US Army Chemical School*

To support training for the NBC Reconnaissance (ASI L5) course, the US Army Chemical School will receive two complete mock-ups of the M93 Fox reconnaissance vehicle. The mock-ups will be installed in Faith Wing of Sibert Hall. The training facility will be called the "Fox's Den."

The computer-driven simulators will be sufficient to train 24 reconnaissance personnel in individual/crew tasks prior to actual vehicle operations. A complete laboratory is also being installed to support the use of simulants and to recycle the MM-1 sampler wheels.

Separate classrooms with MM-1 mass spectrometers and VOS-25 land navigation systems are being furnished for intensive hands-on training.

The Fox simulators will be installed in the Fox's Den during first quarter FY92 and the facility will be fully operational the second quarter, FY92.
