E1-08):

This 16hr, 2 day course addresses the unique focus and approach to the combat trauma patient. TC3 guidelines recognize that patient care in the tactical environment has 3 goals; treating the casualties, preventing additional casualties, and completing the mission. This course is available to all military, Law Enforcement, Fire Department, and EMS personnel.

Improved First Aid Kit (IFAK) Familiarization:

This 4hr course is designed to familiarize every Soldier with the purpose and contents of the IFAK, and train the Soldier on when and how to use each of the items contained in the IFAK.

Phase II of the Fort Stewart MSTC will include an Outdoor MOUT

Our focus is on generating relevant, realistic casualty scenarios that fit the Contemporary Operating Environment and present a rigorous challenge to the Combat Medic.
